NOTE

Section 119 of The Loan and Trust Corporations Act (R.S.O. 1927, Chapter 223) provides as follows:—

> 119.—(1) No corporation shall, under the penalty of becoming disentitled to registry or of having its registry suspended or cancelled, make, print, publish, circulate, authorize, or be a party or privy to the making, printing, publishing, or circulating of any statement or representation that its solvency or financial standing is vouched for by the Registrar or that the publication of its statement in his report is a warranty or representation of the solvency of the corporation, or of the truth or accuracy of such statement in any particular.

ONTARIO

DEPARTMENT OF INSURANCE

To The Honourable William H. Price, K.C., M.P.P.,
Minister in Charge of the Department.

Sir:

I have the honour to submit herewith the Thirty-sixth Annual Report of the Registrar of Loan Corporations of Ontario upon the affairs of all registered Loan Corporations, Loaning Land Corporations, and Trust Companies doing business in Ontario for the year 1933 (business of 1932). The statements included in this report are arranged alphabetically according to the classes of corporations defined by the Act, namely, Loan Corporations, Loaning Land Corporations, and Trust Companies. In addition there are certain statistical tables, tabulated summaries and comparative statements more fully described in the Table of Contents.

The report shows the financial condition of these corporations as taken from their annual statements filed with the Department on or before the last day of February, 1933, in respect of their business for the preceding calendar year with such adjustments and corrections necessary to secure uniformity and comply with the provisions of the Act, together with such further changes as upon inspection of the corporation's books and records would appear to show more clearly the true and correct financial condition of each corporation. The Department, however, does not assume responsibility for the correctness of the figures submitted.

REGISTRY CHANGES

I have the following changes to report:

By Order-in-Council dated 20th June, 1933, the Lieutenant-Governor in Council formally approved the acceptance of the Brockville Trust and Savings Company by the Supreme Court as a trust company for the purposes of such courts in Ontario.

By Order-in-Council dated 4th July, 1933, the Honourable the Lieutenant-Governor of the Province of Ontario formally approved the reduction of the amount required to be held on deposit by the Department of Insurance in respect of The Prudential Trust Company, Limited, from Fifty Thousand Dollars ($50,000.00) to Thirty Thousand Dollars ($30,000.00).

REVIEW OF 1932 BUSINESS

Introduction

The following is a brief resume of the operations of Loan and Trust Corporations for the year 1932 as indicated by the increase or decrease of assets, in total and individually, over that period, together with fluctuation in net profits and dividends. In perusing the subsequent comments, it should be borne in mind that the main sources of loan and trust company funds, outside of the sale of capital stock and net profits, are sale of debentures and receipts of funds on deposit in respect of loan corporations, and sale of general and specific guaranteed fund investment receipts and receipt of moneys on deposit in respect of trust companies.

Loan Corporations

Total assets of loan corporations decreased during 1932 from $239,900,000 to $233,000,000. More than half this reduction of assets is reflected in the contraction of the deposit and debenture liabilities of such corporations, the former being reduced by the amount of $1,500,000 and the latter by $2,100,000. The debenture reduction of $2,100,000 consisted of a decrease in debentures payable in Canada of *$1,500,000 and in debentures payable elsewhere than in Canada of *$600,000. It would appear that the reduction in debentures payable in Canada and in deposits can be directly attributed to the necessity which most corporations faced of meeting the public's demand for cash. In view of the present conditions, this demand was anticipated, since it is an expected consequence of prolonged periods of depression that the public will eventually be forced to draw on savings and investments to maintain its standard of living. It has been suggested that the number of government bonds available to the investing public at attractive prices constituted an additional motive for withdrawal of funds. No doubt this is true to some extent, but its influence in 1932 as compared to 1931 appears to have been overestimated.

The decrease of $600,000 in debentures payable elsewhere than in Canada would seem to indicate that the demand for cash, noted above, was more or less world wide. However, in respect of foreign investors, certain factors were operative to counteract this withdrawal of funds, the most important of these, from the debenture holders' viewpoint, being the then existing discount on sterling. From the corporations' viewpoint, new money could not be brought out to Canada because of the sterling discount, but on the other hand, there was no difficulty in renewing existing sterling obligations at low rates of interest. Therefore, instead of taking the profits on exchange by remitting funds from Canada to pay up maturities, corporations preferred to maintain their liquid position in Canada and renew their commitments abroad.

The other half of the $6,900,000 reduction in assets as indicated by corresponding liabilities was the result of liquidating bank loans to the extent of $1,100,000, sundry liabilities to the extent of $275,000, coupled with a shrinkage in surplus of $500,000 and reduction in capital of $1,500,000, partially offset in total by an increase in investment reserves of $150,000. These reductions include the withdrawal of the Canadian Mortgage Investment Company with assets totalling $1,250,000, capital stock $1,245,000 and sundry liabilities of $5,000.

---

*The inconsistency of these decreases with those shown in the Registrar's Annual Reports of 1931 and 1932 is due to the fact that in 1931 $3,500,000 of debentures payable in Canada were reported to this department in error as debentures payable elsewhere than in Canada but correctly reported in 1932. Therefore, in calculating the decrease, the necessary correction was taken into consideration.

Although difficult to draw conclusions therefrom, it is of interest to note the average total assets of loan corporations for the past few years. They are as follows: 1926, $6,690,000; 1927, $7,825,000; 1928, $9,000,000; 1929, $9,700,000; 1930, $10,700,000; 1931, $11,995,000; 1932, $12,200,000. In view of the fact that assets of all loan corporations as a total have not shown a corresponding increase (but rather a decrease in latter years), the obvious conclusion is, of course, that the number of corporations is decreasing. This is borne out by the records of the department which show that a considerable number of loan corporations have been converted into trust companies, some absorbed by other loan corporations and another voluntarily wound up.

Trust Companies

Trust company assets exclusive of those held for estates, trusts and agencies, which for the ten years prior to 1931 showed a steady increase, have now for the second successive year decreased. Company fund assets show a shrinkage from $59,700,000 to $57,700,000 and guaranteed funds from $136,700,000 to $129,400,000. The total of these assets, $187,200,000, is $9,200,000 below that for 1931, which in turn was $1,500,000 below that of the previous year.

The reduction in company funds of trust companies of $2,000,000 arises from the liquidation of bank loans to the extent of $1,000,000 and other liabilities of $300,000, coupled with a decrease in surplus and reserve of $2,000,000, and the whole offset by an increase in investment reserves of $1,100,000 and in capital of $100,000. Obviously, the $2,000,000 reduction in surplus reflects a reduction in asset values during the year plus or minus profit or loss experienced on operations.

The reduction in guaranteed fund assets of trust companies is recorded as made up of a decrease in specific guaranteed investments and in general guaranteed investments of $4,000,000 and $5,000,000 respectively, offset by an increase in deposits of $2,800,000. These figures, however, do not reflect the true change inasmuch as $2,800,000 of money reported as on deposit (the exact amount of the increase in deposits) had formerly been reported to the Department incorrectly as general guaranteed funds. A correct statement of the movement of these funds which occurred during the year, therefore, shows decreases in specific and general guaranteed funds of $4,000,000 and $3,100,000 respectively with no change in deposits.

As suggested above with regard to public borrowings of "Loan Corporations," I have no doubt that this contraction of funds is due largely to withdrawals by investors to "carry on during the depression," augmented to some extent by withdrawals for the purpose of investment in higher yielding securities such as government bonds.

Estates, Trusts and Agency Funds

Estates, trusts and agency funds of trust companies again show an increase. This year, it is $96,000,000 and brings the total of all such funds well over the two billion dollar mark. This most important department of trust companies' activities has shown a steady growth since its inception, although the rate of increase has dropped considerably in the past two years. Increases during 1928 to 1932 were $226,000,000, $361,000,000, $240,000,000, $93,000,000 and $96,000,000. In noting that the increase has not been as great this year as in former years, I may say that it is generally the opinion that there has been no material decrease in the number of estates, trusts or agencies accepted by trust companies although the average size of such estates, trusts, etc., has shown a substantial shrinkage. As stated in my previous reports, the advantages of corporate trusteeship offered by trust companies are becoming more and more recognized by the public and the services more widely used.

Mortgage Loans

Evidence of the prolonged period of economic stress is reflected in the decline of the principal asset of loan and trust corporations—mortgages. Loan corporation mortgages decreased $5,000,000 and trust company mortgages $3,200,000, the latter figure representing a decrease in company fund mortgages of $1,400,000 and in guaranteed fund mortgages of $1,800,000. It should be observed also that the above decrease is based on a mortgage asset which includes interest due and unpaid. As such interest outstanding has increased by two millions over the previous year, it is evident the decrease in mortgage principal was actually ten millions and not eight millions.

For more than two years, companies generally have been conserving their liquid funds and only a very few lending on real estate. Four factors are outstanding in the recent downward trend of mortgages. First, the determination of most companies to build up and maintain a high percentage of liquid assets, secondly, the fact that a considerable percentage of mortgages have fallen into arrears and have acted as a deterrent to further loaning, thirdly, and partially as a result of the other two, government and municipal bonds have become preferred investments in so far as many recent issues have been available at prices calculated to give attractive yields. There is a fourth factor that is outstanding in the downward trend of mortgages, namely, the enactment of debt adjustment legislation and moratoria which is having the effect of causing money to seek other channels of investment.

While the foregoing paragraph explains the absence of natural increases, the contraction in the total of mortgages is found to be due partly to transfers to real estate where legal proceedings were necessary to preserve the security held and partly to repayments of principal and partly to the reduction of the asset by means of write-offs. The second mentioned reason, namely, actual repayment of principal, should afford considerable satisfaction in so far as it is an indication of the number of people who are able to meet their capital obligations notwithstanding the depression.

It is interesting to note that the greatest decrease in mortgage principal (exclusive of interest due and accrued) occurring during the year was in eastern mortgages. This is a complete reversal of the trend experienced at the beginning of the period of depression. In the years 1930 and 1931, mortgages in eastern Canada increased two and a half millions and three and a half millions respectively, but in 1932 decreased approximately eight to nine millions. In 1930 and 1931, western loans increased* three and a half millions and a half million respectively and decreased two millions in 1932. It is apparent, therefore, that the curtailment of loans on real estate did not occur in eastern Canada until some two years after such a curtailment had evidenced itself in the west. However, when economic conditions did begin to influence the eastern mortgage situation, the effect was more rapid and severe than was experienced by western loans earlier in the period of stress. The explanation is not only that the east was slower to feel the depression but also that there was debt adjustment legislation in effect in the western provinces in earlier years, but it was not until 1932 that a moratorium was enacted in any eastern province.

---

*Unnatural increases in western loans during 1930 have been eliminated from this figure for comparative purposes. Such increases arose from the registry of The Northern Trust Company of Winnipeg, the assets of which included western loans to the amount of $2,800,000, and secondly, the purchase by the London and Western Trusts Company of London, Ontario, of the Standard Trust Company of Winnipeg. The latter's assets including western mortgages totalling $800,000 net.

Interest due and charged but unpaid is in a general way indicative of the condition of mortgage loans. Such interest outstanding on western mortgages has almost quadrupled in the past three years. At the end of 1929, the total was $1,890,000, at the end of 1930, $3,700,000, at the end of 1931, $5,620,000 and in 1932, it increased to $7,200,000. This represents 8.06% of total western mortgage principal outstanding on December 31, 1932, as compared to 6.08% at the end of 1931. Mortgage interest outstanding on eastern loans increased during 1932 by $600,000 to stand at $2,000,000 at the end of the year. This amount represents 1.18% of eastern mortgage principal outstanding as compared to .77% in 1931. It should be specially noted that these figures do not include interest accrued nor interest due and not charged.

Office Premises

Office premises of loan companies remained constant at $7,900,000 and trust company premises declined by $200,000 to the figure of $5,800,000. The decrease in the latter figure is directly attributable to write-offs or the setting up of investment reserves in respect of this asset.

Real Estate

As has been often stated, the relative amount of real estate on hand is indicative of a loan or trust corporation's affairs. Real estate held for sale is acquired only in protection of mortgage investments and is not permitted as a direct investment except to loaning land corporations. This year, despite the moratorium on mortgage principal and despite the companies' own attempts to avoid proceedings wherever possible, real estate on hand has increased by $2,400,000, $1,000,000 being reported by loan corporations and $1,400,000 by trust companies. This makes a total increase in the past two years of three and a half millions, bringing loan company real estate up to $3,200,000 and trust company real estate to $4,200,000. The latter figure represents 7.32% of company fund assets of trust companies and the former 1.37% of loan corporations' assets.

Collateral Loans

The trend of collateral loans coincides almost exactly (a short time lag intervening) with the trend of business and security values. Statistics of past depressions bear out this point, and the present period of economic stress exemplifies even more strongly the relation of the two. In 1931, the reduction in collateral loans for both loan and trust corporations was $29,200,000. In 1932, a still further decrease is noted of $5,400,000, divided as to loan corporations —$1,000,000, company funds of trust companies—$1,000,000 and guaranteed funds of trust companies—$3,400,000. These reductions bring the total of loan corporations' collateral loans to $798,294.93, those of company funds of trust companies to $2,790,322.17 and of guaranteed funds of trust companies to $22,300,988.72. Obviously, in a period of depreciating values companies are forced to seek additional collateral for such loans. When this is not forthcoming partial repayment must be pressed or collateral realized upon.

In company funds of trust companies, it is interesting to note that while collateral loans have shown a drop of approximately 53% in the last two years, the earnings on such loans have not decreased proportionately, namely, by only 7%. The conclusion may be that one or two of the larger companies have developed a considerable short term business in collateral loaning.

Bonds and Debentures

Trustee securities, which include government, government guaranteed, municipal, and rural telephone bonds, remained stationary during 1932 for both loan corporations and trust companies. Totals as at the end of that period were—Loan corporations, $16,300,000; company funds of trust companies, $8,600,000; and guaranteed funds of trust companies, $22,200,000. No doubt the same motives which prompted the marked increase in this asset during 1931 were still operating to maintain it during 1932. These bonds represent liquid assets as defined by The Loan and Trust Corporations Act and as such are preferable holdings. Obviously, securities composing this asset under normal circumstances would be conserved over a period of time and not liquidated except in emergency.

Bonds, other than trustee securities, remained practically the same in respect of trust companies, but loan corporation holdings declined $1,800,000.

Stocks

Stocks held show but a slight decrease from the fifteen and a half millions held as at December 31st, 1931. Trust company holdings remained at the same figure while those of loan corporations decreased $100,000.

Cash

While loan corporations and company funds of trust companies show an increase in cash on hand and on deposit of $400,000 and $200,000, respectively, cash of guaranteed funds of trust companies has decreased to the extent of $1,800,000 as might be expected to meet withdrawal by those investors in guaranteed securities of trust companies who desire their money for other purposes.

Other Assets

Other assets of loan corporations dropped $300,000 and of company funds of trust companies $100,000. Other assets of guaranteed funds of trust companies remained approximately the same as in 1931.

Earnings

Disregarding for the moment transfers to investment reserves which in the Report are shown as charged to expenditure, trust companies in 1931 reported a decline in earnings of approximately $500,000 while loan corporations held steady. In 1932, however, both loan corporations and trust companies reported decreases of $550,000 and $700,000 respectively, reducing loan corporations' earnings to $4,400,000 and trust companies' earnings to $2,570,000.

This decrease in profits was to be expected in view of the existing conditions and was the result of a shrinkage in practically every source of income, offset to some extent by a decrease in expenditure. It would appear, therefore, that disregarding investment reserve appropriations and amounts written off, loan and trust corporations have done remarkably well considering present economic conditions.

In 1932, loan and trust corporations, and in particular the latter, adopted a policy of precautionary entrenchment. This extremely commendable policy has taken the form of setting up large investment reserves (chargeable against expenditure, but eliminated in the above comments for purposes of comparison) to take care of current and future depreciation in asset values. In 1932, $3,000,000 was set-up in this manner as compared to $1,500,000 in 1931.

Dividends

Dividends of loan corporations totalled $4,200,000 or 6.73% of the shareholders' investment therein. Net earnings on the same basis represented 7.08%. Similarly, earnings of trust companies totalled $2,570,000 or 5.58% of shareholders' investment while 4.90% was declared in dividends. It must be borne in mind that the above calculations make no provision for investment reserve appropriations.

General Remarks

The loan and trust corporations are to be particularly commended on their efforts to increase the percentage of liquidity during the last three years. As at December 31st, 1929, the percentage of liquid assets, as defined by The Loan and Trust Corporations Act, to deposits (all companies) was 38.27. In 1930, the percentage increased to 56.05 and in 1931 to 57.63. As at the end of 1932, it was 60.70%.

Although the department has been handicapped in the inspection of loan corporations and trust companies for a number of years past through lack of sufficient staff, it was found necessary to transfer Inspector Sheppard to other duties early in the year 1933. The department was fortunate in securing the services of Mr. E. A. Fluker to replace Inspector Sheppard and in spite of increased demands upon inspectors' time in the supervision of companies during a difficult year, a greater number of inspections have been made in 1933 than in 1932. While section 148, subsection (1) of The Loan and Trust Corporations Act requires that the Registrar or a qualified member of his staff visit the head office of each registered corporation at least once annually, it has been impossible to inspect every such corporation for the reasons stated. Nevertheless, the great majority of Ontario incorporated corporations have been examined, the annual statements of all registered corporations have been carefully audited and numerous conferences have been held by the Chief Inspector with company executives. In the result, and subject to the foregoing, this Report is presented with reasonable assurance that it shows the true and correct financial condition of each corporation, subject to the explanatory and other notes included following the statements of individual corporations.

With a view to economy in the operation of the Department, quarterly summaries of guaranteed funds of trust companies and of liquid securities available for the depositors of corporations accepting deposits have not been printed and distributed in 1933 as in former years. For the same reason, the Abstract of the Registrar's Annual Report was not issued and distributed. All of the information contained in such summaries and Abstract is, however, included in this Annual Report.

All of which is respectfully submitted.

R. LEIGHTON FOSTER,
Registrar of Loan Corporations.

Toronto, Ontario,
December 1st, 1933.

Principal	$ 76,081 04
Interest	8,966 14

CONSTATING INSTRUMENTS

This corporation was incorporated under Special Act of the Dominion of Canada, 62-63 Victoria (1899), c. 101, under the name of "The Canada Permanent and Western Canada Mortgage Corporation," for the purpose of acquiring the assets and business of the Canada Permanent Loan and Savings Company, the Western Canada Loan and Savings Company, the Freehold Loan and Savings Company, and The London and Ontario Investment Company, Limited, which several purchases were confirmed by Special Act of Ontario, 63 Victoria, 1900, c. 129. The name was changed to the "Canada Permanent Mortgage Corporation" by 3 Edward VII (1903), c. 94 (D), which Act also amended its lending powers. By 3-4 George V (1913), c. 86 (D), further amendments were made to the Incorporating Act.

Of the constituent companies, the Canada Permanent Loan and Savings Company was incorporated by declaration filed under The Building Societies Act (Cons. Stat. U.C., c. 53) in 1855, under the name of the Canada Permanent Building and Savings Society, which name was

CANADA PERMANENT MORTGAGE CORPORATION—Continued

changed to the Canada Permanent Loan and Savings Company by 37 Victoria (Ontario), 1874, c. 100.

The Western Canada Loan and Savings Company was also incorporated by declaration filed under The Building Societies Act in 1863, under the name of the Western Canada Permanent Building and Savings Society, and its name was changed to the Western Canada Loan and Savings Company by 37 Victoria (Ontario), 1874, c. 79.

The Freehold Loan and Savings Company was also incorporated by declaration filed under The Building Societies Act in 1859 under the name of The Freehold Permanent Building and Savings Society; the name being changed to The Freehold Loan and Savings Company by 36 Victoria (Ontario), (1873), c. 104.

The London and Ontario Investment Company was incorporated by the Act of Ontario, 39 Victoria, 1876, c. 62.

In 1918 the corporation purchased the assets and business of The Oxford Permanent Loan and Savings Society, which purchase was ratified by Order-in-Council of Ontario, dated July 31st, 1918, pursuant to The Loan and Trust Corporations Act.

In 1921, the corporation also purchased the assets and business of The London and Canadian Loan and Agency Company, Limited, which purchase was ratified by Order-in-Council of Ontario, dated September 23rd, 1921, pursuant to The Loan and Trust Corporations Act.

In 1927 the corporation purchased the assets and business of The Royal Loan and Savings Company, which purchase was ratified by Order-in-Council of Ontario, dated March 4th, 1927, pursuant to The Loan and Trust Corporations Act.

In 1927 the corporation purchased the assets and business of The British Columbia Permanent Loan Company, Vancouver, B.C.

In 1927 the corporation also purchased the assets and business of The Canada Landed and National Investment Company, Limited, which purchase was ratified by Order-in-Council of Ontario, dated December 30th, 1927, pursuant to The Loan and Trust Corporations Act.

		$ 672,971 52

9. Amount of interest permanently capitalized during the year, $3,030.40.

CONSTATING INSTRUMENTS

1884—Letters Patent (under the Ontario Government Joint Stock Companies' Letters Patent Act), incorporating The Central Canada Loan and Savings Company of Ontario, with a capital of $2,000,000, in 20,000 shares of $100 each, dated 7th March, 1884.

1890—Act (of the Legislature of the Province of Ontario), 53 Vic., c. 129; declares capital to be $5,000,000, in 50,000 shares of $100 each; confirms the purchase of the assets of the Peterborough Real Estate Investment Company, Limited; authorizes the issue of debenture stock; authorizes agencies in the United Kingdom; defines the limit of borrowing powers.

1893—Supplementary Letters Patent (of the Province of Ontario), dated 8th June, 1893, extending the Company's purchasing and lending powers with regard to bonds, stocks and debentures to the Province of Manitoba.

1896—Act (of the Legislature of the Province of Manitoba), 59 Vic., c. 33, authorizes Company to exercise in the Province of Manitoba, with respect to real and personal property, all the rights, powers and privileges that it possesses in Ontario.

1897—Supplementary Letters Patent (of Ontario), dated 6th May, 1897, amending the original Letters Patent by expunging therefrom powers of Company to buy and sell land.

1898—Act (of the Parliament of the Dominion of Canada), 61 Vic., c. 97.

1899—Act (of the Legislature of the Province of Manitoba) authorizing Dominion Company to exercise in Manitoba all its rights, powers and privileges; defining the powers of the Company and vesting all the assets of the old company in the new company.

1900—Act (of the Legislature of the Province of Ontario), confirming and validating the conveyance and assignment of 1st December, 1898 (see form of the conveyance and assignment in schedule to 61 Vic., c. 97), and transferring and vesting the assets of the Provincial Company in the Dominion Company.

THE LAMBTON LOAN AND INVESTMENT COMPANY—Continued

CONSTATING INSTRUMENTS

Incorporated under The Building Societies Act, 9 Vict., c. 90 (Province of Canada), by declaration filed on 27th March, 1847, with the Clerk of the Peace for the Western District. The original corporate name was "The Port Sarnia Building Society." The society was reorganized as "The Lambton Permanent Building and Investment Society" under the said Act and other Acts, all of which became consolidated as Chapter 53 of the Consolidated Statutes of Upper Canada, by declaration filed 19th June, 1855, with the Clerk of the Peace for the County of Lambton. This latter corporate name was changed by Order-in-Council, 4th June, 1880, to The Lambton Loan and Investment Company.

The lending and the borrowing powers are governed by The Loan and Trust Corporations Act, R.S.O. 1927, c. 223.

9. Amount of interest permanently capitalized during the year		677 04
10. Amount of Company's own Debentures and interest thereon, due and unpaid.		34,586 20

CONSTATING INSTRUMENTS

Incorporated under The Building Societies Act, Consolidated Statutes of Upper Canada, c. 53, by declaration filed in the office of the Clerk of the Peace for the County of Middlesex, 26th September, 1870. The original corporate name was The Ontario Savings and Investment Society.

By Order-in-Council of Ontario, dated 4th October, 1879, and also by Order-in-Council of Canada, dated 29th October, 1879, the corporate name was changed to The Ontario Loan and Debenture Company.

The Company as now constituted was formed under the provisions of The Loan Corporations Act of Ontario by The Ontario Loan and Debenture Company, taking in by amalgamation the Agricultural Savings and Loan Company under Order-in-Council, dated 10th November, 1911, and operates under The Loan and Trust Corporations Act, R.S.O. 1927, chapter 223.

By Order-in-Council of Ontario, dated 12th March, 1930, 20,000 shares twenty per cent. called and paid were converted into 4,000 shares fully paid, authorized capital thereby being reduced from 100,000 to 84,000 shares.

CONSTATING INSTRUMENTS

Incorporated under The Building Societies Act (R.S.O. 1877, c. 164), by declaration filed with the Clerk of the Peace for the County of York, 17th September, 1879, with the corporate name of the Real Estate Loan and Debenture Company. Decl. Book II, p. 57.

Letters patent of Canada (6th April, 1883) incorporating the Company under The Canada Joint Stock Companies Act, 1877, with the corporate name of The Real Estate Loan Company of Canada, Limited.—Lib. 85, folio 282, Office of the Registrar-General of Canada. The capital authorized by this instrument was $2,000,000, being the capital of the said The Real Estate Loan and Debenture Company, with the same powers throughout Canada as now possessed by the said The Real Estate Loan and Debenture Company, and for the same purposes and objects, subject always to the provisions of the said last mentioned Act (Canada J. S. Co's. Act, 1877), and with all such further powers, purposes and objects as are conferred upon Loan Companies incorporated under the provisions of the said last mentioned Act.

1884. Act of the Dominion of Canada, 47 V. c. 101 (D), respecting sales of assets.

Supplementary Letters Patent of Canada, 20th June, 1892, reciting By-law No. 62 of the Company, and (as therein provided), reducing the capital stock from $2,000,000 to $1,600,000.

1913. Act of the Dominion of Canada, 3-4 George V, c. 184, increasing capital stock to $2,000,000 in shares of $100 each par value.

CONSTATING INSTRUMENTS

Incorporated under The Building Societies Act (Consol. Stat. U.C., c. 53), by declaration, dated 12th March, 1870, and filed with the Clerk of the Peace for the County of Lincoln on the 21st March, 1870. The original corporate name was The Security Permanent Building and Savings Society of St. Catharines.

The corporate name was changed to The Security Loan and Savings Company, St. Catharines, in 1876 by 39 Vic., c. 64 (D); and also by Order-in-Council of Ontario, dated 18th August, 1876.

The authorized Capital Stock was increased from $300,000 to $500,000 on the 29th June, 1911. This increase was approved of by Order-in-Council of Ontario, dated 12th July. 1911.

The authorized Capital Stock was further increased from $500,000 to $1000,000 on the 9th March, 1916. This increase was approved of by Order-in-Council of Ontario, dated 14th March, 1926.

The lending and the borrowing powers of the Company are governed by The Loan and Trust Corporations Act, R.S.O. 1927, Chap. 223.

		$ 365,434 24

CONSTATING INSTRUMENTS

Incorporated as "The Toronto Real Estate Investment Company" by Letters Patent of Ontario (June 15th, 1885), issued under The Ontario Joint Stock Companies' Letters Patent Act, R.S.O. 1877, c. 150. Supplementary Letters Patent of Ontario (December 29th, 1887), were issued under R.S.O. 1887, c. 157, defining the borrowing powers, etc. Further Supplementary Letters Patent of Ontario (September 25th, 1889) were issued under the last mentioned Act, increasing the capital stock from $400,000 to $2,000,000. Further Supplementary Letters Patent of Ontario (March 30th, 1891) were issued under the same Act, conferring agency powers on the Company. The corporate name was by Order-in-Council (April 2nd, 1891) changed to "The Toronto Savings and Loan Company."

For the lending and borrowing powers, see the Letters Patent and the Acts, R.S.O. 1877, chap. 150; R.S.O. 1887, c. 157; R.S.O. 1914, chap. 184; R.S.O. 1927, chap. 223.

CONSTATING INSTRUMENTS

Incorporated 20th May, 1905, by special Act of the Legislature of Quebec, 5 Edward VII, chap. 78.

Amendments to charter, 9 Edward VII, chap. 114, 7th May, 1909; 5th George V, chap. 125, 5th March, 1915; 7th George V, chap. 102, 22nd December, 1916; 9th George V, chap. 125, 4th March, 1919.

Authorized by special Act of the Legislature of Ontario, 10-11 Geo. V, chap. 156, 4th June, 1920, to transact business therein as specified in Section 5 of the said Act, which enacts as follows:

> "(5) The company shall be limited in respect of all business relating to property and civil rights or provincial objects in the Province of Ontario, to the powers mentioned in the schedule to The Loan and Trust Corporations Act, and shall be subject to the general provisions of the said Act and of the general public law of the said Province relating to trust companies and trusts."

The company has a deposit in the Province of Ontario amounting to $200,000.00

		$ 9,149 43

CONSTATING INSTRUMENTS

The British Mortgage Loan Company of Ontario was incorporated by Letters Patent of Ontario, dated October 5th, 1877 (Lib. 5, No. 52), issued under R.S.O. 1877, c. 150, which Act was continued by R.S.O. 1887, c. 157, and was as to Loan Corporations superseded by 60 Vic., c. 38 (O), now R.S.O. 1927, c. 223.

By 16 George V, c. 121, the Company was given trust company powers and its name changed to The British Mortgage and Trust Corporation of Ontario.

The lending and the borrowing powers of the Company are derived from its Letters Patent and the above public general statute.

CONSTATING INSTRUMENTS

Incorporated by declaration filed May 11th, 1885, with the Clerk of the Peace for the United Counties of Leeds and Grenville. The declaration was made by virtue of "The Building Societies Act," R.S.O. 1877, c. 164, continued by R.S.O. 1887, c. 169, and superseded by 60 Vic., c. 38 (O), now R.S.O. 1897, c. 205. See R.S.O. 1927, c. 223.

The lending and borrowing powers are derived from the above public General Acts.

By a Special Act of the Legislature of Ontario, 18 Geo. V, c. 130, the Company was granted the powers of a trust company and its authorized capital stock was increased from $500,000 to $1,000,000. Its name was changed to The Brockville Trust and Savings Company.

		$ 211,150 93

CONSTATING INSTRUMENTS

The Canada Permanent Trust Company was incorporated in 1913 by a Special Act of the Parliament of the Dominion of Canada, 3-4 Geo. V, c. 87.

Authorized by Order-in-Council (May 7th, 1913), to carry on business in the Province of Ontario as a Trust Company, pursuant to the provisions of The Loan and Trust Corporations Act, R.S.O. 1927, c. 223.

In 1927 the Company purchased the assets and business of The Brantford Trust Company, which purchase was ratified by Order-in-Council of Ontario, dated 31st day of August, 1927, pursuant to The Loan and Trust Corporations Act.

MISCELLANEOUS

1. Officers of the Corporation who are under bond for the following amounts, respectively: Estates Officer, $10,000.00; General Manager, $10,000.00; Secretary, $10,000.00.

2. Dividends and bonuses declared during year giving (a) dates declared; (b) dates payable; (c) rates: (a) November 19th, 1931; February 25th, 1932; May 19th, 1932; September 15th, 1932. (b) January 1st, 1932; April 1st, 1932; July 1st, 1932; October 1st, 1932. (c) 1½%; 1½%; 1½%; 1%, at the rate of 5½% per annum.

3. Date appointed for the Annual Meeting—February 17th, 1933. Date of last Annual Meeting—February 25th, 1932.

4. In the case of any Company whose Stocks, Bonds or Debentures are held by the Corporation either directly or indirectly, if such Company is otherwise indebted to the Corporation upon loans either secured by mortgages or other security, or unsecured, the aggregate amount of such loans is		$ 15,575 00
The aggregate amount of instalments of principal in arrears		1,375 00
The amount of interest due and unpaid, whether capitalized or not		405 00
The amount of interest on such loans taken credit for in the Profit and Loss Account during the year		968 82
5. Amount of actual cash receipts during the year (excluding Guaranteed and Trust Account receipts) for:		
(a) Interest on mortgages and agreements for sale	$ 12,343 66	
(b) Interest on loans on collateral security, including interest on advances	17,136 75	
(c) Interest on bonds and debentures	16,683 06	
(d) Dividends on stocks	923 90	
(e) Agency fees and commissions	205,646 67	
		252,734 04
6. Amount of interest permanently capitalized during the year		400 53
7. Amount belonging to Estates, Trusts and Agency Funds held on deposit in Guaranteed Funds Department		268,501 64

The Company has a certain contingent liability under its Guarantee of Titles to Land given when the Company was issuing Guarantee of Titles. This business was discontinued seventeen years ago and no claim has been made during that time, and the outstanding Guarantees of Titles are constantly diminishing in number through expiration.

The liability at the worst is only nominal.

CHARTERED TRUST AND EXECUTOR COMPANY—*Continued*

CONSTATING INSTRUMENTS

The Title and Trust Company was incorporated in 1905 by Special Act of the Parliament of Canada, 4-5 Edward VII, chap. 162 (Royal Assent, July 20th, 1905). By Section 19 of this Act the Company was required to make an initial deposit with the Receiver-General of Canada to carry on the business of Title Insurance, the said deposit to be increased to $75,000.00 within two years from the date of the issue of such license, and to be further increased as the Treasury Board may from time to time require.

In 1907, by Special Act of the Province of Ontario, 7 Edward VII, chap. 118, the Company was, upon the conditions therein specified, made admissible to registry under The Loan Corporations Act, and initial registry was granted on the 30th August, 1907.

April 18th, 1914—Amendment to charter changing name to Chartered Trust and Executor Company.

May 16th, 1919—Absorbed Guardian Trust Company.

May 1st, 1929—Special Act increasing capital from $1,000,000 to $2,500,000.

November 12th, 1930—Absorbed Quebec Savings and Trust Company.

CONSTATING INSTRUMENTS

The Grey and Bruce Trust and Savings Company, cited 16 Geo. V (1926), c. 123. This Act confirms the amalgamation of The Grey and Bruce Loan Company and The Owen Sound Loan and Savings Company, and constitutes the amalgamated corporation a new corporation under the name of The Grey and Bruce Trust and Savings Company, with Head Office in the City of Owen Sound, and empowers the new corporation to carry on the business of a trust company under The Loan and Trust Corporations Act.

The Grey and Bruce Loan Company was incorporated under The Building Societies Act, R.S.O. 1887, c. 169, as a permanent building society under the name of The Owen Sound, Grey and Bruce Loan and Savings Company, by declaration filed with the Clerk of the Peace for the County of Grey, May 10th, 1889. The corporate name was by Order-in-Council of Ontario, September 15th, 1897, changed to The Grey and Bruce Loan Company.

The Owen Sound Loan and Savings Company was incorporated under The Building Societies Act, R.S.O. 1887, c. 169, by declaration filed with the Clerk of the Peace for the County of Grey on the 1st April, 1889.

CONSTATING INSTRUMENTS

Incorporated under the Building Societies Act, R.S.O. 1887, c. 169, by declaration filed with the Clerk of the Peace for the County of Lambton, 20th August, 1889.

By Order-in-Council approved March 6th, 1907, pursuant to the provisions of Section 4 (6), Cap. 27, 63 Victoria, the authorized capital stock of the Company was increased from $500,000.00 to $1,000,000.00.

By 18 George V, Chapter 112, the Company was given Trust Company powers and its name changed to The Industrial Mortgage and Trust Company.

The lending and borrowing powers are governed by The Loan and Trust Corporations Act, R.S.O. 1927, c. 223.

CONSTATING INSTRUMENTS

Incorporated on the 17th September, 1896, by Letters Patent of Ontario, issued under The Ontario Joint Stock Companies' Letters Patent Act, R.S.O. 1887, Chap. 157. See also The Loan and Trust Corporations Act, R.S.O. 1927, Chap. 223.

February 18th, 1929—Order-in-Council confirming By-law No. 14 of the Corporation to increase the capital stock from $500,000.00 to $1,000,000.00.

August 21st, 1929—Order-in-Council confirming By-law No. 18 of the Corporation to increase the capital stock from $1,000,000.00 to $5,000,000.00.

On the 10th day of September, 1929, His Honour the Lieutenant-Governor approved by Order-in-Council the removal of the Head Office of The London and Western Trusts Company, Limited, from the City of London to the City of Toronto.

By an agreement, dated the 15th day of October, 1929, The London and Western Trusts Company, Limited, of London, Ontario, purchased the assets and liabilities, business, rights, property and goodwill, etc., of The Standard Trusts Company with Head Office in Toronto, Ontario. The agreement was ratified and confirmed by the shareholders of both companies and was subsequently approved by the Lieutenant-Governor in Council. The transfer became effective of the 18th day of December, 1929. The Standard Trusts Company had, by authority of By-law No. 35, moved its Head Office from Winnipeg to Toronto, and was granted registry in Ontario under date of October 26th, 1929.

CONSTATING INSTRUMENTS

The Montreal Trust Company was incorporated on the 21st day of March, 1889, by Special Act of the Province of Quebec, 52 Vic., c. 72 (Q) and the following subsequent special amending Acts 54 Vic., c. 75, 55-56 Vic., c. 78, and 63 Vic., c. 77.

By Special Acts the name was changed in 1895 to The Montreal Trust and Deposit Company, 59 Vic., c. 70 (Q), and again in 1909 to the Montreal Trust Company, 9 Edw. VII, c. 115 (Q).

Authorized by Order-in-Council to carry on business in the Province of Ontario as from the 11th day of March, 1909, subject to certain conditions and limitations.

Registered in the Trust Companies Register, January 21st, 1913.

By Order-in-Council, dated February 25th, 1928, the Capital Stock was increased from $1,000,000.00 to $2,000,000.00.

The Company has a deposit with the Province of Ontario amounting to $200,000.00.

PRUDENTIAL TRUST COMPANY, LIMITED—Continued

CONSTATING INSTRUMENTS

The Prudential Trust Company, Limited, was incorporated in 1909 by a Special Act of the Parliament of the Dominion of Canada, 8-9 Edward VII, Chapter 124.

Authorized in 1911 by Special Act of the Legislature, 1 Geo. V, Chapter 139, to transact business in the Province of Ontario as specified in Section 1 (5) of the said Act, which enacts as follows:

> "(5) The Company shall be limited in respect of all business relating to property, rights or interests in the Province of Ontario, to the powers mentioned in this Act or granted from time to time to trust companies by any Public Act or Order of the Lieutenant-Governor in Council of the said Province and shall be subject to the general public law of the said Province relating to trust companies and trusts."

The Company has a deposit in the Province of Ontario amounting to *$50,000.00.

In 1922, by Chap. 71, George V, 12-13, the authorized capital was increased from $1,500,000 to $2,000,000 representing 20,000 shares of par value $100.

In 1930, by Chap. 70, George V, 20-21, the capital structure was altered to represent 100,000 shares of stock with a par value of $20 a share.

**Under the provisions of 1 Geo. V, c. 139, as amended by 10 Geo. V, c. 158, the desposit as security to do business in Ontario may be fixed from time to time by the Lieutenant-Governor in Council. By Order-in-Council, dated June 15th, 1920, the Company's deposit of $200,000 was exchanged for one of $50,000.00, the public liability in Ontario being at that time $1,123.43 on Trust Account and $26,167.14 of assets under administration.*

**By Order-in-Council dated 4th July, 1933, The Honourable the Lieutenant-Governor of the Province of Ontario formally approved the reduction of the amount required to be held on deposit by the Department of Insurance in respect of The Prudential Trust Company, Limited, from Fifty Thousand Dollars ($50,000.00) to Thirty Thousand Dollars ($30,000.C0).*

CONSTATING INSTRUMENTS

The Royal Trust Company was incorporated in 1892, by Special Act of the Province of Quebec, 55-56 Vict., chap. 79, which was amended by 55-56 Vict. (1892), chap. 80 (Q), and by 59 Vict. (1895), chap. 67 (Q), and by 63 Vict. (1900), chap. 76 (Q), 6 Edw. VII, chap 73, 17 Geo. V, chap. 147 (Q), 19 Geo. V, chap. 116 (Q).

Authorized by Special Act of the Legislature of Ontario, 2 Edw. VII, chap. 103, to transact business therein as specified in Section 1 (5) of the said Act, which enacts as follows:

> "(5) The Company shall be limited in respect to all business relating to property, rights or interests in the Province of Ontario, to the powers mentioned in the schedule to The Ontario Trusts Companies' Act, and shall be subject to the general provisions of the said Act and of the general law of the said Province relating to trust companies and trusts."

The Company has a deposit in the Province of Ontario amounting to $200,000.00.

CONSTATING INSTRUMENTS

Incorporated under The Building Societies Act, 1887, c. 169, as amended by 56 Vic., c. 31 (O), by declaration filed with the Clerk of the Peace for the County of Victoria, on the 4th September, 1897.

The operations of the Company were for a time by law restricted to the County of Victoria (56 Vic., c. 31), continued by R.S.O. 1897, c. 205, s. 8 (4); but the Company, having fulfilled the statutory requirements, was by Letters Patent of Ontario, bearing date 11th November, 1898, relieved from the above restriction of its operations.

By a special Act of the Legislature of Ontario, 13 Geo. V, c. 107, the Company was granted the powers of a trust company and the name was changed to The Victoria Trust and Savings Company. (See also The Loan and Trust Corporations Act, R.S.O., 1927 chap. 223.)

FILED BY

Loan and Trust Corporations

MARCH 31st, 1932, TO SEPTEMBER 30th, 1933, INCLUSIVE

Pursuant to Sections 45 or 18 a (3) of the Loan and Trust Corporations Act.

Sec. 45. Every loan company receiving deposits shall make a sworn return to the Registrar quarterly on the 15th days of January, April, July and October in each year, drawn in accordance with the form prescribed from time to time by the Registrar, showing the amount of such deposits and showing the amount of cash on hand and on deposit and the amount of debentures, bonds, stock or other securities of or guaranteed by the Dominion of Canada, and of or guaranteed by any province of Canada less any incumbrances thereon and the amount of bonds, debentures and other securities of any municipal corporation in Ontario or of any city in Canada, less any incumbrances thereon and the principal amount of any moneys payable to the company on demand the payment of which is secured by the mortgage or pledge of any of the securities hereinbefore in this section mentioned as the said amounts stood at the end of the last preceding month, and stating that the same were at the date mentioned in such return on hand and available for depositors.

Sec. 18a.—(3) Every trust company receiving deposits in the manner authorized by subsection 3 of section 18 shall make a sworn return to the Registrar quarterly on the 15th days of January, April, July and October in each year, drawn in accordance with the form prescribed from time to time by the Registrar, showing the amount of such deposits and showing the amount of cash on hand and on deposit, and the amount of debentures, bonds, stock or other securities of or guaranteed by the Dominion of Canada, and of or guaranteed by any province of Canada, less any incumbrances thereon, and the amount of bonds, debentures and other securities of any municipal corporation in Ontario or of any city in Canada, less any incumbrances thereon, and the principal amount of any moneys payable to the company on demand, the payment of which is secured by the mortgage or pledge of any of the securities herein before in this subsection mentioned, as the said amounts stood at the end of the last preceding month, and including in such statement all such cash and securities and loans as defined in this subsection, whether owned by the company or held by it as guaranteed investments under the provisions of subsection 2 of section 17, or subsection 4 of section 18, and stating that the same were at the date mentioned in such return on hand and available for depositors.

Securities Allocated

FILED BY

TRUST COMPANIES

MARCH 31st, 1932, TO SEPTEMBER 30th, 1933, INCLUSIVE

Pursuant to Section 18a (2) of the Loan and Trust Corporations Act.

Sec. 18a. (2) Every trust company receiving funds for guaranteed investment as mentioned in subsection 1 of section 16 shall make a sworn return to the Registrar quarterly on the 15th day of January, April, July and October in each year, drawn in accordance with the form prescribed from time to time by the Registrar, showing the amount of such funds, and showing all securities, including loans on securities, and cash, including money on deposit, ear-marked and definitely set aside as provided in subsection 2 of section 17, as the said amounts stood at the end of the last preceding month, and stating that the same were at the date mentioned in such return, so ear-marked and definitely set aside.

REPORT

OF THE

Minister of Public Works

FOR THE

PROVINCE OF ONTARIO

FOR THE

TWELVE MONTHS ENDING 31st OCTOBER

1932

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO

SESSIONAL PAPER No. 8, 1933

ONTARIO

TORONTO
Printed and Published by Herbert H. Ball, Printer to the King's Most Excellent Majesty
1933

To the
Right Honourable Colonel Herbert A. Bruce, R.A.M.C., M.D., F.R.C.S.
Lieutenant-Governor of the Province of Ontario.

May It Please Your Honour:

As required by law, I submit for the information of Your Honour and the Legislative Assembly, the Annual Report of the works under the control of the Public Works Department, comprising the reports of the Deputy Minister, the Architect and the Engineers for the twelve months ending the 31st of October, 1932.

Respectfully submitted,

J. D. Monteith,
Minister of Public Works and Labour.

Department of Public Works, Ontario,
Toronto, February 25th, 1933.

REPORT

OF THE

Deputy Minister of Public Works

HONOURABLE J. D. MONTEITH, M.D.,
Minister of Public Works.

SIR,—

I have the honour to submit a summary of the work performed by the Department of Public Works during the fiscal year ending October 31st, 1932.

All expenditures were scrutinized with a view to exercising the greatest economy with the result that the total expenditure for the year is $3,179,385.58, a reduction of $832,190.65 from the expenditure of 1931.

Parliament and Departmental Buildings.—The Speaker's Gallery in the Legislative Chamber was raised and an exit to the east provided. Additional seating accommodation for visitors was provided under the gallery. The boilers in the old boiler room were removed. In the interests of safety, all elevators not provided with interlocks were so equipped. Redecorating was carried out where required, some new electric fixtures installed and alterations made for rearranging rooms in various Departments.

The addition to the East Block was completed and occupied up to the Sixth floor. The building known as No. 7 Queen's Park was renovated and altered to suit the requirements of occupation for a Nurses' Training Faculty.

In the course of alterations at 110 University Avenue, new heating boilers were installed.

Maintenance and Repairs of Government Buildings.—Repairs and renewals required on Government Buildings were carried out.

Educational Buildings.—Repairs and maintenance required to the various buildings of the Department of Education were looked after.

Agricultural Buildings.—The new Administration Building at Ontario Agricultural College, Guelph, with the completion of section No. 3 is now finished and occupied. The system of service tunnels to the various buildings to supply water, steam heat and electricity, was considerably extended and alternating electric current supplied throughout. At Horticultural Experimental Station, Vinelands, also at Western Experimental Farm, Ridgetown, and Agricultural School, Kemptville, certain maintenance expenditures for minor repairs and painting were made.

Public Institutions.—At Ontario Hospital, Brockville, the Nurses' Residence was completed and occupied. At Ontario Hospital, Orillia, the new Girls' Dormitory Building was completed and is ready for occupation. While construction was commenced on a new barn to replace the one destroyed by fire. At Ontario Hospital, Penetanguishene, the Building for the Criminally Insane was completed. At Ontario Hospital, Woodstock, the Laundry Building was completed.

At Industrial Farm, Burwash, work was commenced on the construction of a new cell block.

Engineer's Report.—During the year 150 bridges were constructed, of which 38 were built of concrete, 46 of timber, 11 of steel and 55 metal pipes.

As a measure of economy, the dredge was not operated during the season of navigation.

Drainage Aid.—Sixteen municipal drainage works were inspected and statutory grants paid.

The report on contractors for materials and works during the year is included.

The Accountant's report gives the cost in detail of the expenditure by the Department of Public Works during the year and the following is a summary of expenditures:

Main Office:		
Salaries, contingencies		$77,760 33
Government Buildings:		
Maintenance and Repairs		583,066 18
Public Buildings:		
Parliament Buildings, Hospitals, Schools, Court Houses, etc.		2,224,103 39
Public Works:		
Locks, dams, bridges, etc.		169,075 99
Drainage Aid:		
Aid to Municipalities		98,143 00
Special Warrants:		
Payment of Portrait, Hon. Wm. Donald Ross, Lieutenant-Governor of Ontario	$5,000 00	
Construction of Boys' Camp, Lake Couchiching	427 12	
To pay for Provisions, Government House	278 97	
Ontario Hospital, Orillia, Reconstruction of Barns destroyed by fire	19,497 58	
		25,203 67
Statutory:		
Minister's salary		10,000 00
		$3,187,352 56
Less salary assessment		7,966 98
Total expenditure, Department of Public Works		$3,179,385 58

I have the honour to be,

Sir,

Your obedient servant,

GEO. HOGARTH,
Deputy Minister of Public Works.

Toronto, February 25th, 1933.

HON. J. D. MONTEITH, M.D.,
Minister of Public Works and Labour.

SIR,—

I have the honour to report on the work done by the Architect's Branch of the Department of Public Works for the year ending October 31st, 1932.

Government House.—The buildings have been kept in good repair and sections of corroded hot water circulating pipes have been renewed in brass.

Parliament Buildings.—The buildings, including Parliament Buildings, East Block, Nos. 1, 5 and 15 Queen's Park, 110 University Avenue, Highways and Provincial Police Garages, have been kept in good repair.

The Speaker's gallery in the Legislature has been raised and remodelled and an additional exit on the east side has been added. Permanent staging, giving additional accommodation for visitors on the floor of the House, has been provided under the gallery.

The work of dismantling the old boiler room to provide additional vault accommodation was begun and the old boilers have been removed.

No. 2 Committee Room has been decorated and completely re-furnished and new electric fixtures have been installed.

With the changing around of various Departments, several alterations have been made and decorating of several offices has been done. The buildings, externally, have been repointed and renewal of gutters and flashings have been made.

Interlocks have been installed on all the old elevators.

The addition to the East Block, begun in December, 1930, has been completed. With the exception of the tower, the offices throughout have been occupied. The tower has been finished externally, with the exception of the carving of the sculptured figures. The design and carving of the figures are the work of Mr. Chas. Adamson, Sculptor, of Toronto. There are four seated female figures, approximately 8 feet high on the corners of the structure at the sixteenth floor, representing the virtues of the Province, namely: Justice, Wisdom, Power, and Toleration. At the twelfth floor level are eight male figures standing, also approximately 8 feet high, representing the various activities of Governmental Departments, namely: On the north, Mining and Labour; on the east, Education and Law; on the south, Health and Finance, and on the west, Forestry and Agriculture.

The Archives of Ontario will occupy the 10th to the 16th floors, inclusive, of the tower. The 15th floor will be treated as a gallery room for the display of old historic prints. From this room access is made to the observation outside balconies of the tower.

Special provision has been made in the new section of the East Block facing Surrey Place to house the Department of Mines cable testing machine, which is capable of developing a breaking strain of one million pounds. This machine was manufactured and installed by Messrs. W. & T. Avery, Limited, of London, England.

No. 7 Queen's Park. This building has been completely overhauled, repaired, rewired and redecorated throughout and connected up with the central heating plant of the East Block, to be used as a home for Nurses in Training. The building has been completely refurnished throughout.

No. 5 Queen's Park. A new laboratory in connection with Criminology has been established in this building.

No. 39 Queen's Park. The house over the Garage at the rear of this property has been repaired and redecorated as a house for one of the chauffeurs.

No. 43 Queen's Park. The Department of Welfare, which formerly occupied this building has been moved to the East Block and this property is now occupied by the Ontario Foundation Research.

No. 110 University Avenue. New heating boilers have been installed and alterations begun to provide additional accommodation for the Ontario Savings Office Branch, situated in this building.

Osgoode Hall.—This building has been kept in good repair. Some external painting has been done in the northeast court. Rooms in the basement have been altered and fitted up for storage of documents. Repairs have been made to roofs and down pipes. Considerable repairs have been made to plastering and interior painting has been carried on.

EDUCATIONAL BUILDINGS

General repairs and painting have been done as required to the Normal and Model School, Toronto. The outside steps have been renewed and the central hall has been painted at the Normal School, London. Changes were made to the thermostat control and one boiler was retubed at the Normal School, North Bay. Renewal of flush tanks was made at the Stratford Normal School. Boiler tubes have been renewed at the English-French Training School, Sturgeon Falls. Repairs have been made to the Engineer's cottage damaged by fire and minor repairs to the boiler and hot water supply have been made at the Ontario School for the Deaf, Belleville. Additional installation of auricular appliances for the Deaf has been done and the room acoustically treated for sound conditions. Minor repairs have been made to the roofs and to the Superintendent's house at the School for the Blind, Brantford. External painting has been done to all the buildings, including School buildings and barn and the water tower and general repairs to roofs and plastering at the Northern Academy, Monteith. Repairs have been made to roof and pointing of the stone work of copings at the Technical Teachers' Training College, Hamilton.

A number of plans have been issued to school inspectors to assist rural school boards.

AGRICULTURAL BUILDINGS

Ontario Agricultural College, Guelph.—Section No. 3 of the New Administration Building and Students' residence has been completed and furnished and is now occupied. This completes the group of buildings described in the Architect's report for 1929. The formal opening ceremony was performed by His Excellency, Lord Bessborough, Governor-General of Canada.

The work of extending service tunnels to take water, steam heating and electric services has been carried on to the Dairy Building and to Macdonald

Hall. The roof of the tunnels forms sidewalks and are arranged to work in with the general scheme of the campus design.

The electric mains have been further extended to change over some sections from direct current to a uniform alternating current system throughout the College Buildings.

The Massey Library building has been rewired and changed to alternating current and fitted with new electric fixtures.

Horticultural Experimental Station, Vinelands.—Minor repairs have been made to buildings as required.

Western Experimental Farm, Ridgetown.—Repairs have been made to Superintendent's residence and cellar walls have been underpinned. The barns have been painted externally, including metal shingle roofs.

Agricultural School, Kemptville.—Painting of all barns has been done. Repairs and alterations have been made to Engineer's house and minor repairs to boilers have also been done.

PUBLIC INSTITUTIONS

Ontario Hospital, Brockville.—The new residence for nurses has been completed and furnished and is now occupied. Work is being done in the laying out of the grounds and enclosing fences and sidewalks in the neighbourhood of the residence, by day labour for the relief of the unemployed. The description of this building was given in the Architect's report of 1931.

Ontario Hospital, Hamilton.—The work of grading and sidewalks has been completed in connection with the new Assembly Hall. The description of this building was also given in the Architect's report of 1931.

Ontario Hospital, Orillia.—The new Dormitory Building for Girls has been completed and furnished and is ready for occupation. The finished grading around this building has been done by day labour for the relief of the unemployed. The changes to the heating plant to take care of the new buildings have also been completed. Changes have been completed to the electric system by installing transformers at the boiler house to replace outside overhead transformers on poles. The pole line from the west, which formerly carried the service to the Institution is now used only to feed from the meter at the Power House to the water supply pump house and farm buildings. The pole line coming in from Orillia on the west side of the Barrie road now carries the service to the Institution. A cable has been taken under Barrie road into the transformer room and all feeders to new cottages are in tunnels. The pole line to pump house has been rebuilt to avoid the former close proximity to the barns.

A new barn and cow stable with silos is under construction. The contract for the silos, which are to be of reinforced concrete, was awarded to E. Webb & Sons of Orillia. The contract for the barn was awarded to M. H. Braden of Orillia. The Beattie Bros. of Fergus are the sub-contractors supplying the stable fittings.

The barn is a structure of frame on a foundation of concrete. The main section is 70 feet by 40 feet with a stable in the lower part for bull and calves and isolation stalls, and over this a hay mow with a sloping gangway approach built of reinforced concrete. Under this gangway is the root house, the walls and roof of which have cork insulation. Immediately behind the main barn are the feed room with the silos with feed chopping floor and grain storage on the floor above. Behind this in turn is the cow barn, giving accommodation of 72 stalls. The fittings are of the modern sanitary type. Above is a storage loft. The milk house is separated from the barn by a covered way and contains cooling room, washing and sterilizing room and lavatory for staff. The walls and floors of this milk house are of prison-made red quarry tile. The buildings are electrically lighted, for which Ritchie & Mould are the contractors.

Ontario Hospital, Penetanguishene.—The building for the Criminally Insane has been completed, with the exception of the installation of intercommunicating telephone system and ground lighting. All furniture and kitchen equipment has been delivered. The furniture, including beds, mattresses and blankets, chairs, benches and tables were supplied by the Central Prison Industries at the Guelph Reformatory. The cabinet and other medical appliances were supplied by Ingram & Bell, of Toronto. The work on the electric cables was done by the Art Electric Co. The work of the steam mains and trenches was done by day labour for the relief of the unemployed. This building was described in the Architect's report of 1931.

Ontario Hospital, Woodstock.—The work of the laundry building has been completed, with the exception of the laying out of the grounds surrounding it and is now in operation. The building has been equipped with modern machinery. The lower storey of the building is fitted up as a general store for the institution.

Further draining has been done to the grounds at the new building to take care of surface water which lies there after heavy rains.

Girls' Training School, Galt.—Contracts have been awarded for the buildings required in connection with a Girls' new Training School. The buildings under construction are the school building, two dormitory buildings and an administration building.

The School Building has been planned to take care of future extension. The present accommodation consists of an Assembly Hall, four standard class rooms, two smaller class rooms, Principal's office, Teachers' room and small Library. One of the class rooms will be fitted up for Domestic Science, one for Sewing and one for Commercial work and two for ordinary class work.

Two Dormitory Buildings: The number of girls in each dormitory will be twenty-five, each girl occupying a separate bedroom. In addition to these rooms there are dining room with kitchen and pantries, living room, Superintendent's sitting room and bedroom, two supervisors' bedrooms, linen rooms and lavatory and bathroom. The construction is fireproof throughout. All corridor, kitchen, dining room and living room floors are finished in terrazzo. All other floors are concrete with linoleum finish and base and border of painted cement. The exterior walls are of tapestry brick in English bond on a cut stone base of Queenstone limestone. The roofs are slated. The interior trim throughout is of Ontario birch.

The Administration Building serves the needs as a reception building and medical examination building and office and is two stories in height. The accommodation on the first floor consists of public office, Superintendent's private office, Doctor's office, Dispensary and Examination room and a Dentist's office. On the second floor, the accommodation provides a ward of four beds and two single bed wards, a nurses' room, diet kitchen, bathroom and linen room. The construction is as described for the Dormitory buildings.

All buildings are heated from the central heating plant, already built and described in the Architect's report of 1931. The trenches for piping between buildings are of concrete and tops form the side walks between buildings.

Considerable grading has been done to the grounds and the digging of all trenches for heating mains has been done by day labour under a scheme of unemployment relief.

The following is a list of the contractors:

School Building	General Contractor	G. H. Thomas & Son, Galt.
	Heating	B. J. Miller & Co., Toronto.
	Plumbing	Orillia Heaters & Plumbers, Orillia.
	Electric Wiring	Standard Electric Co., Toronto.
Dormitory Buildings	General Contractor (A)	Schultz ConstructionCo., Brantford.
	Heating (A)	Wright Bros., Toronto.
	Plumbing (A)	P. Atkinson, Toronto.
	Wiring (A)	Art Electric Co., Toronto.
	General Contractor (B)	Schultz Construction Co., Brantford.
	Heating (B)	Wm. Stobbs, Toronto.
	Plumbing (B)	R. H. Ballantyne, Brantford.
	Wiring (B)	Sweitzer Electric, Kitchener.
Administration Building	General Contractor	Pounder Bros., Stratford.
	Heating	R. Fitzsimmons Co., Hamilton.
	Plumbing	Anguish & Whitfield, Brantford.
	Wiring	P. W. Wilson, Toronto.

Industrial Farm, Burwash.—Plans have been prepared and the work begun on a new cell block to house 168 prisoners. The building is 260 feet long by 40 feet wide and is three stories and basement in height. The foundation walls are of concrete, the upper walls of brick. The roof is a flat concrete roof finished with built up roofing. The cells are back to back with a utility corridor between, and face on to a corridor 6 feet 6 inches wide, which has barred windows to the outside. The cells are divided from each other by brick division walls and grilled in front with sliding doors. Each cell is provided with a toilet and wash hand basin and is furnished with a bed and a fixed seat and a metal table top and is well lighted. The floors are of concrete, painted. The walls are plastered. The cells are so arranged in groups to give segregation. Shower baths and lavatories are provided at the end of each group of cells. The basement is used only for pipe space and not for the use of prisoners. The whole of the work done has been by prison labour under the supervision of guards and under the general direction of a Departmental Superintendent of Construction.

DISTRICTS

The necessary repairs have been made to the Court Houses, Gaols and Registry Offices in the various Districts.

A concrete and brick veneered wall has been built at the new gaol, North Bay, to form a gaol yard for exercise of prisoners. The work was done by day labour to provide unemployment relief.

New vault accommodation for the Registrar has been provided at the Court House, Bracebridge.

The Mining Recorder's building at Sioux Lookout, described in the Architect's report of 1931, has been completed and is in occupation and the Mining Recorder has been moved from Pine Ridge.

The properties of the Children's Aid at Bon Air and 621 Jarvis Street have been kept in good repair.

The annual preparatory work and arranging for exhibits has been done at the Canadian National Exhibition.

Inspection has been made of the electrical equipment as required throughout the various buildings.

Inspection of steam heating plants and boilers throughout the various institutions and Normal Schools and court houses has been made and reported on.

I have the honour to be,
Sir,
Your obedient servant,
GEO. WHITE,
Assistant Architect.

Toronto, February 17, 1933.

HON. J. D. MONTEITH,
Minister of Public Works and Labour.

SIR,—

I have the honour to report on the work of the Engineer's Branch of the Department of Public Works for the year ending October 31st, 1932.

During the year, 150 municipal bridges were constructed at a cost of $95,304.00. They consist of 2 steel trusses, 7 steel beams, 38 concrete, 46 timber, 55 pipes and 2 old steel truss spans under which concrete foundations were built.

MAINTENANCE EXPENDITURE—1932

General, tools, repairs to equipment, etc.	$2,491 50	
Maintenance and operation of provincial dredge	2,915 74	
Storehouse at Bracebridge	49 00	
Clearing navigation channels	82 50	
Painting bridges	50 00	
		$5,588 74

REPAIRS AND LIGHTING LOCKS AND SWING BRIDGES

Port Carling lock and swing bridge	$906 93	
Magnetawan lock and swing bridge	30 90	
Huntsville lock and swing bridge	147 99	
Ryerson lock and swing bridge	4 60	
Port Sandfield lock and swing bridge	120 80	
		1,211 22

REPAIRS TO DAMS

Kashee Lake Dam, Muskoka	$539 76	
Monteith Dam	683 20	
Deer Lake Dam	71 05	
Tasso Lake and Camp Lake Dams	77 50	
Bala Dam	43 10	
Black River Dams	9 00	
Dollars Dam	121 46	
Baysville Dam	83 50	
Oxtongue Dam	15 00	
Creemore Dam	149 60	
		1,793 17

REPAIRS TO BRIDGES

Nipissing

Shelborne Creek bridge, Murchison	$24 40	
Wassa Creek bridge, Ferris	42 30	
Gauthier Creek bridge, Ferris	204 76	
McMaster Creek bridge, Murchison	204 45	
Depot Creek bridge, Chisholm	94 75	
Whitewater Creek bridge, Chisholm	43 54	
		614 20

Parry Sound

Blackstone Creek bridge, Conger	$297 18	
Tenth Concession bridge, Monteith	150 16	
Cherney bridge, Laurier	98 81	
Beaver Creek bridge, Proudfoot	74 40	
Clark Creek bridge, Bethune	124 61	
Whitestone bridge, McKenzie	17 00	
Squaw Lake bridge, Spence	85 80	
Stidler bridge, Hagerman	142 59	
Lount bridge	47 30	
Simpsons bridge, Bethune	100 40	
Commanda Creek bridge, Lount	101 75	
Nipissing Road bridge, Monteith	83 57	
Kearney bridge	204 20	
		1,527 77

Muskoka

Port Sydney bridge	$26 50	
Beaumaris bridge	63 80	
Oakley bridge	105.55	
Baysville bridge	58 26	
Black River bridge	43 35	
Ten Mile Creek bridge, Franklin	64 00	
		361 46

Haliburton

Burnt River bridge, Monmouth	$99 67	
Maple Creek bridge, Monmouth	203 45	
Pine River bridge, Guilford	75 34	
Lambs Creek bridge, Cardiff	100 83	
Monck Road bridge, Snowdon	207 50	
		686 79

North Hastings

Miller bridge, Dungannon	$204 30	
Papineau Creek bridge, Carlow	199 90	
		404 20

Addington

Stoney Creek bridge, Barrie	$36 75	
Sharbot Lake bridge	18 75	
Long Lake bridge, Barrie	45 90	
		101 40

Renfrew

Lyndock bridge	$50 50	
Colton Creek bridge, Mattawachan	95 07	
Combermere bridge	43 25	
Calabogie bridge	64 01	
Nineteenth Concession bridge, Raglan	49 80	
Round Lake bridge, Richards	45 50	
Bonnechere bridge, Richards	73 50	
Seers bridge, Alice-Petewawa townline	38 25	
		459 88

MUNICIPAL BRIDGES

NIPISSING

Astorville Culvert, Ferris.—A 6 x 5 ft. concrete culvert with clear roadway 18 ft. Approaches were graded.

Jones Creek Bridge, Lot 6 and 7, Con. 2, Calvin.—A concrete slab bridge with a clear span of 12 ft. and 16 ft. clear roadway. Approaches were graded and ½-inch cable guard railing provided.

Sixteenth Concession Bridge, Lot 25, Ferris. This is a timber bridge with a clear span of 8 ft. and roadway 16 ft. wide.

Tenth Concession Bridge, Lot 4, Chisholm. An 8 x 5 ft. concrete slab bridge with a 16 ft. clear roadway. It was built on the skew and provided with ½-inch cable guard railing.

Twelfth Concession Bridge, Lot 12, Chisholm.—An 8 x 5 ft. concrete slab bridge with 16 ft. clear roadway. Approaches graded and ½-inch cable guard railing provided.

Parry Sound

Broadbent Bridge, McKellar.—At this site, there was a 70 ft. steel span resting on rock-filled timber abutments. The timber had become badly decayed and the steel was beginning to settle. The old abutments were torn down to low water level and concrete abutments built from this up. The bridge originally had a plank floor on it. A reinforced concrete floor was put on, so that the maintenance cost of this bridge will be very small in the future. The steel bridge was also painted.

Christie Road Bridge, Foley.—This is a steel span 16 ft. long, 16 ft. clear roadway with a 3-inch plank floor. It rests on rock-filled timber abutments. It has a cable guard railing which extends out over the approaches.

Commanda Bridge, Gurd.—This is a timber bridge with a clear span of 20 ft. and rests on rock-filled timber abutments. It has a 16 ft. roadway.

Eleventh Concession Bridge, Lot 11, Humphrey.—This is a concrete slab bridge with a clear span of 15 ft. and roadway 16 ft. in clear width.

Forsyth Bridge, Lot 22, Con. 8, Christie.—A steel beam bridge 22 ft. long with a 16 ft. clear roadway. It rests on rock-filled timber abutments. It has a cable guard railing which extends out over the approaches.

Fourteenth Concession Bridge, Lot 25, Machar.—This is a 20 ft. clear span timber bridge with a roadway 14 ft. clear in width.

Hurdville Bridge, McKellar.—In 1920, two concrete beam spans of 20 ft. each were built at the south end of the bridge, but the north end of about 36 ft. was not rebuilt on account of the jack ladder and flumes leading to the mill just below the bridge. The bridge is built in connection with the dam, the piers extending above the bridge are provided with chaces in which stop logs are placed. The north end was rebuilt in concrete and consists of 2 spans, one 20 ft. long and one 10 ft. A new concrete pier and abutment were also built, so that the entire structure is now permanent.

Himsworth–Nipissing Townline Bridge.—This is a 12 ft. clear span timber bridge with a 14 ft. clear roadway.

Murphy's Bridge, Spence.—This is a reinforced concrete slab bridge with a clear span of 12 ft. and 16 ft. clear roadway.

McKeans Bridge, Lot 7, Concession 6 and 7, Strong.—This is a concrete beam bridge with a clear span of 25 ft. and 16 ft. clear roadway. The floor is 8 ft. above water level. The bridge was built on a new site and a new channel was cut to avoid a sharp elbow in the stream, so that the stream now crosses the road at right angles.

Morden's Bridge, Lot 30, Concession 4 and 5, Spence.—This is a concrete slab bridge with a clear span of 12 ft. and 16 ft. roadway. The bridge was built to the north of the old one in order to improve the approaches to it.

Seguin River Bridge, Spence.—This is a steel beam bridge 45 ft. long with a 16 ft. clear roadway. It has a plank floor which is 12 ft. above water level. It rests on rock-filled timber abutments. It has a cable railing which extends out over the approaches.

Sprucedale Bridge, McMurrich.—This is a steel beam bridge with a clear span of 12 ft. and rests on rock-filled timber abutments. It has a 16 ft. clear roadway and 3-inch plank floor. The cable guard railing extends out over the approaches.

Waubamic Bridge, Lot 11, Concession 12, McDougall.—This is a concrete beam bridge with a clear span of 20 ft. and 16 ft. clear roadway. The railing consists of steel posts and ½-inch guard rail cable which extends out over the approaches.

Yerkie's Bridge, Lot 21, Concession 6, Pringle. This is a timber bridge with a clear span of 20 ft. and 14 ft. roadway. About 60 ft. of the old bridge on the east end was filled in, making it permanent.

MUSKOKA

Beaumaris Bridge.—This is a timber trestle bridge 170 ft. long and the roadway was only 14 ft. wide. A new floor and railing was put on, two new lines of stringers added, one on each side and the roadway widened to 16 ft.

Brittania Culvert, Brunel.—This is a 4 ft. metal pipe, 20 ft. long. A diversion in the road was made at this site in order to straighten it and allow the creek to cross at a better angle.

Buck River Bridge, Lot 26, Concession 4, Stisted.—This is a concrete beam bridge with a clear span of 25 ft. It rests on concrete piles, having 4 piles 20 ft. long under each end. The old bridge at this site was about 50 ft. long and the balance of about 22 ft. was filled in and rip-rapped. Guard railings were placed on the approaches.

Cardwell Culverts (2), Lot 61, Concession A, and Lot 28, Concession 2.—Both culverts are concrete with clear openings 6 ft. wide and roadway 18 ft. clear width.

Enty's Culvert, Lot 11, Con. 8 and 9, Brunel.—This is a concrete culvert with a 5 ft. clear opening and roadway 18 ft. wide.

Fifth Concession Bridge, Lot 18, Oakley.—This is a concrete slab bridge with a clear span of 8 ft. and 16 ft. clear roadway. It has a cable guard railing which extends out over the approaches.

Fourth Concession Culvert, Lots 20 and 21, Draper.—A metal pipe 3 ft. in diameter and 50 ft. long was installed here. A fill 75 ft. long and 10 to 12 ft. high was made and a cable guard railing placed on each side.

Grey's Creek Bridge, Watt-Monck Townline.—This is a concrete slab bridge with a clear span of 10 ft. and is 10 ft. high. It has a roadway 16 ft. wide and a cable guard railing which extends out over the approaches.

Honey Harbour Culverts, Baxter.—Two metal pipes 12 in. in diameter and 24 ft. long each were installed here and approaches graded.

Medora Culverts (3)—Lot 18, Concession 1—a 4 ft. metal pipe, 24 ft. long.
Lot 21, Concession 2—a 4 ft. " " 14 ft. "
Lot 22, Concession 2—a 3 ft. " " 24 ft. "
The approaches were graded at each culvert.

Norway Point Bridge, Lot 4, Concession 11, Ridout.—This is a concrete beam bridge with a clear span of 35 ft. and roadway 24 ft. clear width. It was built on the skew. The railing consists of steel posts and steel guard rail cable which extends out over the approaches. The approaches were graded.

Tenth Concession Bridge, Lot 23, Stephenson.—A concrete slab culvert with 6 ft. clear opening and 18 ft. roadway is installed here.

All work in Muskoka was done under the supervision of Wm. Lowe.

EAST SIMCOE

Beard's Bridge, Lot 6 and 7, Concession 9, Medonte.—This is a concrete slab bridge with a clear span of 8 ft. and 16 ft. clear roadway. The railing consists of steel posts and ½-inch guard rail cable, which extends out over the approaches.

Beckett's Bridge, Lot 8, Concession 8, Tay.—This is a concrete beam bridge with a clear span of 25 ft. and roadway 16 ft. wide. The approaches are graded and provided with ½-inch cable guard railing.

Matchedash Culverts.—Seven metal pipes were installed, four 12 in. in diameter, 20 ft. long; two 15 in. in diameter, 20 ft. long; and one 18 in. in diameter, 20 ft. long. The approaches were graded at each culvert.

CENTRE SIMCOE

Willow Creek Bridge, Lot 16, Concession 4, Vespra.—This is a steel beam bridge with a clear span of 30 ft. and 16 ft. clear roadway. It rests on rock-filled timber abutments and has a 3 in. plank floor.

All work in both Simcoes was done by Amos Train.

HALIBURTON

Coulter Creek Bridge, Minden.—This is a timber bridge with a clear span of 8 ft. and 16 ft. roadway.

Dennison Creek Bridge, Minden.—This is a timber bridge with a clear span of 10 ft. and 14 ft. roadway.

Dorset Road Culverts.—Ten metal pipes 18 in. in diameter and 30 ft. long were placed in this road and approaches graded.

Eighth Line Bridge, Bexley.—This is a concrete slab bridge with a clear span of 12 ft. and roadway 18 ft. clear. Steel posts and ½ in. cable are used for a railing, the cable extending over the approaches.

Eighteenth Concession Bridge, Lot 27, Cardiff.—This is a 12 ft. timber bridge with a 14 ft. roadway.

Fletcher's Bridge, Lot 20, Concession 5, Eldon.—A metal pipe 3 ft. in diameter and 20 ft. long, was installed at this site.

Herron's Bridge, Lot 24, Concession 4, Eldon.—A new concrete deck was put on the old concrete abutments. It has a span of 14 ft. and roadway 14 ft. wide. Steel posts and ½-inch cable were used for railing.

Ingoldsby Bridge, Minden.—This is a timber bridge of 12 ft. span and 16 ft. roadway.

Mitchell's Creek Bridge, Minden.—This is a timber bridge of 8 ft. span and 16 ft. roadway.

Madill's Creek Bridge, Lot 21, Concession 6, Glamorgan.—This is a concrete slab bridge with clear span of 8 ft. and 16 ft. clear roadway. The railing consists of steel posts and ½-inch cable which extends out over the approaches. It is built on the skew.

McCue Bridge, Lot 5, Concession 8, Monmouth.—This is a concrete slab bridge with 8 ft. span and 16 ft. roadway. It has steel posts and cable railing extending over the approaches.

Monmouth Bridges (2).—These are timber bridges of 8 ft. clear span and roadway 16 ft. wide.

Moore's Falls bridge.—The old bridge at this site had a very sharp turn at each end and it was difficult to improve these approaches. As this is becoming a main highway, it was necessary to change the line of the bridge to improve the approaches. The line of the new bridge was swung about 45 degrees to bring it more in line with the road. This necessitated a much longer bridge, but made possible easy approaches at each end.

The bridge consists of 2 steel truss spans 60 ft. long each, resting on concrete abutments. The roadway is 18 ft. in clear width. The two spans are separated by a small island in the river. This required 2 abutments for each span and there was a heavy fill at each end of each span. Steel cable guard railing is provided and extends over the approaches and is continuous across the island.

Nesbitt's Bridge, Minden.—This is a timber bridge with a 12 ft. span and 16 ft. roadway.

Seventh Line Bridge, Lot 7, Laxton.—This is a concrete slab bridge with a clear span of 8 ft. and roadway 16 ft. wide. It has steel posts and cable guard railing which extends over the approaches.

Scotch Line Bridge, Anson.—This is a timber bridge with 10 ft. span and 16 ft. roadway.

School Bridge, Lot 25, Concession 21, Cardiff.—A 30-inch metal pipe, 30 ft. long was installed at this site. The approaches were graded and ½-inch steel cable guard railing provided.

Second Concession Culvert, Dalton.—A 2 ft. metal pipe 26 ft. long was installed here and approaches graded.

Third Line Bridge, Lot 13, Carden.—This is a concrete slab bridge with a clear span of 8 ft. and a 16 ft. roadway.

PETERBORO

Galway Culverts.—Five 15-inch metal culverts, 24 ft. long each, were installed in this township and the approaches graded.

North Hastings

Beaver Creek Bridge, Lot 1, Concession 7, Limerick.—This is a timber bridge with a clear span of 20 ft. and 14 ft. roadway.

Bentley Creek Bridge, Lot 17, Concession 16, Dungannon.—This is a timber bridge 32 ft. long, with a clear span of 20 ft.

Cole Creek Bridge, Lot 15, Concession 16, Mayo.—This is a concrete slab bridge with a clear span of 12 ft. and roadway 16 ft. wide. It has steel posts and steel guard railing, which extends over the approaches.

Forks Bridge, Lot 5, Concession 3, Wicklow.—The location of this bridge was changed by building it downstream in order to straighten the road and give a better location for the bridge. It consists of a concrete beam bridge with a clear span of 40 ft. and 16 ft. clear roadway. It has a concrete railing and the approaches are provided with steel cable guard railing.

Factory Hill Bridge, Lot 16, Concession 6, Bangor.—This bridge was built of timber having a 15 ft. clear span and 14 ft. roadway.

Keluskey's Bridge, Lot 10, Concession 12, Monteagle.—This is a timber bridge with a clear span of 16 ft. and 14 ft. roadway.

Lake St. Peter Bridge, Lot 8, Concession 9, McClure.—This timber bridge is 34 ft. long, having a clear span of 22 ft. and 14 ft. roadway.

Long Swamp Bridge, Lot 21, Concession 3, Marmora.—This is a timber bridge, 24 ft. long, with a clear span of 10 ft. and a 14 ft. roadway.

Loveless Bridge, Cashel.—This timber bridge is 22 ft. long, having a 10 ft. clear span and 14 ft. roadway.

Paudash Bridge, Faraday.—This bridge is 90 ft. long and consists of two spans, one 30 ft. and the other 36 ft. clear. Steel beams taken from Egan Creek bridge were used on the 30 ft. span and a timber queen truss was put on the 36 ft. span. The abutments and pier were renewed from low water level and the bridge raised 2 ft. 9 in. A 3-inch plank floor was put on.

Twin Sisters Bridge, Lot 29, Concession 3, Marmora.—This is a timber bridge with a clear span of 20 ft.

All work in this district was done under the supervision of W. E. Wiggins.

Addington

Brown's Creek Bridge, Lot 13, Abinger.—This is a concrete slab bridge with a clear span of 8 ft. and a 16 ft. roadway. The railing is steel posts and steel guard rail cable extending out over the approaches.

Cole's Bridge, Lot 5, Concession 2 and 3, Anglesea.—This is a concrete slab bridge, with 16 ft. clear roadway. The railing is steel posts and guard rail cable which extends over the approaches.

Fall River Bridge, Oso.—A timber bridge, 35 ft. long, was built here and the approaches filled for a distance of 150 ft.

Gin Creek Bridge, Lot 34, Concession 10, Ashby.—This is a concrete beam bridge with a clear span of 20 ft. and 16 ft. clear roadway. It has a railing of steel posts and steel guard rail cable which extends out over the approaches.

Hyde Creek Bridge, Lot 8, Concession 11, Denbigh.—This is a concrete slab bridge with a clear span of 12 ft. and roadway 16 ft. wide. It has steel posts and steel cable railing on the bridge and approaches.

Kingston Road Bridge, Lot 16, Concession 2, Sheffield.—This is a concrete slab bridge, 15 ft. clear span and 16 ft. roadway. The railing is steel posts and steel cable, the steel cable extending over the approaches.

Mississippi Bridge, Lot 10, Concession 10, Palmerston.—This bridge consists of an 80 ft. steel truss on concrete abutments. It has an 18 ft. clear roadway. The old bridge was 125 ft. long and the balance was filled in with rock. The old approaches were widened and steel cable guard railing provided for the entire approaches.

Mink Creek Bridge, Effingham.—A concrete culvert with a 5 x 5 ft. opening was put in at this site. The culvert is 30 ft. long, as there is a fill of 5 ft. above it. There was a fill about 90 ft. long on the approaches and it is provided with steel cable guard railing throughout.

Scoot River Bridge, Kaladar–Anglesea Boundary.—A steel beam bridge 25 ft. long was placed on the old concrete abutments. It has a 3-inch plank floor and 14 ft. roadway.

Scoot River Bridge, Lot 11, Concession 3, Kaladar.—A steel beam bridge 30 ft. long was placed on the old stone masonry abutments. It has a 3-inch plank floor and 14 ft. roadway.

All the bridges in this district were built under the supervision of W. W. Pringle.

SOUTH RENFREW

Byers Creek Bridge, Lot 29, Concession 6, Hagarty.—This is a timber bridge 20 ft. long and clear span of 12 ft.

Cole Creek Bridge, Lot 17, Concession 2 and 3, Hagarty.—This is a concrete slab bridge with a clear span of 6 ft. and 16 ft. roadway.

Doyle's Bridge, Brudenel.—A timber bridge with 8 ft. span and 14 ft. roadway.

Griffith–Mattawachan Culverts.—Six timber culverts 4 to 12 ft. spans.

Latchford Bridge, Raglan.—The old timber piers under this steel bridge had become rotten and unsafe. They were torn down to low water level and built up with concrete.

Raglan Culvert.—A timber bridge, 11 ft. clear span and 16 ft. roadway.

Sebastopol Culverts.—These consist of one timber span 20 ft. long and six small timber culverts.

Sherwood Culverts.—Five timber bridges of 10 to 14 ft. clear span and 16 ft. roadway.

Snake Creek Bridge, Raglan.—This timber bridge is 110 ft. long. New stringers, new floor and new railing were put on.

Third Concession Bridge, Lot 30, Adamston.—This is a concrete beam bridge with a clear span of 20 ft. and 16 ft. roadway.

The following metal pipes were installed:

Barry's Bay—a 21-inch pipe, 160 ft. long.

Blythfield—Lot 29, Concession 4, a 48-inch pipe, 24 ft. long.

Black Donald Road, Brougham, a 36-inch pipe, 20 ft. long, 24-inch pipe, 20 ft. long and 24-inch pipe 22 ft. long.

Brudenel-Killaloe Road, a 48-inch pipe, 20 ft. long.

Raglan Township—11 pipes, 12-inch to 36-inch in diameter.

Radcliffe—a 21-inch pipe, 20 ft. long, 2 pipes 12-inch by 20 ft. long and 21-inch pipe 30 ft. long.

NORTH RENFREW

Lake Dore Culvert.—This is a concrete slab bridge with 8 ft. clear span and 18 ft. roadway. It has steel cable guard rail on culvert and approaches.

Oelkies Bridge, Concession 6 and 7, Alice.—This is a timber bridge with a 20 ft. span.

Wilberforce.—Lot 9, Concession 5, a 30-inch metal pipe, 20 ft. long.
Lot 19, Concession 12, a 36-inch metal pipe, 20 ft. long.

All work in Renfrew was done under the supervision of Wm. Millar.

The lockmasters' reports on the traffic through the different locks were as follows:

	Steamers	Small boats	Scows	Rafts
Port Carling	1,249	1,094	271	2
Huntsville	22	343	..	54
Magnetawan	8	40	10	6

PUBLIC INSTITUTIONS

London Hospital Sewer Line.—Sewage from this hospital flows by gravity into a large, underground, concrete sewage tank, situated in the court-yard just north of the main building. From this tank it is pumped and distributed over plots to the north-west of the buildings where it is used as fertilizer for the plots.

This system caused considerable trouble and expense and it was decided to lay a sewer pipe from the building to the corner of Highbury and Dundas Streets, where connection could be made with the City of London sewers. The distance from the hospital to this corner is 2,500 feet. Ten-inch glazed tile was used and the joints cemented, except under the C.P. Railroad, where 10-inch cast iron pipe was used. The sewage flows by gravity to the London sewer. Seven manholes were installed along the line. They are of concrete and provided with cast iron covers.

The trench in which the pipe was laid had an average depth of about 12 feet reaching 15 feet at the deepest point and 14 feet under the C.P.R. tracks.

Most of the material excavated was very hard, having to be mostly picked, while dynamite was used in some places. Most of the trench had to be shored and at the lower end, water was encountered which had to be pumped.

The collector was remodelled and a new screen and stairway provided.

This work was done under unemployment relief, with Amos Train as foreman in charge.

The deep well pump at this institution was overhauled and put in proper running order.

Camp Schofield, Bowmanville.—A contract to drill a well at this camp was let to R. Ashton of Port Hope. The first well drilled did not yield a sufficient supply of water, so a second well was drilled. On testing this well, it did not supply enough water. It extended about 40 feet into rock and was encased to rock with a steel casing. Charges of dynamite were exploded in the rock, but this did not improve the supply. The steel casing was then lifted about 18 inches above the rock and a screen installed. When tested, the well gave 15 imperial gallons per minute. A small shelter was built above it on a concrete foundation. A deep well pump driven by a 3 horsepower electric motor with a galvanized pressure tank of 350 imperial gallons, was installed. The motor is automatically controlled by the pressure in the tank.

Burwash Industrial Farm.—It was decided to try drilling for a water supply for this institution. Mr. Geo. Graham, of Guelph, was given a contract to drill a 12-inch well, but his first attempt proved unsuccessful. He was then instructed to drill several smaller test wells and finally struck what appears to be a good supply at a depth of 79 feet. The last 17 feet of this depth is a good water-bearing gravel and Mr. Graham has been instructed to go ahead and enlarge this well to 12 inches in diameter and to develop it. The location of this well is quite close to the pumphouse which is a very favourable location. Should this well prove satisfactory, it will greatly improve the water supply at this institution.

Orillia Hospital.—At this institution, a new fire pump and also a new domestic pump were installed. The fire pump is gasoline driven, self-starting and the pump capacity 1,000 imperial gallons per minute. It is designed to pump against a head of 400 feet.

The domestic pump is electrically driven and has a capacity of 350 imperial gallons per minute. It has an automatic start and stop controlled by the height of the water in the tank.

MUNICIPAL DRAINAGE

From the fund provided for Municipal Drainage, drains were constructed in the different districts as follows:

Nipissing	50	drains
Parry Sound	17	"
Muskoka	15	"
East Simcoe	41	"
North Ontario	19	"
Haliburton	25	"
Peterboro	3	"
North Hastings	5	"
Addington	11	"
South Renfrew	13	"
North "	3	"

On this work, $22,707.69 was expended.

DRAINAGE AID

Black Creek Drain, Drummond Township, South Lanark

This drain was constructed by the Township of Drummond under the provisions of The Municipal Drainage Act and in accordance with plans, etc., prepared by J. H. Moore, O.L.S. and C.E. The engineer's report was adopted on February 25th, 1928, and the petition for aid was filed in this Department on April 4th, 1929.

This work consists of the main trunk channel and three branches which are also trunk channels, being parts of creeks, the main feeders of the main drain.

The main drain on Black Creek commences at the side road between lots 20 and 21 in the 5th concession of Drummond and runs east and south following the course of Black Creek to the Drummond-Elmsley townline at the centre of lot 23. Thence it continues south along the creek, through the township of Elmsley to the Rideau River, which is reached near the line between lots 5 and 6, in the 5th concession Elmsley. The length of the drain is 92,147 feet, about 17½ miles. The bottom width is 2½ feet at the head and gradually widens out to 24 feet bottom width at the outlet. The depth of cut ranges from 2 to 7 feet, with side slopes of 1½ to 1.

The east branch commences at the Drummond-Beckwith townline at the blind line of the 4th concession and runs south-west a distance of 5,524 feet, joining the main drain on lot 25 in the 3rd concession. The drain has a bottom width of 6 feet. The depth of cut ranges from 4 to 8 feet with side slopes of 1½ to 1.

Bell Creek, or branch No. 2 starts at the Drummond-Beckwith townline at the blind line of concession 2 and runs west and north to the main drain, a distance of 4,200 feet. The bottom width is 6 feet. Depth of cut ranges from 3½ to 5½ feet, with side slopes of 1½ to 1.

Tetlock Creek, or branch No. 4 starts at the west line of lot 23, in concession 3 and runs east along Tetlock Creek a distance of 2,629 feet, joining the main drain near the west line of lot 24, concession 3. The bottom width is 4 feet. Depth of cut ranges from 4 to 7½ feet, with side slopes of 1½ to 1. The total length of main drain and branches is 104,500 feet, nearly 20 miles.

The drainage area situated in four townships comprises 29,930 acres. A large quantity of rock excavation was encountered in North Elmsley, rendering the work very expensive. A number of the farms are assessed as high as $7.00 per acre. Withall, a large area of good land at present practically valueless, will be brought into production.

The estimated cost of the work complete was $101,604.50, which was assessed by the engineer on the lands and roads affected as follows:

On lands and roads in Drummond	$55,201 38
" " Beckwith	14,908 59
" " North Elmsley	28,440 69
" " Montague	3,053 84

The treasurer of the township of Drummond reports the total cost of the work at $105,819.02. Included in this amount are items of bank interest amounting to $619.26 which should be deducted, leaving the legitimate cost of the work at $105,199.76.

The main drain and the three branches are trunk channels within the meaning of the Act, costing more than $10,000.00 and are entitled to aid.

I examined the drain on August 18th, 1932, and found the work completed in a satisfactory manner.

On report, a grant of $21,040.00, being 20% of the cost of the drain, was paid to the township of Drummond, the initiating Municipality.

BURKE DRAINAGE REPAIR, 1930, HARWICH TOWNSHIP, EAST KENT

The drainage work is a pumping scheme located at Erieau. It was carried out by the township of Harwich under the provisions of the Municipal Drainage Act in accordance with the report and plans of W. G. McGeorge and G. A. McCubbin, Civil Engineers. The engineers' report was adopted on November 17th, 1930, and the petition for aid was filed in this Department on March 20th, 1931.

This drainage scheme was originally constructed in 1914 at a cost of $45,000.00. Between 1917 and 1921, repair work to the scheme was carried out at a further cost of $45,000.00. In 1929, extensive repairs were carried out at a cost of $66,913.62.

In the spring of 1930, while the water of Lake Erie was at an abnormally high level, a violent storm completely carried away a long section of the natural sand beach. Sections of the new banks and sheet piling were destroyed and the drainage area which had cost to that date $156,913.62 was completely submerged.

With assurance of substantial assistance from the Employment Relief Fund, the present repair work was undertaken by the township of Harwich. The high water of 1930 had destroyed about 3,000 feet of the original sand beach and carried away sections of the new dykes along Big Creek and the fourth concession road. A new sea wall was constructed for a length of 3,000 feet on the line of the old sand beach. The sea wall consists of a line of heavy white oak piles from 24 to 38 feet long, driven at 6-ft. centres. In front of the piles a line of 6x8-inch sheeting was driven. The sheeting was from 16 to 30 feet long. A double line of 4x6-inch waling was placed near the top of the sheet piles and was bolted to the anchor piles with ¾-inch bolts. Groynes 50 feet long of similar construction to the sea wall were driven at 50-ft. centres in front of the sea wall and perpendicular to it. The sea wall and groynes are expected to rebuild and hold in place the sand beach that was destroyed. On the internal dykes the sections that were washed out were rebuilt with clay hauled in from a pit. Some 2,700 feet of these banks were protected with sheet piling driven at the toe of the slopes.

The drainage area affected by this work consists of 1,351 acres of marsh or formerly submerged lands and 266 acres of higher ground yet too low for natural drainage.

The estimated cost of the present work was $100,000.00 of which amount $38,000.00 was assessed against the lands and roads affected in the township of Harwich. The total cost of the complete work as reported by the treasurer of Harwich was.. $112,500 87

The township received from the Unemployment Relief fund......................................	$50,000 00	
The township received from the Town of Erieau.....	12,000 00	
		62,000 00
Leaving a balance payable by the drainage area of.............		$50,500 87

I examined the drainage work on April 22nd, 1932, and found the work completed in a satisfactory manner. A fine onion crop was taken from the area in 1931 and the land is now being seeded for the 1932 onion crop. This drainage scheme is a work accomplished by embanking and pumping and costing more than $10,000 and is entitled to aid.

On report, a grant of $10,100, being 20% of the cost of the drain, was paid at the township of Harwich.

Cave Creek Drain, Nepean Township, Carleton

This drain was constructed by the township of Nepean under the provisions of The Municipal Drainage Act and in accordance with plans, etc., prepared by F. E. Patterson, Civil Engineer. The engineer's report was adopted on December 9th, 1931, and the petition for aid was filed in this Department on March 8th, 1932.

This drain starts at the line between the north and south halves of lot N, concession A, Rideau Front, on the west side of the road between concession A and B, Rideau Front. It runs north along the west side of the concession road to lot M. Thence northwest and northeast along Cave Creek to the west limit of the City of Ottawa, which is reached a short distance north of Carling Avenue. The length of the drain is 10,162 feet, about 2 miles. The drain has a bottom width of 3 feet at the head and gradually widens out to 6 feet bottom width at the outlet. The depth of cut ranges from 2½ to 5 feet and the side slopes are 1 to 1 throughout.

This drainage scheme was launched in 1923. A section of the township and the City of Ottawa was badly flooded by the waters brought down by the Creek. Threatened litigation delayed the work. In 1927, the township entered into an agreement with the City of Ottawa, under which the City agreed to construct the outlet, a covered concrete box drain and the township agreed to pay the City $17,300.00 for the use of the outlet in perpetuity. The agreement with the City was confirmed by legislation in 1927 by the Cave Creek Drain Act which authorized the township of Nepean to assess the cost of the Cave Creek Drain and the cost of the outlet in Ottawa on the lands and roads affected by the drain in the township of Nepean, under the provisions of The Municipal Drainage Act.

The treasurer of the township of Nepean reports the cost of the work including the outlet at $40,863.22.

I examined the drain on August 21st, 1931, and found the work completed in a satisfactory manner. This drain is a trunk channel costing more than $10,000 and is entitled to aid.

On report, a grant of $8,172.00, being 20% of the cost of the drain, was paid to the township of Nepean.

Dingman Creek Drain, Westminster Township, East Middlesex

This drain was constructed by the township of Westminster under the provisions of The Municipal Drainage Act and in accordance with plans, etc., prepared by F. W. Farncomb, O.L.S. and C.E. The engineer's report was adopted on March 16th, 1931, and the petition for aid was filed in this Department on August 5th, 1932.

A portion of the Dingman Creek in Westminster was opened up in 1930 under a drainage scheme known as the Hampton Drain. Under this scheme, certain long sections of the creek were not improved and the owners of the lands adjoining the unimproved sections were paid compensation for flooding rights. The outlet through the unimproved sections proved insufficient and the Drainage Referee, on application from dissatisfied owners, directed the municipality to furnish a sufficient outlet through the sections of the creek unimproved. Owners above the work of 1930 also asked to have the work extended upstream on Dingman Creek and on the Hampton Drain.

The main drain commences at the townline between Dorchester and Westminster in the south part of the second concession of the latter township. The work extends west along Dingman Creek a distance of 294 chains to the head of the 1930 work on lot 10 in the 3rd concession. The drain was improved in 1930 from lot 10 to 16. The work continues from the 15 and 16 sideroad, 304 chains west to the west part of lot 23, where improvements were made. Again the work continues from west of the East Talbot road westerly and northerly a distance of 260 chains to a point about one half a mile north of the Village of Lambeth, where a sufficient outlet is reached. The drain has a bottom width of 3 feet at the head and gradually widens to a bottom width of 25 feet at the outlet. The depth of cut varies from 2 to 6 feet with side slopes of one to one throughout.

The Hampton Drain branch which is also a trunk channel commences on lot 13 in the first concession and extends east and south along the old drain in a natural watercourse, a distance of 178 chains to the main drain which it reaches at the centre line of the third concession on lot 7. The drain has a bottom width of 2½ feet at the head and gradually widens to 5 feet at the outlet. The depth of cut varies from 3 to 7½ feet with side slopes of one to one throughout.

The estimated cost of the work was $33,131.50, which was assessed by the engineer on the lands and roads affected as follows:

On lands and roads in North Dorchester..................	$2,960 50
" " Westminster........................	30,171 50

I examined the drain on August 26th, 1932, and found the work completed in a workmanlike manner.

The township treasurer reports the total cost of the work at $22,408.41. Included in this amount are interest charges, $1,262.78 and estimated further legal fees of $75.00, in all $1,337.78, which should be deducted from the total cost, leaving the legitimate cost of the drain at $21,070.63. This drainage work consists of trunk channels costing more than $10,000 and is entitled to aid.

On report, a grant of $4,214, being 20% of the cost of the drain, was paid to the township of Westminster, the initiating municipality.

ELIMVALE DRAIN EXTENSION IN USBORNE, SOUTH HURON AND BIDDULPH, NORTH MIDDLESEX

This drain was constructed by the township of Usborne under the provisions of The Municipal Drainage Act and in accordance with plans, etc., prepared by John Roger, O.L.S. and C.E. The engineer's report was adopted on April 6th, 1929, and the petition for aid was filed in this Department on September 27th, 1929.

The drain starts at the line between lots 6 and 7 in the 5th concession of Usborne and runs south along a creek, a branch of the Aux Sable River, through the 5th concession to the Usborne–Biddulph townline, a distance of 12,485 feet. Thence it extends south through the 4th and 5th concessions of Biddulph, a distance of 16,815 feet to the south side of lot 14 in the 4th concession, where a sufficient outlet is reached. The total length of the drain is 29,300 feet or about 5½ miles.

The drain has a bottom width of 6 feet at the head and gradually widens out to a bottom width of 10 feet at the outlet. The depth of cut ranges from 4 to 10 feet with side slopes of 1 to 1 throughout. In the lower end of the drain, the excavation was practically all small boulders.

The estimated cost of the work was $14,837.00, which was assessed by the engineer on the lands and roads affected as follows:

On lands and roads in Usborne	$10,625 94
" " Biddulph	3,352 13
" " Blanchard	858 93

The work comprises the main trunk channel and three small branch drains. The cost of the branch drains with a proportionate share of incidental expenses, $2,045.72 in all, is eliminated from the cost on which the grant is based.

The township treasurer reports the total cost of the work at $14,222.00. Deducting the cost of the branch drains with a proportionate share of the incidental expenses, $2,045.72, leaves the legitimate cost of the trunk channel at $12,176.28.

I examined the drain on November 17th, 1931, and found the work completed in a satisfactory manner.

The main drain of this work is a trunk channel costing more than $10,000 and is entitled to aid.

On report, a grant of $2,435.00, being 20% of the cost of the drain, was paid to the township of Usborne, the initiating municipality.

Grand Marais Drain, Sandwich East and Sandwich West Townships, West Essex

This drainage work was constructed by the Essex Border Utilities Commission under the provisions of chapter 98, subsection 10 of section 22, Ontario Statutes, 1929.

The Grand Marais is a natural watercourse. It starts at the Pelette Road in Sandwich East and runs westerly through Sandwich East and Sandwich West to Turkey Creek, a distance of about 7 miles. The course of the creek is roughly parallel to the rear border of the Border Cities. The drainage area comprises some 8,155 acres, 3,767 in Sandwich East and 4,388 in Sandwich West.

This creek was improved under The Municipal Drainage Act about 1887 and it has been cleaned out and improved several times since the original construction. Before the present scheme of improvement was launched, the upper half of the drain was in a very unsanitary condition. A number of sewers had been constructed that emptied into the creek, converting the upper end into a filthy cesspool about three miles long.

In 1927, the township of Sandwich East undertook the improvement of the creek under The Municipal Drainage Act. R. W. Code, C.E., was employed to examine and report. Mr. Code presented a report calling for an expenditure of some $250,000. Prolonged litigation followed and the drainage referee set aside the Code report.

The improvement of the creek was a work of necessity. The Essex Border Utilities Commission secured legislation empowering the Commission to carry out the work of improving the creek and levying the cost on the lands and roads affected by the drain. The only practical difference between the Essex Border Cities Commission's scheme and a work under The Municipal Drainage Act is: under the former, the cost is levied on the property affected, under a gene ral rate on assessment values and under The Drainage Act, the specific amount is charged against each lot, part of lot and the roads affected by the work. Under either system, the drainage area bears the entire cost.

The work of improving the creek starts in the township of Sandwich East, 9,750 feet east of the townline between Sandwich East and Sandwich West. A 60-inch sewer on Alexis Road discharges into the sewer at the head. The bottom of this sewer is 3 feet 3 inches below the bottom of the drain. The drain has a depth of 8 feet at the head and is 7 feet 2 inches below the present creek bed. The work extends west along the creek on a grade approximately 1 foot 3 inches per mile, 10,481 feet to the Michigan Central Railway. The bottom width of this section is 10 feet with side slopes of 1¼ to 1. The depth at the Michigan Central Railway is 7 feet 6 inches and the grade line 4 feet 5 inches below the old creek bed. From the Michigan Central Railway, the drain extends west near and along the creek 10,719 feet to the Huron Line in the township west. The drain has a length of 11,450 feet in Sandwich West. The section west of the Michigan Central Railway has a grade of 2 feet 6 inches per mile, the bottom width is 12 feet and the side slopes are 1 to 1.

The work includes the construction and enlargement of highway bridges and also provides farm bridges across the drain. The Essex Border Utilities Commission reports the total cost at $92,998.13. Included in this sum are items of interest amounting to $9,177.98, which should be eliminated, leaving the legitimate cost of the work at $83,820.15.

The Grand Marais drain is a trunk channel within the meaning of the Provincial Aid to Drainage Act and is entitled to aid. Attached is a copy of an Order-in-Council directing that this drain be treated as though it was constructed under the provisions of The Municipal Drainage Act. I examined the drain on June 24th, 1932, and found the work completed in a very satisfactory manner.

On report, a grant of $16,764.00, being 20% of the cost of the drain, was paid to the Essex Border Utilities Commission.

Jones Creek Drain in the Front of Yonge and the Front of Escott, Leeds

This drainage work was carried out by the township Front of Yonge under the provisions of The Municipal Drainage Act and in accordance with plans, etc., prepared by Geo. L. Brown, O.L.S. and C.E. The engineer's report was adopted May 2nd, 1927, and the petition for aid was filed in this Department on November 15th, 1930.

This drain was originally constructed under the drainage law in 1894–95. The present work of repair and improvement was started in 1925, but owing to prolonged litigation, the work of construction was not started until October, 1927.

This drainage work starts near the centre of lot 20 in the 5th concession of Escott and runs east and south following the course of the Jones Creek to the

Escott-Yonge townline, which it crosses near the north part of concession 3 of Escott. Thence it follows Jones Creek east and south to a sufficient outlet which is reached at the old Yonge Mill Dam just below the King's Highway No. 2. The length of the drain is 57,500 feet, about 11 miles. The drain has a bottom width of 5 feet in the upper half and 8 feet in the lower half. The depth of cut varies from 2 to 6 feet with side slopes of one-half to one.

The drainage area comprises some 19,000 acres, but a large percentage of this is waste land.

The estimated cost of the work complete was $10,165.41, which was assessed by the engineer on the lands and roads affected as follows:

On lands and roads in	Yonge Front	$5,120 06
" "	Escott Front	4,795 19
" "	Front of Leeds and Lansdowne	138 59
" "	Rear of Leeds and Lansdowne	111 57

The cost of the drain has greatly exceeded the engineer's estimate. Construction was estimated at $6,915.41 and cost $12,108.65. Incidental expenses were estimated at $3,250.00 and cost $7,590.88, or a total excess of $9,534.12.

I examined the drain on August 20th, 1931, and found the work completed in a satisfactory manner. The township treasurer in the attached statement reports the cost of the drain $19,699.53.

On report, a grant of $3,940.00, being 20% of the cost of the drain, was paid to the township of Yonge Front, the initiating municipality.

KERSEY AND GOVERNMENT DRAIN NO. 2 REPAIR, RALEIGH TOWNSHIP, WEST KENT

This drainage work was carried out by the township of Raleigh, under the provisions of The Municipal Drainage Act and in accordance with plans, etc., prepared by W. G. McGeorge, O.L.S. and C.E. The engineer's report was adopted on the 14th day of April, 1930, and the petition for aid was filed in this Department on May 15th, 1930.

The work consists of repairing and improving part of the Kersey Drain to its outlet in Government Drain No. 2 and repairing and improving part of Government Drain No. 2, to provide a sufficient outlet for the improved Kersey Drain. The work commences on the Kersey drain at the south side of the 8th concession road at the northwest angle of lot 8 and extends northerly along the Kersey drain 9,325 feet to its junction with the Government Drain No. 2 at the 7th concession road. Thence westerly and northerly along Government Drain No. 2, 6,700 feet to the outlet on the 6 and 7 sideroad near the centre line of concession 6. The drain has a bottom width of 8 feet at the head and gradually widens out to 20 feet bottom width at the outlet. The depth of cut varies from 6 feet to 17 feet with side slopes of one to one throughout.

The estimated cost of the work was $10,800.00 which was assessed by the engineer on the lands and roads affected as follows:

On lands and roads in	Raleigh	$9,950 00
" "	Tilbury East	850 00

The cost of the work complete as reported by the treasurer of Raleigh was $10,256.82.

I examined the drain on May 15th, 1931, and found the work completed in a satisfactory manner.

This drain is a trunk channel costing more than $10,000 and is entitled to aid.

On report, a grant of $2,051.00, being 20% of the cost of the drain, was paid to the township of Raleigh, the initiating municipality.

KINLOSS–KINCARDINE DRAIN, KINLOSS AND KINCARDINE TOWNSHIPS, SOUTH BRUCE

This drain was constructed by the township of Kinloss under the provisions of The Municipal Drainage Act and in accordance with plans, etc., prepared by Fred A. Edgar, C.E. The engineer's report was adopted on June 9th, 1930, and the petition for aid was filed in this Department on September 2nd, 1930.

The drain starts at the southeast part of lot 9, south of the Durham road in Kinloss and runs northwest in a natural watercourse 11,257 feet to the Kinloss–Kincardine townline. Thence continuing northwest 15,578 feet to a sufficient outlet, which is reached on lot 30 in the 6th concession of Kincardine.

The upper part of the drain, 2,400 feet is a covered tile drain. The cost of this portion, with a proportionate share of the incidental expenses is not included in the cost of work on which the grant is based. The trunk channel has a bottom width of 3½ feet at the head and gradually widens to 6 feet bottom width at the outlet. The depth of cut varies from 4 to 7½ feet with side slopes of 1 to 1.

A branch of the main drain was constructed in Kincardine. It starts on lot 58 in the 2nd concession and runs northeast to the main drain a distance of 5,473 feet. This drain has a bottom width of 3 feet at the head and widens to 3 feet 9 inches bottom width at the outlet. The depth of cut varies from 3½ to 6½ feet, with side slopes of 1 to 1. This drain has a large drainage area. It furnishes an outlet for a number of lateral drains and may be properly classed as a trunk channel.

The engineer's estimate of the cost of the work complete was $16,347.00 which amount was assessed by the engineer on the lands and roads affected as follows:

On lands and roads in Kinloss	$6,155 00
" " Kincardine	10,192 00

I examined the drain on August 18th, 1931, and found the work completed in a satisfactory manner. This work consists of trunk channels costing more than $10,000 and is entitled to aid.

The treasurer of the township of Kinloss reports the cost of the work complete at $11,521.57. This cost includes the cost of the covered tile portion of the drain, which with a proportionate share of incidental expenses amounts to $661.50. Deducting this amount from the total cost leaves the legitimate cost of the trunk channels at $10,860.07.

On report, a grant of $2,172.00, being 20% of the cost of the drain, was paid to the township of Kinloss, the initiating municipality.

LOUTH DRAIN REPAIR AND IMPROVEMENT, OSGOODE TOWNSHIP IN CARLETON COUNTY, WINCHESTER TOWNSHIP IN DUNDAS COUNTY, AND RUSSELL TOWNSHIP, RUSSELL COUNTY

This drainage work was constructed by the township of Osgoode under the provisions of The Municipal Drainage Act in accordance with plans prepared by W. H. Magwood, C.E. The engineer's report was adopted by the council of Osgoode on October 7th, 1929, and the petition for aid was filed in this Department on April 5th, 1930.

The drain was originally constructed in 1909 and was carried to an outlet in the 10th concession of Osgoode. The present work starts on a watercourse near the northeast corner of lot 1 in the 11th concession of Winchester and extends in a northeasterly course through Winchester and Osgoode to the front of lot 6 in the first concession of Russell. Thence in an easterly direction through lots 6 and 7 in Russell to a sufficient outlet which is reached near the centre of the 3rd concession of Russell. The length of the drain is 49,000 feet, about 9¼ miles. The drain has a bottom width of 2 feet at the head and widens gradually to 6 feet at the outlet. The depth of cut ranges from 3 to 6 feet. In the township of Winchester, the side slopes are 1¼ to 1 and on the balance of the drain the side slopes are 1 to 1. A branch drain, which may be classed as a trunk channel was constructed in the township of Osgoode. This drain commences at the line between lots 39 and 40 in the 9th concession and extends southerly a distance of 5,720 feet, joining the main drain near the middle of lot 43 in the 9th concession. The drain has a bottom width of 2 feet throughout. The depth of cut ranges from 3 to 5 feet with side slopes of 1 to 1.

The drainage basin has an area of 9,155 acres, 1,732 acres in Winchester, 4,341 acres in Osgoode and 3,082 acres in Russell. The estimated cost of the work complete was $21,490.00, which sum was assessed by the engineer on the lands and roads affected as follows:

On lands and roads in Winchester	$5,905 34
" " Osgoode	13,660 06
" " Russell	1,924 60

I examined the drain on August 21st, 1931, and found the work completed in a satisfactory manner. This drainage work consists of trunk channels costing more than $10,000 and is entitled to aid.

The treasurer of Osgoode reports the cost of the work complete at $19,717.25.

On report, a grant of $3,943.00, being 20% of the cost of the drain, was paid to the township of Osgoode, the initiating municipality.

McCARGON DRAIN, HOWARD TOWNSHIP, EAST KENT

This drain was constructed by the township of Howard under the provisions of The Municipal Drainage Act and in accordance with plans, etc., prepared by Jas. M. McGregor, O.L.S. and C.E. The engineer's report was adopted on July 30th, 1930, and the petition for aid was filed in this Department on December 10th, 1930.

This drainage work consists of the repair, enlargement and extension of the McCargon Drain, originally constructed under the provisions of The Municipal Drainage Act.

The work starts at the southwest part of lot 16 in the 5th concession of Howard and runs northwest along a natural watercourse to the 6 and 7 sideroad, at the north part of lot 7, concession 1. Here the drain leaves the natural course and runs north on the east side of the sideroad to the Julien Drain. Thence the work, extends west along the Julien drain one mile to a sufficient outlet at the east part of lot 4 in the broken front concession. The length of the drain is 38,600 feet or about 7⅓ miles. The drain has a bottom width of 3 feet at the head and gradually widens out to a bottom width of 10 feet at the outlet. The depth of cut ranges from 3 to 9 feet with side slopes of 1 to 1 throughout.

The estimated cost of the work was $13,766.50 which was assessed by the engineer against lands and roads in Howard affected by the drain.

I examined the drain on October 1st, 1931, and found the work completed in a satisfactory manner.

The treasurer of Howard reports the cost of the drain complete at $10,845.01. This drain is a trunk channel costing more than $10,000 and is entitled to aid.

On report, a grant of $2,169.00, being 20% of the cost of the drain, was paid to the township of Howard.

MUNICIPAL DRAIN NO. 5, WALLACE AND GREY TOWNSHIPS, NORTH PERTH AND NORTH HURON

This drainage work was carried out by the township of Wallace under the provisions of The Municipal Drainage Act and in accordance with plans, etc., prepared by Fred A. Edgar, Civil Engineer. The engineer's report was adopted on May 30th, 1930, and the petition for aid was filed in this Department on September 30th, 1930.

This work comprises the main trunk channel, a branch trunk channel and 11 branch or lateral drains mostly covered. The cost of the lateral drains is eliminated from this report.

The main trunk channel starts at the line between lots 56 and 57 in the 3rd concession of Wallace and runs westerly following a watercourse a distance of 17,845 feet to the townline between Grey and Wallace. Thence continuing on the watercourse through Grey in a westerly direction 17,595 feet to a branch of the Maitland River. Thence west along the river 2,600 feet to the side road between lots 20 and 21 in the 1st concession of Grey. The total length is 38,040 feet or about 7½ miles. The drain has a bottom width of 3 feet at the head and widens gradually to a bottom width of 18 feet at the outlet. The depth of cut varies from 3 to 6 feet with side slopes of one to one throughout.

Branch "A" which is also a trunk channel commences at the centre of lot 62 on the road between concessions 2 and 3 of Wallace and runs west 3,470 feet to the Howick–Wallace townline. Thence following a watercourse through Howick 6,130 feet it again reaches the Howick Wallace townline. Thence south along the watercourse through Wallace 1,463 feet to the main drain. The length of this branch is 11,063 feet, about 2 1/10 miles. The bottom width of this drain is 2½ feet at the head and widens to 4 feet at the outlet. The depth of cut varies from 3 to 6 feet with side slopes of one to one throughout.

The estimated cost of the main drain and branch "A" was $17,865.90 which was assessed by the engineer on lands and roads affected as follows:

On lands and roads in Wallace	$9,414 50
" " Howick	6,333 80
" " Grey	1,816 60
On roads, County of Huron	33 60
" Counties of Huron and Perth	267 40

The treasurer reports the cost of the main drain, including a proportionate share of incidental expenses at $14,333.52 and the cost of branch "A" at $3,575.32, a total cost for trunk channels of $17,908.84. This drainage work as reported, consists of trunk channels costing more than $10,000 and is entitled to aid.

I examined the drain on August 18th, 1931, and found the work completed in a satisfactory manner.

On report, a grant of $3,581.00, being 20% of the cost of the drain, was paid to the township of Wallace, the initiating municipality.

PRANCE CREEK DRAIN, McGILLIVRAY TOWNSHIP, NORTH MIDDLESEX

This drainage work was carried out by the township of McGillivray under the provisions of The Municipal Drainage Act and in accordance with plans, etc., prepared by Geo. A. McCubbin, O.L.S. and C.E. The engineer's report was adopted on May 5th, 1930, and the petition for aid was filed in this Department on August 22nd, 1931.

The drain lies wholly within the township of McGillivray. It starts at the line between lots 13 and 14 in the 17th concession and runs west following the Prance Creek to the Aux Sables River, which is reached on the south side of the 3 and 4 sideroad in the Aux Sables concession. The drain is 54,170 feet long, or about 10¼ miles. The drain has a bottom width of 2 feet at the head and gradually widens to a bottom width of 10 feet at the outlet. The depth of cut ranges from 2½ to 10 feet with side slopes of 1 to 1.

The estimated cost of the work was $21,273.00, which was assessed by the engineer against lands and roads in the township of McGillivray.

I examined the drain on October 2nd, 1931, and found the work completed in a satisfactory manner.

The township treasurer reports the cost of the drain complete at $13,917.41. Included in this is the cost of two small branch drains which, with a proportionate share of the incidental expenses, amounts to $441.50. Deducting this amount from the total cost leaves the cost of the work channel at $13,475.91.

This drain is a trunk channel, costing more than $10,000 and is entitled to aid.

On report, a grant of $2,695.00, being 20% of the cost of the drain, was paid to the township of McGillivray.

RICHMOND DRAIN IMPROVEMENT, COLCHESTER SOUTH, SOUTH ESSEX

This drainage work was carried out by the township of Colchester South under the provisions of The Municipal Drainage Act and in accordance with plans, etc., prepared by J. J. Newman, O.L.S. and C.E. The engineer's report was adopted on December 2nd, 1930, and the petition for aid was filed in this Department on August 28th, 1931.

This drain commences at the south side of the road between concessions 1 and 2, near the line between lots 7 and 8 in the 2nd concession and extends due north to the centre of the 5th concession. Thence east on the blind line of this concession to the line between lots 11 and 12. Thence southeast to the road in front of the 5th concession. Thence east along the 5th concession road to the line between lots 13 and 14. Thence southerly following a watercourse to a sufficient outlet, which is reached about 100 rods south of the 4th concession road.

The drain has a bottom width of 7 feet at the head and gradually widens out to 20 feet at the outlet. The depth of cut ranges from 7 to 16 feet and the side slopes are 1 to 1 throughout. The total length is 36,000 feet or about 7 miles.

The estimated cost of the work was $17,920.00, which was assessed against the lands and roads affected, all within the township of Colchester South.

I examined the drain on October 24th, 1931, and found the work completed in a very satisfactory manner.

This drainage work is a trunk channel costing more than $10,000 and is entitled to aid. The township treasurer reports the expenditure on the drain at $15,245.28.

On report, a grant of $3,049.00, being 20% of the cost of the drain, was paid to the township of Colchester South.

TEESWATER RIVER DRAIN, CULROSS AND GREENOCK TOWNSHIPS, SOUTH BRUCE

This drainage work was carried out by the township of Culross under the provisions of The Municipal Drainage Act under an order from the Drainage Referee and in accordance with plans, etc., prepared by W. G. McGeorge, O.L.S. and C.E.

In accordance with directions from the Drainage Referee, the work was done in two sections. On March 25th, 1930, I reported on the completion of the lower outlet section at a cost of $79,734.42 and a grant of $15,946.00 was paid to Culross.

The former work extended from the 15–16 sideroad in Greenock northeast to the 5 and 6 sideroad, a distance of 17,600 feet to a sufficient outlet.

The present work starts at the 15 and 16 sideroad and extends south along the river channel a distance of 38,000 feet to the road between concessions 14 and 15 in Culross. Throughout this section, a great number of hardpan bars are encountered. The material in the bars was so hard that the current had no effect on them and the river channel was seriously affected. A grade line was established and the present work consisted of providing a channel from 20 to 25 feet in width and cut to grade through all the bars in this section.

I examined this section of the drain on August 18th, 1931, and found the work completed in a satisfactory manner. This work is a trunk channel costing more than $10,000 and is entitled to aid.

The township treasurer reports the total cost of the drain, which includes the work covered by my previous report at $91,500.51. In the previous report, the cost of the work amounted to $79,734.42, leaving a balance of $11,766.09 on which a grant is to be paid.

On report, a grant of $2,353.00, being 20% of the cost of the balance of the drain, was paid to the township of Culross.

THAMES RIVER EMBANKMENT DRAINAGE WORKS, DOVER TOWNSHIP, WEST KENT

This drainage work was carried out by the township of Dover under the provisions of The Municipal Drainage Act and in accordance with plans, etc., prepared by W. G. McGeorge, O.L.S. and C.E. The engineer's report was adopted on October 27th, 1930, and the petition for aid was filed in this Department on December 17th, 1930.

This work consists of improving the artificial banks or levees on the north bank of the Thames River in front of a section of the township of Dover. This section lying west of the 5 and 6 sideroad is low and flat and was subject to flooding during periods of high water in the Thames River. Three pumping schemes had been developed in this flooded area: The Front Concession pumping works; the Gervais pumping works and the Dolsen Creek pumping works, covering a river frontage of 5 4/5 miles. The river road extends across this frontage and for the greater part of the distance, 1,314 rods, the road grade was used as a levee. In certain sections, covering a length of 412 rods, the levee is built independent of the road grade. Erosion of the bank had seriously damaged the road grade and levee. The high water of 1929–30 proved that the levees were too low and not strong enough for security.

Under the plan carried out, the road grade was widened to 30 feet and raised to a uniform level well above the high water level of 1929. The levees apart from the road were widened to a top width of 6 feet with side slopes of 1 to 1 on each side and were built up to the level of the new road grade.

The estimated cost of the work complete was $20,000, which was assessed by the engineer—$10,603.00 against the lands and $9,397.00 against the roads affected by the work.

I examined the work on May 15th, 1931, and found the work completed in a satisfactory manner.

This work is a drainage work accomplished through embankments and pumping and is entitled to aid. The treasurer of the township of Dover reports the cost of the complete work at $17,902.04.

On report, a grant of $3,580.00, being 20% of the cost of the work, was paid to the township of Dover.

URQUHART DRAIN, CALEDONIA TOWNSHIP, PRESCOTT

This drain was constructed by the township of Caledonia under the provisions of The Municipal Drainage Act and in accordance with the report and plans prepared by H. J. Walker, Civil Engineer. The engineer's report was adopted on June 23rd, 1930, and the petition for aid was filed in this Department on February 20th, 1931.

This drain commences at the south side of the townline between Kenyon and Caledonia at the rear of the west half of lot 6 in the 9th concession of Caledonia and extends north through the 9th, 8th and 7th concessions of Caledonia, crossing into the 6th concession near the middle of lot 13. Thence it extends west to a sufficient outlet which is reached on lot 14 in the 6th concession. The total length of the drain is 20,000 feet.

The drain has a bottom width of 2½ feet in the upper 5,400 feet with side slopes of 1¼ to 1. The depth of cut ranges from 2 to 5 feet. For the balance of the drain, the bottom widens gradually to 6 feet. The depth of cut ranges from 5 to 8½ feet with side slopes of 1 to 1.

A small branch or lateral drain was constructed on the line between lots 9 and 10 from the main drain south 1,710 feet to the centre line of the 8th concession. The cost of the branch drain is eliminated from the cost on which the grant is based.

The estimated cost of the drain exclusive of highway bridges was $12,302.00, which was assessed by the engineer on the lands and roads affected as follows:

On lands and roads in Caledonia	$7,755 98
" " Kenyon	4,546 02

The cost of the drain as reported by the treasurer of the township of Caledonia, exclusive of highway bridges, was $11,326.47. Included in this cost is the cost of the branch drain which, with its proportion of incidental expenses, amounts to $477.63. Deducting this sum from the total cost leaves the legitimate cost of the trunk channel at $10,848.84.

I examined the drain on November 12th, 1931, and found the work completed in a satisfactory manner.

This drain is a trunk channel costing more than $10,000 and is entitled to aid.

On report, a grant of $2,169.00, being 20% of the cost of the work, was paid to the township of Caledonia, the initiating municipality.

WHITEBREAD DRAIN REPAIRS, SOMBRA TOWNSHIP IN LAMBTON, AND CHATHAM TOWNSHIP IN WEST KENT

This drainage work was constructed under the provisions of The Municipal Drainage Act under two by-laws and two reports. The township of Sombra initiated the work and instructed Geo. A. McCubbin, O.L.S. and C.E., to report on the work. The engineer's report was adopted on July 2nd, 1929, and the petition for aid was filed in this Department on December 10th, 1930.

It is a statutory duty for each municipality to construct works of repair within its boundaries on municipal drains when necessary. The township of Sombra notified the township of Chatham to repair the Whitebread Drain and W. G. McGeorge, O.L.S. and C.E., was instructed to report. The engineer's report was adopted on June 23rd, 1930, and the petition for aid was filed in this Department on December 10th, 1930.

The drain in Sombra is in two sections, the townline section and the Grape Run section. The townline section starts at the sideroad between lots 10 and 11 and extends west on the north side of the townline between Chatham and Sombra, 6,450 feet to the Grape Run or Whitebread Drain. This section has a bottom width of 20 feet. The depth of cut ranges from 7 feet 6 inches to 10 feet 8 inches with side slopes of 1 to 1. The work on the Grape Run extends from the townline north through lot 4 on a natural watercourse 2,266 feet to the centre line of concession V, Sombra. This section has a bottom width of 16 feet. The depth of cut ranges from 7 feet to 8 feet 10 inches, with side slopes of 1 to 1.

The work in the township of Chatham follows the course of the original Whitebread Drain. It commences at the Sombra–Chatham townline at the end of the Sombra work and extends south to the centre line of concession 4, Chatham township. Thence west along the centre line of the concession to a watercourse at the centre of lot "A." Thence southwest along the watercourse to the Chenal Ecarte, a total length of 11,540 feet or about 2¼ miles. The bottom width is 25 feet throughout. The depth of cut ranges from 10 feet to 16 feet 5 inches with side slopes of 1 to 1. The new bottom is from 2½ feet to 3 feet 4 inches below the old bottom.

The estimated cost of the work in Sombra was $8,345.00, which was assessed by the engineer on the lands and roads affected as follows:

On lands and roads in Sombra	$4,799 97
" " Chatham	3,545 03

The estimated cost of the work in Chatham was $9,725.00, which was assessed by the engineer on the lands and roads affected as follows:

On lands and roads in Sombra	$5,593 73
" " Chatham	4,131 27

The estimated cost of both works was $18,070.00, which was assessed as follows:

On lands and roads in Sombra	$10,393 70
" " Chatham	7,676 30

I examined the drainage work on October 2nd, 1931, and found the work completed in a satisfactory manner. The treasurer of Sombra reports the cost of the work in Sombra at $9,310.38. The treasurer of Chatham reports the cost of the work in Chatham at $9,271.87, the total cost of the combined work being $18,582.25.

This combined drainage work consists of trunk channels costing more than $10,000 and is entitled to aid.

On report, a grant of $3,716.00, being 20% of the cost of the work, was paid to the township of Sombra, the initiating municipality.

Respectfully submitted,

A. J. HALFORD,
Engineer, Public Works.

Toronto, January 23rd, 1933.

HONOURABLE J. D. MONTEITH, M.D.,
Minister of Public Works and Labour, Ontario.

SIR:

I have the honour to submit the following statement showing the several contracts entered into with His Majesty during the twelve months ending 31st of October, 1932, in connection with the Public Buildings and Works, subject to the control of the Public Works Department of Ontario.

I have the honour to be, Sir,

Your obedient servant,

DIGBY HORRELL,
Secretary and Purchasing Agent.

STATEMENT No. 14

Showing the several contracts entered into with His Majesty during the twelve months ending the 31st of October, 1932, in connection with the Public Buildings and Works, subject to the control of the Public Works Department, Ontario.

Date 1931	Work	Subject of Contract	Contractors	Amount
Nov. 4	Brockville, Ontario Hospital..........	Supply and installation of heating and ventilating systems in Nurses' Home.	Wright Brothers, Limited, Toronto.......	$8,060 00
Nov. 6	Toronto, Parliament Buildings........	Supply and delivery of cut stone for Tower Section, East Block Extension.	Arthur Stead Cut Stone Co., Hamilton...	134,615 38
Nov. 6	Guelph, Ontario Agricultural College....	Plumbing for Section No. 3 of the Administration Buildings.	Geo. Fairley, Guelph..................	3,980 00
Nov. 12	Toronto, Parliament Buildings........	Supply and erection of steel stairs in the East Block Extension, including the Tower Section.	Canadian Ornamental Iron Company, Ltd., Toronto............................	9,100 00
Nov. 13	Woodstock, Ontario Hospital..........	Construction of new Laundry Building.....	Pounder Brothers, Stratford............	40,825 00
Nov. 12	Toronto, Parliament Buildings........	Glass and glazing for the East Block Extension, including the Tower Section.	W. E. Phillips Company, Ltd., Toronto..	8,500 00
Nov. 17	Brockville, Ontario Hospital..........	Supply and installation of elevator in Nurses' Home under construction.	Canadian Elevator Equipment Co., Ltd., Toronto............................	3,700 00
Nov. 18	Toronto, Parliament Buildings........	Supply and erection of steel vault door, lining and grilles for Treasury Vault in East Block Extension.	Goldie McCullough Co., Ltd., Galt......	11,000 00
Nov. 28	Orillia, Ontario Hospital..............	Electrical work for Girls' Dormitory Building under construction.	G. S. Whelpton, Windsor..............	8,800 00
Nov. 28	Galt, Girls' Training School...........	Boiler setting and stoker equipment for Boiler House.	Combustion Engineering Corporation, Ltd., Toronto............................	6,590 00
Dec. 4	Brockville, Ontario Hospital..........	Plumbing for Nurses' Home under construction.	McKinley & Northwood Co.,Ltd., Ottawa .	10,395 00

Dec. 8	Toronto, Parliament Buildings	Supply and construction of smoke breeching and chimney in Tower, East Block Extension.	Francis Hankin Co., Ltd., Toronto	9,600 00
Dec. 10	Orillia, Ontario Hospital	Plumbing, heating and ventilating for Girls' Dormitory under construction.	The Partridge Sanitary and Heating Engineers, Toronto	34,340 00
Dec. 24	Toronto, East Block, Parliament Buildings	Supply and installation of terrazzo floors in East Block Extension, including tower.	Italian Mosaic and Tile Co., Ltd., Toronto	6,758 86
Dec. 24	Toronto, East Block, Parliament Buildings	Supply and laying of AAA Brown Battleship linoleum in East Block Extension, including Tower Section.	The T. Eaton Company, Ltd., Toronto	14,560 00
Dec. 29	Toronto, East Block, Parliament Buildings	Electric wiring for East Block Extension	The Standard Electric Co., Toronto	14,375 00
1932 Jan. 15	Penetanguishene, Ontario Hospital	Interior partitions and plastering of cells, Criminal Insane Building.	The Scholey Construction Co., Windsor	27,868 00
Jan. 25	Penetanguishene, Ontario Hospital	Supply and installation of steel cell grilles, steel cell doors, Criminal Insane Building.	J. & J. Taylor Co., Ltd., Toronto	41,500 00
Jan. 27	Woodstock, Ontario Hospital	Installation of heating system in new Laundry Building.	Sheppard & Abbott Co., Ltd., Toronto	9,590 00
Jan. 27	Woodstock, Ontario Hospital	Installation of plumbing system in new Laundry Building.	Purdy Mansell Co., Ltd., Toronto	4,900 00
Jan. 27	Woodstock, Ontario Hospital	Electrical work for new Laundry Building	Philip W. Wilson, Toronto	4,473 00
Feb. 29	Toronto, Parliament Buildings	Supply and delivery of finishing hardware for East Block Extension.	The Aikenhead Hardware Co., Ltd., Toronto	3,100 00
Feb. 27	Guelph, Ontario Agricultural College	Construction of tunnels and sidewalks	The McArthur Engineering and Construction Co., Guelph	10,068 75
April 14	Woodstock, Ontario Hospital	Supply and installation of Laundry Machinery and Equipment in new Laundry Building.	Beaver Laundry Machinery Co., Ltd., Toronto	11,099 00
April 14	Woodstock, Ontario Hospital	Supply and installation of Laundry Machinery and Equipment in new Laundry Building.	Canadian Laundry Machinery Co., Ltd., Toronto	1,346 00

STATEMENT No. 14—*Continued*

Rent		4,711.00	
Commission		2,218.50	
Miscellaneous		524.51	
			34,255.80
EXPERIMENTAL FUR FARM			2,566.50
			$613,784.70

For information and purposes of comparison, we append a table which sets forth a statement giving the total revenues and expenditures of this Department in each of the past three years, viz., 1930, 1931 and 1932, as follows:

	Revenue	Expenditure	Surplus or Deficit
1930	$775,862.84	$687,545.90	$88,316.94*
1931	715,462.83	744,069.96	28,607.13†
1932	613,784.70	629,176.02	15,391.32†

* Surplus.
† Deficit.

It would be a justifiable assertion to state that the decrease shown by these figures should not in any way be attributed to deterioration of the attractions which this province as a whole presents to the sportsman, whether hunter or angler, but we believe it would be superfluous in this Report to endeavour to present any explanation of the very obvious reason for declining revenues.

Practically every source of revenue showed a decrease during the year, and a perusal of the detailed figures reveals the fact that fees received from the sale of non-resident hunting and angling licenses amounted to $182,497.35, a reduction as compared with similar items of revenue during the previous year of $66,251.30, which represents approximately two-thirds of the total decrease.

STATISTICS

Various statistical tables will be found as appendices to this Report, which tables contain information as to the several species and quantities of fish fry and fingerlings raised in the fish hatcheries and rearing stations maintained and operated by the Department through the Fish Culture Branch. In addition will be found information as to the designation and location of the various waters in which these fry and fingerlings have been planted for re-stocking purposes.

There are further statistical tables in respect of the commercial division of provincial fisheries, while throughout the report will be observed statistics as to many other aspects of Departmental activities.

The figures in all cases have been very carefully assembled and prepared, and those concerned will find them of considerable interest and value.

GAME

The following table shows the number of large game hunting licenses which have been issued by the Department during the years 1930, 1931 and 1932:

	1930	1931	1932
Resident moose	1,424	1,446	1,135
Resident deer	26,213	26,436	22,932
Non-resident hunting	2,015	1,766	1,309

and these figures would indicate that the interested hunter is not slow to take advantage of the opportunity which big game hunting in this Province affords.

Herewith is a brief summary of conditions as they have existed throughout the year under review as they have affected game animals and birds, which summary has been compiled from reports prepared and submitted by our District Superintendents from information supplied by the field officers on their respective staffs:

Deer.—In the more remote sections of the province it would appear from the reports submitted by members of the field service that there is some general improvement and increase in the numbers of these animals, though this condition does not apply in the southern division and the more accessible portions of the northern divisions, where intensive hunting is responsible for a reduction in the numbers which constitute the herd.

Moose.—Conditions are about the same, the year reported upon showing little, if any, improvement over the conditions prevailing in recent years, which have been but fairly good.

Caribou.—Reports indicate that notwithstanding the close season which has been maintained on this species, there is no noticeable improvement evident as far as these animals are concerned, and a continuation of the close season would appear to be essential.

Elk (Wapiti).—During the year, with the co-operation of the National Parks Branch of the Federal Department of the Interior, it was possible for us to arrange for the shipment into the province of a carload of elk, twenty-five animals in all. The shipment arrived about the middle of November, the animals being in good condition, and in order that the proper supervision might be accorded the experiment, these animals were placed on the Pembroke Crown Game Preserve, the lands of which Game Preserve are the property of the Department. It is anticipated that from this experiment and future continuation and expansion thereof, it will be possible to successfully introduce this species of game animal into the province.

Ruffed Grouse (Partridge).—Conditions were of such a favourable nature that it was possible to provide a limited open season with a reasonable individual limit of catch for these birds, and while a large percentage of our sportsmen availed themselves of the privilege thus provided, reports are to the effect that partridge still appear to be numerous.

Sharp-tailed Grouse (Prairie Chicken).—As in the case of ruffed grouse, an open season was provided during the Fall on these birds. Their numbers continue plentiful, though they are confined, generally speaking, to the northern and northwestern sections of the province.

Ptarmigan.—These birds in considerable numbers were observed in the northern portion of the Province and, according to reports from the District Superintendents in whose districts they were noted, at distances far south of their usual habitat.

Quail.—It is reported that these birds have been observed in many parts of the extreme southwestern counties, and that their numbers are increasing. Many hunters availed themselves of the opportunity to hunt these birds in the county of Essex, where a two-day open season was provided.

Ducks.—These birds were no less plentiful than they have been in the past four years, and conditions were a little more favourable. Reports from the far northwestern section of the province are to the effect that the Fall flight was the best in recent seasons.

Pheasants (*Ring-necked*).—The work of propagation and distribution of live birds and eggs was continued at and from the Departmental Bird Farm at Codrington. Eleven hundred and eighty-nine settings, totalling 17,835 eggs, were distributed to interested applicants for hatching, while in addition, 1,055 live pheasants were liberated in various sections in the southern portion of the province. Reports from our Field Officers contain the information that in the southern and southwestern counties these birds are on the increase; that the birds appear stronger and that conditions here are most favourable, and we find it necessary to reiterate previous expressions of appreciation of the splendid spirit of co-operation of interested parties evidenced by their unselfish assistance in the hatching of eggs and care of the young birds with the ultimate object of securing the establishment of this fine species of game bird in Ontario. In view of the favourable existing conditions, it was possible to provide a limited open season in the counties of Essex, Lincoln, Welland, Wentworth, Halton, Peel, Durham and Northumberland.

Hungarian Partridge.—Operations in connection with the propagation of this species of game bird were continued at the Normandale Bird Farm (Norfolk County), and while some progress is being made along these lines, the increase was retained and no general distribution was undertaken during the year reported upon.

Plover and Snipe.—These birds continue to be very scarce.

Rabbits.—Conditions as they apply to these animals remained satisfactory throughout the province and in several sections desirable improvement and increase in numbers has been observed.

FURS

The following is a summary of conditions as they apply to fur-bearing animals throughout the province as compiled from reports submitted by the seven Departmental District Superintendents:

Bear.—Conditions have shown little change, though there is some decline in the numbers reported to have been taken.

Beaver.—Annual catch has once again shown a decline, though indications are to the effect that there is some increase in their numbers, particularly in the section of the province in which the protection of a complete close season is provided.

Fisher.—Reports are to the effect that their numbers are diminishing, and that general conditions are not very favourable. Annual catch shows continuing decrease.

Fox.—Conditions vary in different sections. Reports from the southern portion of the province are to the effect that these animals are decreasing in number; though in the north the reverse of this is indicated. Catch shows slight improvement over that of the previous year.

Lynx.—These animals are very scarce in all sections, and while the reported catch exceeded that of the previous year, nevertheless their numbers are evidently decreasing.

Marten.—Very few of these animals are now taken. Numbers are decreasing in practically all sections and they are very scarce.

Mink.—In the south, a decrease is reported, while there is some improvement evident in the north. Annual catch was the highest reported since 1926.

Muskrat.—Conditions remained about the same. some improvement being noted in the northwestern end of the province.

Otter.—The annual catch showed an increase over that of the previous year. General observations apply as in the case of beaver.

Raccoon.—Conditions remained about the same. Catch shows some increase over that of previous year.

Skunk.—Reports indicate that these animals are more numerous, which is evidently borne out by the greatly increased annual catch, which was the largest in several years.

Weasel.—There was considerable improvement in the numbers taken, though conditions remained about the same.

The total number of pelts taken during the season was approximately the same as that of the previous year, decreases in beaver and muskrat being balanced by increases in other species. There were undoubtedly fewer trappers operating, but it is desirable to again emphasize the necessity for securing observance of existing regulations as they apply to closed seasons and trapping operations, as these are essential to preserve unimpaired, as far as possible, the present fur resources of the province.

The following table compares, for the past three years, pelts of fur-bearing animals, other than those raised on licensed fur farms, on which royalty was paid:

	1930	1931	1932
Bear	1,594	883	705
Beaver	17,493	15,304	13,230
Fisher	2,510	1,544	1,258
Fox (cross)	1,188	799	1,177
Fox (red)	11,076	8,441	9,564
Fox (silver or black)	154	97	121
Fox (white)	116	620	562
Fox (not specified)	106	107	113
Lynx	871	799	1,088
Marten	1,770	1,191	1,264
Mink	30,226	34,271	48,234
Muskrat	643,999	723,525	640,390
Otter	3,986	2,998	3,330
Raccoon	13,757	10,871	12,640
Skunk	72,667	55,734	82,917
Weasel	99,704	74,295	113,421
Wolverine	9	9	3
Total	901,226	931,282	930,017

Information received by the Department shows that these 1932 pelts were worth to the trapper the sum of $1,264,145.89, being a considerable reduction as compared with the figures for the previous year.

In addition to the above, the total of ranch-raised silver and black foxes, dressed or exported, and upon which royalty is not payable, was 19,961; 15,623 of which were exported from the province, the balance of 4,338 being dressed in Ontario. It is estimated that these pelts had a value of $555,913.85 to the fur farmers responsible for the production thereof.

FUR FARMING

The operation of farms on which the raising of fur-bearing animals in a state of captivity or semi-captivity is undertaken, falls within the supervision of this Department in accordance with the regulations provided therefor. While but of recent origin, this particular branch of activity is developing along sound and normal lines, and with the passing of time, and the experience which is thus being gained, there is every indication that some degree of security has been established as the basis for development. It will be of interest to state that every species of fur-bearing animal, native of this province, is represented on these licensed fur farms.

Report of the work undertaken at the Departmental Experimental Fur Farm, at Kirkfield, will be found in another part of this general report.

Fur Farmers' licenses issued during the past three years are as follows:

1930	1931	1932
1,557	1,609	1,505

And the following is a table which shows the numbers of the various animals reported to be stocked on these fur farms as at December 31st, in each of the three years 1930, 1931 and 1932:

Animals Stocked on Licensed Fur Farms as at December 31st

	1930	1931	1932
Beaver	66	58	44
Fisher	57	74	50
Fox (cross)	501	582	559
Fox (red)	561	562	448
Fox (silver black)	20,026	17,414	15,938
Fox (blue)	94	42	13
Lynx	6	4	2
Mink	7,184	7,198	6,170
Muskrat	1,821	1,359	511
Raccoon	1,481	1,486	12,002
Skunk	9	12	10
Bear	9	25	16
Marten	30	40	37
Badger	9	6	4
Total	*31,854	*28,862	25,004

*Exclusive of muskrat and beaver in semi-captivity.

CROWN GAME PRESERVES

The practice of establishing suitable areas as Crown Game Preserves, in which it would be possible to afford sanctuary for desirable types of game birds and animals had its inception in the year 1917. Since that time there has been annual extension, and at the end of 1932 there were in excess of three and three-quarter million acres included within the confines of the existing sixty-one Crown Game Preserves. During the year reported on, the following Game Preserves were established, representing a total area in the neighbourhood of 18,500 acres, viz.: Power Glen, located in the Counties of Lincoln and Welland; Beamsville, in the County of Lincoln; Kettle Creek, in the County of Elgin; Mosa, in the County of Middlesex; and Petawawa, in the County of Renfrew.

Reports from Field Officers would indicate that these Game Preserves are of considerable value to the various sections in which they are located, and the continued expansion of the work, particularly as far as it involves privately-owned lands, would indicate a growing realization by those concerned of the benefits which are to be derived therefrom.

WOLF BOUNTIES

During 1932, the Department received applications for the payment of bounty on 2,872 wolves, being 121 more than the number presented in 1931. The following is a comparative statement of wolf pelts presented and bounties paid during the past three years:

	Timber	Brush	Pups	Total	Bounties
For fiscal year ending October 31st, 1930.....	1,070	1,458	23	2,551	$38,074.77
For fiscal year ending October 31st, 1931.....	1,376	1,336	39	2,751	55,873.80
For fiscal year ending October 31st, 1932.....	1,413	1,413	46	2,872	68,481.35

Under existing conditions the trapping of wolves is possibly the most remunerative branch of the trapping industry, particularly so far as the trapper himself is concerned, and while bounties are paid on some wolf pelts which have been taken in the southern portion of the province, by far the greater proportion of the bounty paid applies on pelts taken in the northern and north-western districts.

ENFORCEMENT OF THE ACT

For purposes of administration and enforcement of the provisions of the Game and Fisheries Act and Regulations the province is divided into seven districts, each in charge of a District Superintendent. These officers supervise performance of departmental duties in their respective districts, and through the overseers under their jurisdiction, in addition secure observance of our Regulations. The work which has been carried out by these various Field Officers, in the way of administration and patrol, during the year, and more especially in view of the difficult and unfortunate conditions which are being experienced, was generally speaking of an entirely satisfactory nature. To a limited extent, the numbers of these regular officers were augmented for seasonal duties to the extent of securing the assistance of temporary officers during the periods of exceptional activity and when such additional assistance was required.

Remarks concerning enforcement would hardly be complete without some favourable reference to the assistance which is being constantly supplied by the Deputy Game and Fishery Wardens, of whom there were 479 during 1932. A large percentage of these appointees are members of the Fish and Game Protective Associations which exist throughout the province, and the co-operation which in a quiet way is being rendered by these honorary officers in checking violations and securing observance in a general way of the provisions of the Game and Fishery Regulations is a measure of assistance, which, in view ot the fact that it would be difficult to duplicate, is very much appreciated by those responsible for the administration of the legislation which is provided for the protection of the wild life natural resources of Ontario.

There were 1,082 cases in which offenders were apprehended and charged with violations of the provisions of our Act and Regulations, and in which convictions were secured. Fines and costs assessed and collected in these cases are as contained in the statement of revenue previously submitted in this report.

In all, there was a total of 1,669 cases in which seizure of goods and equipment was involved, and the following is a summary of the articles thus placed under seizure:

Pelts		3,086
Deer and Moose hides		19
Live Animals and Birds		37
Fish	lbs.	6,008
Fish	no.	1,264
Gill nets	pcs.	303
Gill nets	yds.	28,832
Dip nets		62
Hoop nets		34
Seine nets		32
Trap nets		40
Hooks		994
Spears		96
Rods and Lines		135
Creels		14
Tackle Boxes		8
Traps		1,146
Fire-arms		502
Boats—gasoline		4
row		40
tugs		1
Canoes		6
Punts		15
Motor cars		17
Jack-lights and lanterns		20
Deer and Moose		16
Venison	lbs.	725
Moose-meat	lbs.	1,052
Partridges		230
Geese and Ducks		31
Pheasants		24
Decoys		78
Ammunition (rounds)		610
Rabbits		41
Squirrels		21
Miscellaneous		68

In accordance with the usual practice, these confiscated articles, except those which were sold to their original owners, were disposed of by tender at sales, notice of which was advertised in the press. The amount derived from these sales is shown in the statement of revenue at the beginning of this Report.

REPORT OF THE EXPERIMENTAL FUR FARM

Due to the large number of beginners who have become interested in fur-farming during the past few years, a great deal of time has, of necessity, both by correspondence and personal interview, been spent in rudimentary instruction in the nutrition, common diseases and general care of fur-bearing animals. These methods of instruction have been supplemented by the preparation of popular bulletins dealing with the fundamentals of raising fur-bearing animals in captivity and have met with a steady demand.

It is to be expected with a comparatively new industry such as fur-farming, that a large percentage of the literature published in connection with it from time to time is based purely upon practical observations, having little or no experimental evidence to support it. Unquestionably a number of such observations have proven to be correct and have had a beneficial effect upon the industry as a whole, but it is being found, especially with problems of disease, that many erroneous ideas which have no scientific basis to warrant their adoption as correct, are commonly accepted as true.

Domestic animals and their diseases have been carefully studied for many years, and with most of them the normal conditions found in healthy individuals have been established, thus making it possible to compare the normal with the pathological, and to arrive at conclusions which give a definite clue to the disease under observation. The diseases which they are subject to, are also fairly well established and any previously unknown disease arising among them is quickly recognized as a new condition by the process of elimination.

The reverse is the case with fur-bearing animals in captivity. The normal condition to be expected in many of them is not known and the number and variety of diseases to be looked for cannot even be surmised. In many of the fur-bearers the symptoms are obscure and more difficult to observe on account of the naturally suspicious nature of the animal. Very often the first indication of disease may be that of finding the animal dead in the pen or kennel. Furthermore, the same disease may evidence itself in many different ways in a group of individuals, in that very few will show the same definite symptoms.

In view of the many difficulties presented in the treatment of fur-bearing animals, preventive medicine is of the utmost importance, and research work should be conducted with this aim in view. It also appears essential that a thorough understanding of the normal conditions should be acquired before attempting to interpret the pathological, and advantage should be taken whenever possible of laboratory aids to diagnosis.

During the year the blood morphology of foxes, mink and raccoon was thoroughly studied. An extensive report on this work will be published and made available for those desiring the information.

Considerable importance is being placed on the blood morphology of man and animals as an aid towards diagnosing certain classes of disease such as anemia, acute infections, parasitic, nutritional and kidney disorders. Before consideration can be given to any specific disease, a knowledge of the normal blood morphology is essential in order to establish the deviation from normal.

Since each species of animal varies in the number of blood cells to a given volume of blood, it is necessary to establish the normal count for the various blood elements. There appears to be a tendency to assume that the normal blood counts established for the dog are approximately the same for foxes. The investigations carried out with foxes reveal very clearly that this assumption is not correct and that the number of blood elements, staining reactions and morphology are not similar to those of the dog.

In the investigation of certain diseases at the Experimental Fur Farm, it was considered essential that special attention be given to the blood morphology of the animals being studied, namely, the fox, mink and raccoon. In order to establish the normal blood counts and morphology of the blood of these animals, over four hundred samples were taken from foxes, two hundred and fifty from mink, and two hundred from raccoon. The blood was examined for haemoglobin, red blood cells and white blood cells. Blood smears were examined for the differentiation of the white blood cells into leukocyte, lymphocyte, monocyte, eosinophil and basophil counts.

The animals were divided into groups according to their age and sex. The groups ranged from pups under one month to foxes of considerable age. These groups were examined at regular intervals throughout the year and any changes in the blood count recorded.

It is hoped that this work will provide a basis for a more rational diagnosis of many conditions found in fur-bearing animals.

Since the breeding of fur-bearing animals in captivity has become an established industry, parasitic infection among them is a matter, not only of scientific interest, but of great economic importance.

Experience has shown that foxes bred in captivity are almost invariably parasitized by the hookworm, *Uncinaria stenocephala*. A review of the literature demonstrates that research has, in foxes, apparently been confined to one phase of the subject, namely, the expulsion of the worms. Very little consideration has been given to the question of infestation of the young and to the re-infestation of animals treated with anthelmintics.

Faecal samples submitted to the Experimental Fur Farm for diagnosis from all parts of the Province of Ontario demonstrate that routine treatment of foxes with anthelmintics will not prevent re-infestation unless the environmental conditions of the ranch are given careful consideration.

Infestation can be prevented only by attacking the parasite before it gains entrance to the body of the fox, and in order to accomplish this, a study of the life-cycle and the environmental conditions under which the ova and free-living larvae develop, successfully, is necessary.

In order to establish efficient methods of control and the possibility of the complete eradication of the worm, such questions as the age of sexual maturity of the worm, the duration of the larvae stage, and the resistance of the larvae to heat and cold under various conditions, appear to be essential. Investigations of the disease in humans have accomplished much along these lines but nearly all of it has been carried out in tropical and semi-tropical countries under very different climatic conditions from those experienced in Canada, especially during the winter months.

A survey of the literature available to the writer dealing with *Uncinaria stenocephala* has revealed only one complete drawing of the male and female (Raillet, 1884). These drawings are too small and make no attempt to show differential characteristics. There also appear to be no microphotographs of *Uncinaria* larvae. For these reasons, an attempt has been made to present drawings and microphotographs of the various stages of the life-cycle of the worm.

Other phases of the hookworm problem relating to foxes, including diagnostic technique, egg counting methods, pathology and treatment, have been investigated and the findings recorded.

REPORT OF THE BIOLOGICAL AND FISH CULTURE BRANCH

Fisheries is one of the most important natural resources of Ontario, and the maintenance of this resource is the chief objective of the Branch.

The application of scientific inquiry to our fisheries and fish cultural problems continues to yield fruitful results, and the following outline of the work accomplished indicates satisfactory progress for the year.

BIOLOGICAL SURVEYS OF WATERS

During the period from July 1st to September 30th, five experienced and qualified field biologists were engaged. Three devoted their attention almost exclusively to biological surveys of waters; the fourth to examination and study of hatchery fish for the purpose of preventing, curing or controlling fish diseases, and the fifth to investigations of dams and other obstructions across waterways for the purpose of determining the feasibility of introducing fishways.

During the summer one hundred and twenty individual surveys were carried out, eleven of which were of a partial character. In the neighbourhood of eighteen hundred and eighty-four individual lakes and streams have been studied to date from the standpoint of their suitability for the growth and reproduction of various species of fish.

1. Removal of Coarse Fish and Transfers of Fish from One Body of Water to Another

A great deal of discretion must be exercised in connection with the removal of coarse or predatory fish from any body of water. We must do work of this kind on a scientific basis and not on hearsay depredations of the species complained of. In other words, we must have justifiable reasons for the removal of the fish, otherwise it is a waste of time, money and energy, which will have fatal results later, on the natural balance which we are endeavouring to maintain.

Following up the work of previous years, the removal of predatory pike from the famous trout waters of the Nipigon river and the removal of competitor fish from the waters of Cat or Finger lake, located in the township of Blair, district of Parry Sound, was continued. The purpose of the work in these instances is to increase the natural yield of speckled trout and bass by reducing competitor or predaceous fish in restricted environments.

A biological survey of Cat lake carried out in 1930 revealed that such a step was warranted. The work involved the removal of adult pike and maskinonge to the French river and the destruction of excessive numbers of turtles with which the lake was populated. Evidence of the depredations of these turtles was not wanting.

A study of the stomach contents of many hundreds of adult ling taken in lower Rideau lake and Otter lake, located in Lanark and Leeds counties, during the month of January revealed that they subsist on fish. Of one hundred stomachs examined by an assistant field biologist of the Department, ten per cent. contained small-mouthed black bass and the remainder some species of fish as food. It was observed that most of the fish were feeding after they had finished spawning.

To obtain a better idea of the voracity of ling, the following data are submitted by our field officers and the President of the Smith's Falls Game and Fish Protective Association:

Date	Weight in lbs.	Length in ins.	Sex	Stomach Contents
Jan. 6..........	8¼	..	female	3 small-mouthed black bass (7¾″, 4½″, 4¼″), and 3 alewives (2½″).
Jan. 8..........	7¾	..	male	1 large-mouthed black bass (9″).
Jan. 8..........	7	..	male	1 perch (5″), 1 sunfish (3½″), 12 fingerlings (1¼″–2″).
Jan. 11.........	8¾	..	female	1 large-mouthed black bass and 2 perch (all 6¾″).
Jan. 11.........	2¾	..	female	1 perch (6½″), 1 perch (5½″) and 5 other small fingerlings.
Jan. 14.........	...	34	male	1 ling (16″), 1 lake trout (7″).
Jan. 14.........	...	..	male	1 small-mouthed black bass (10″) and 1 perch.
Jan. 14.........	...	..	female	1 frog and 2 perch (5″).
Jan. 14 to Jan. 30	2½	..	female	2 perch (8″ and 5″).
....	8¾	..	male	1 large-mouthed black bass (6¾″), 2 perch (6″).
....	8¾	..	female	1 small-mouthed black bass (7¾″), 1 sunfish (4¼″), 1 alewife (2½″).
....	7¾	..	male	1 large-mouthed black bass (9″).
....	2½	..	female	1 lake trout (3½″), 2 lake trout (3″), 1 pike (7″).
....	...	30	female	1 small-mouthed black bass (10¼″).
....	8	..	male	38 small fish unidentified, ranging from 1½″ to 5″.
....	8	..	male	1 herring (7″), 1 perch (4″), 1 perch (5″).
....	8½	..	female	5 perch (4″), 2 pike (7″).
....	...	..	male	1 frog and 2 perch (4½″).

During the period December 22nd to January 30th, hoop nets and trap nets were set in suitable areas where ling were found to be running in large numbers in lower Rideau and Otter lakes, located in Lanark and Leeds counties. Our hatchery and field officers, through the kind and gratuitous assistance of the Smith's Falls Game and Fish Protective Association, succeeded in removing 4,108 adult ling, which weighed approximately 14,835 lbs.

Otter lake is in the neighbourhood of two and one-half miles long and three-quarters of a mile wide and from this small lake alone 2,246 ling were removed. Two hundred and ninety-five were removed from the waters of Wolf lake, near Westport, Leeds county, bringing the total ling removed from the region up to four thousand four hundred and three.

The fish were properly disposed of and contributed to the food supply of the needy of the district. The suitability of the flesh of the ling as food is unquestionable; its repulsive exterior is one great retarding factor in its general use. Recipes for cooking this fish may be found in papers prepared by Mr. Hugh D. Branion, now of Ontario Agricultural College, Guelph. Mr. Branion, while employed as an investigator in the Branch during the summer of 1930, carried out some important studies in connection with the marketing of ling and its edible qualities.

After biological inquiry, the removal of pike from Hilton lake, St. Joseph Island, was not considered feasible.

Permits were issued to transfer pickerel in the Kaministiquia river, below Kakabeka falls, to the waters above the dam, and certain officials of the Owen Sound Game and Fish Protective Association were permitted to transfer rainbow trout prior to their spawning season over the dam in the vicinity of Owen Sound, located on the Sydenham river, under the supervision of Departmental officers.

2. CLOSURE OF WATER AREAS

The importance, definition, and purpose of sanctuaries for fish, both game and commercial varieties, were pointed out in the Department's latest annual report and it is unnecessary to repeat here.

The work that the Department is doing in this connection may be found by referring to page 18 on which a list of closed waters and the conditions governing closure are given.

Special studies in this connection consisted of the following: (1) Possibilities of augmenting the supply of small-mouthed black bass in Lake Penage by the utilization of neighbouring lakes; (2) A further study of Deep Bay, Sparrow lake, in connection with closure for sanctuary purposes.

3. POLLUTION

Investigations in connection with pollution of waters by sewage and trade wastes were carried out in the following locations: Township of Tisdale, Cochrane district; Trent river and Bay of Quinte (Northumberland and Hastings); Grand river, Brantford; Thames river, Chatham and Wallaceburg.

Measures have been suggested for controlling pollution in these areas and in most instances we find that the recommendations are being faithfully tried out. This is particularly true in the case of effluents from sugar-beet plants, which are especially difficult to control.

4. SITES FOR HATCHERIES AND REARING STATIONS

During the year a study was made of a suggested site for bass ponds at Marmora. Ponds for rearing brown trout and large-mouthed black bass on the Government grounds of the Guelph Reformatory were also inspected. A spring creek at Haileybury for the establishment of a trout rearing station was investigated.

A few requests came from individuals desirous of developing streams and ponds on their own property as a private venture. These have asked for advice, which has been given gratis. On the other hand, if a survey was made, expenses covering the same were met by the individual. There is growing interest in the possibilities of developing ponds and streams along fish cultural lines.

5. OPERATIONS OF COMMERCIAL NETS

Studies in connection with the operation on an experimental basis of trap nets in Lake Huron and the operation of gill nets in Kenogamissi and adjacent waters in the vicinity of Timmins were undertaken.

6. WATER LEVELS

An investigation was made in connection with water levels on Loon lake, Lennox and Addington, township of Anglesea, and recommendations were suggested regarding the repair and operation of the dam at its outlet, which controls the water levels of the lake and the Skootemata river.

7. Dams and Fishways

A specific and organized study of dams and other barriers across water courses to determine the feasibility of introducing fishways was undertaken in the following counties and districts: Algoma, Cochrane, Frontenac, Grey, Haldimand, Haliburton, Lanark, Leeds, Manitoulin Island, Muskoka (2), Nipissing, Northumberland, Parry Sound (2), Simcoe and Thunder Bay (6).

FISH CULTURE

Successful fish culture depends on adequate and suitable water supplies, a knowledge of the food requirements of the fish, a knowledge of fish diseases and the manner in which they may be controlled and proper planting methods.

Experimental work in connection with the nutrition of trout was carried on for three successive summers by qualified university men. The results of some of these studies have been published eleswhere and when feasible their practical application has been effectively carried out.

Rearing fish to the early fry stage is a much simpler and easier process than that to large fingerling, yearling and adult stages. The reason for this is that in rearing larger fish in large numbers in restricted quarters, the problems of nutrition and disease present themselves. Extraordinary vigilance must be exercised at all times so that disease and parasitism may be controlled before they make any headway.

The importance of proper transportation and planting methods in connection with fish distribution is recognized and the results of careful supervision of these methods is apparent. Every care is taken to see that the waters supplied with fish are suitable for the species, and that the fish are actually deposited where they will have the advantage of proper food, proper shelter, and those environmental conditions which will ensure reproduction.

During the year a competent and qualified Biologist was placed in charge of the Sault Ste. Marie Trout Rearing Station.

Speckled Trout

A perusal of appendix 3, page 29, will give some idea of the progress made in the culture of speckled trout. A percentage increase in the distribution of 78.0 was made over that of the previous year and was due mainly to successful operations of two large rearing stations located at Dorion (Thunder Bay district) and Sault Ste. Marie. The former station was opened this year. Both stations were briefly described in the previous annual report of the Department, but it is not out of place to voice their virtues again. Both sites are excellent. There is an abundant supply of clear, cold water of constant temperature and with a good head. It is a commonly accepted principle that a fish rearing station should completely control the source of its water supply and at both stations this requirement, which is difficult to meet as a rule when a large volume of water is desired, is provided in a most remarkable manner. At Dorion the headwater springs forming a fan-like source, can be seen trickling out of a gently rising slope over a frontage of 150 feet approximately. Five to thirty feet back from the water's edge one can walk around the entire source on dry land. Besides the trickling springs forming the fan-like source, there are strong subterranean springs opening into the bottom of the supply reservoir or pond. These add their quota providing in all a flow of 4,000 gallons per minute, and the amazing thing is that this is over a distance of a few hundred feet. At this site the Provincial Government has completed a modern, well-equipped rearing plant capable of handling at least one and one-half million fingerling fish.

Excepting for the larger volume of water at Dorion, which is nearly three times that supplied by the Sault plant, the general plan of the latter station is similar. This plan was outlined in the Department's annual report for 1930. During the year two new ponds were constructed at the Sault Station in order to provide accommodation for various year classes of trout.

Suitable facilities for holding breeding trout are available at Dorion, Sault Ste. Marie and Normandale. For breeders, the fastest growing and healthiest schools are chosen. The matter of selective breeding is one which demands the best efforts at our command.

BROWN TROUT

The culture of brown trout is confined to ponds at Mount Pleasant and Codrington Trout Rearing Station, where a permanent breeding stock is maintained. Facilities are available at Kenora hatchery for handling a limited supply of brown trout eggs for the purpose of stocking certain lake trout waters in Kenora district, on an experimental basis.

Our stocking policy is restricted to definite locations which officials of the Branch consider suitable. These locations may be briefly described as follows:

(1) Streams which did contain speckled trout, but which no longer support a significant number of this species at present on account of the open character of the lands adjacent to the streams, which has affected the streams adversely for speckled trout.

(2) Lake trout lakes without tributary trout streams.

(3) Lake trout lakes with tributary trout streams suitable for spawning trout.

4. Regional planting in order to have a complex of diversified conditions for study.

Distribution of brown trout in the waters of the Muskoka river system in areas where they will not interfere with native speckled trout, is showing results.

The decrease in the quantity of fingerlings planted, namely, from 900,000 in 1931 to 628,060 in 1932 was somewhat counterbalanced by the distribution of 1,100 adults.

RAINBOW TROUT

Rainbow trout distribution increased from 183,000 fingerlings in 1931 to 216,235 fingerlings in 1932. The culture of rainbow trout is confined to the lower section of Normandale trout stream.

Land-locked lakes and heavy northern trout waters are chosen as suitable planting locations. A glance at the present and previous reports will give some idea of the extent of the distribution within comparatively recent years.

LAKE TROUT

The distribution of lake trout in 1931 amounted to 22,108,900 fry and fingerlings as against 16,258,800 in 1932, plus 150,000 eyed eggs.

Our collection of lake trout eggs depends on the operations of commercial fishermen when the fish are spawning. One important seat of spawntaking operations is the Georgian bay. Weather conditions in the fall of the year upset the best organized plans, and the collection is often adversely affected. This was the chief cause of the reduced collection and distribution in 1932. Spawntaking operations under the supervision of Wiarton, Southampton, Sault Ste. Marie and Port Arthur hatcheries were responsible for the bulk of the output. The organization of spawntaking operations at Belleville got away to a good start, but adverse weather conditions prevented its successful culmination.

Whitefish

The distribution of whitefish in 1931 amounted to 342,107,000 fry, plus 1,500,000 eyed eggs, whereas in 1932 the distribution amounted to 229,035,000 fry. Provincial fish hatcheries at Glenora, Collingwood, and Normandale, contributed in largest measure to the success of the year's output. Belleville, Kingsville and Kenora made satisfactory contributions.

Lake Herring

It is most interesting to note the satisfactory increase in distribution of lake herring since 1926. The successful operations at Glenora hatchery contributed most to the enlarged output in 1932, which was double that of the previous year.

Yellow Pickerel (Pike-Perch or Dore)

Successful pickerel operations at Kenora, Fort Frances and Sarnia hatcheries were responsible for the excellent showing in the distribution of fry, which amounted to 136,450,000 in 1931 as compared with 256,846,500 fry plus 1,000,000 eyed eggs in the spring of 1932.

Maskinonge

Maskinonge fry are reared artificially in a portable type of hatchery located on the Pigeon river, Omemee, each spring. In 1931 65,000 fry were distributed. The output was increased to 115,000 fry in 1932. A reference to appendices 1 and 3, pages 23 and 29 will give the details in connection with the distribution of this important game-fish.

Black Bass

The total output of pond-cultured black bass, both the large-mouthed and small-mouthed species, continues to show a creditable increase.

In addition to pond culture a number of lakes and one stream have been used as sources of supply for the purpose of re-stocking depleted bass waters of the particular region where these lakes and streams are located.

The following tables provide in detail information regarding quantities of black bass distributed from our ponds and from other waters as the result of harvesting:

Distribution of Large-mouthed Black Bass, 1932

	Fry	Fingerlings	Yearlings	Adult
Pond Cultured—				
Mount Pleasant	112,000	3,600	....	....
Harvested—				
Wiltse Creek	....	1,188	24	....
	112,000	4,788	24	....

Distribution of Small-mouthed Black Bass, 1932

	Fry	Fingerlings	Yearlings	Adult
Pond Cultured—				
Ingersoll Pond	....	9,900	2,350	161
Mount Pleasant	393,000	19,500	....	187
Harvested—				
Fox Lake	....	....	....	750
Green Lake	....	....	1,800	....
Lake on the Mountain	195,000	....	....	....
Little Gull Lake	....	....	2,700	....
	588,000	29,400	6,850	1,098

ADVISORY COMMITTEE ON GREAT LAKES FISHERIES

The outcome of the Fourth Great Lakes Fisheries' Conference, which was held at Buffalo, October 12, 1931, was the appointment by each State and the Province of Ontario of representatives to an Advisory Committee for the purpose of studying problems relating to the Great Lakes' fisheries and offering recommendations for the consideration of all the States and the Province concerned. It was thought that a committee could handle such matters more satisfactorily than an unwieldy conference.

Commissioner Morgenthau for the State of New York was designated to write to each of the participating States and the Province of Ontario to name one person to represent them respectively on the committee and the representatives appointed were as follows:

Michigan
F. A. Westerman, Fish Division, Department of Conservation, Lansing, Michigan.

Ohio
E. L. Wickliff, Chief, Bureau of Scientific Research, Division of Conservation, Columbus, Ohio.

Pennsylvania
P. H. Hartman, Superintendent, Erie Fish Hatchery, Erie, Pa.

New York
William C. Adams, Chief, Division of Fish and Game, Conservation Department, Albany, N.Y.

United States Bureau of Fisheries
Dr. John Van Oosten.

Ontario
H. H. MacKay, Biologist and Director of the Fish Culture Branch, Toronto, Ontario, Canada.

The first meeting of the Advisory Committee was held in the Museum of Natural History, Buffalo, June 22nd, and the second in the Reception Room of the Parliament Buildings, Toronto, December 2, 1932. The chief recommendations suggested by the Committee and applicable only to Lake Erie fisheries were:

(1) No gill net shall be more than 36 meshes deep, effective upon the enactment by all states and the province represented by contracting parties.

(2) There shall be a closed season from December 11th to the last day of February, both dates inclusive, during which period commercial fishing of all types shall be suspended.

(3) No gill net with mesh less than 4¾ inches shall be employed for the taking of whitefish and lake trout, effective January 1, 1934.

(4) The use of any gill net with meshes between 3⅛ inches and 4¾ inches shall be illegal, effective January 1, 1934.

(5) There shall be a closed season for sturgeon during the period, January 1, 1934, to December 31, 1938, both dates inclusive.

EDUCATIONAL ACTIVITIES

Officials of the Branch have been actively engaged in giving illustrated talks to game and fish protective societies and other organizations in connection with the work of the Branch, the interpretation of the fisheries' laws and the value and importance of conservation.

April 4th, 1933.

CLOSED WATERS

The following waters were closed to all fishing during the year:

Ada Lake—West of township of Stirling, district of Thunder Bay; closed to all fishing for a period of one year from January 18, 1932.

Ann Lake—West of township of Stirling, district of Thunder Bay; closed to all fishing for a period of one year from January 18, 1932.

Bass Lake—District of Rainy River, 2 miles north of Nestor's Falls, east of proposed Kenora-Fort Frances highway; closed to all fishing.

Current River—District of Thunder Bay; closed to all fishing until May 1, 1934.

Golden Gate Lake—West of township of Stirling, district of Thunder Bay; closed to all fishing for a period of one year from January 18, 1932.

Little Gull Lake—Lots 20-23, Concession X, township of Lutterworth, district of Haliburton; closed to all fishing.

Little McKenzie River and tributary creeks, including Mud Lake—District of Thunder Bay; closed to all fishing until May 1, 1935.

Muskie Lake—South of township of Haycock, district of Kenora, west of Kenora–Fort Frances highway; closed to all fishing.

Pearl River—District of Thunder Bay; closed to all fishing until May 1, 1935.

Ring Lake—West of township of Stirling, district of Thunder Bay; closed to all fishing for a period of one year from January 18, 1932.

Two Island Lake—Township of Jacques, district of Thunder Bay; closed to all fishing for a period of two years from May 4, 1932.

ACKNOWLEDGMENTS

In conclusion, I desire to publicly express my appreciation of the assistance and support which has been rendered to the Department throughout the year.

The members of the staff of both the inside and outside branches of the Service have performed any and all duties allotted to them in a faithful and zealous manner, and at all times there has been evident a spirit of loyal co-operation in the performance of the work of the Department.

Our work has been made more pleasant by reason of the assistance and co-operation supplied by the transportation companies and the various Fish and Game Protective Associations throughout the province, the officers and members of which latter organizations having at all times worked in conjunction with the Department and its various officers in an earnest endeavour to secure proper observance of the provisions of The Ontario Game and Fisheries Act.

All of which is respectfully submitted.

I am, Sir,
Your obedient servant,
D. McDonald,
Deputy Minister of Game and Fisheries.

APPENDIX No. 1

SPECIES AND QUANTITIES OF FISH PLANTED IN PROVINCIAL WATERS, 1932

SMALL-MOUTHED BLACK BASS

Fry

Addington:	
Long lake	5,000
Loon lake	5,000
Otter lake	5,000
South Beaver lake	5,000
White lake	5,000
Brant:	
Oakland ponds	3,000
Bruce:	
Cameron lake	5,000
Elgin:	
Dadson pond	5,000
Frontenac:	
Bobs lake	5,000
Black lake	5,000
Crown lake	5,000
Devil lake	5,000
Draper lake	5,000
Gull lake	5,000
Knowlton lake	5,000
Sharbot lake	10,000
White lake	5,000
Wolf lake	5,000
Hastings:	
Baptiste lake	2,500
Bass lake	10,000
North lake	5,000
Stimers lake	5,000
Stoco lake	5,000
Kent:	
Mitchell's bay	5,000
Lambton:	
Sydenham river	5,000
Leeds:	
Benson lake	5,000
Rideau lakes	15,000
Sand lake	5,000
Whitefish lake	5,000
Middlesex:	
Thames river	5,000
Muskoka:	
Clear lake	5,000
Leonard lake	10,000
Sand lake	15,000
Northumberland:	
Crow bay	5,000
Katchawanooka lake	5,000
Trent river	10,000

Parry Sound:	
Ahmic lake	10,000
Beaver lake	10,000
Bells lake	10,000
Caribou lake	5,000
Cat, or Finger lake	10,000
Cecebe lake	10,000
Clear lake (Patterson twp.)	10,000
Commanda Lake	10,000
Deer Lake (Lount twp.)	10,000
Doe lake	10,000
Driver lake	10,000
Jack's lake	5,000
Lake Bain	10,000
Limestone lake	10,000
Little Clam lake	10,000
Lorimer lake	10,000
Magnetawan river	10,000
Mary Jane lake	10,000
Otter lake	15,000
Pickerel lake	10,000
Pickerel river	10,000
Pine lake	5,000
Powell's lake	10,000
Rainy lake	15,000
Restoule lake	10,000
Stanley lake	5,000
Wilsons lake	10,000
Peterborough:	
Belmont lake	5,000
Chemong lake	2,500
Jack's, or White lake	5,000
White lake	5,000
Prince Edward:	
Consecon lake	5,000
East lake	5,000
Roblin's lake	5,000
West lake	5,000
Simcoe:	
Lake Couchiching	10,000
Little lake (Vespra twp.)	2,500
Severn river (Gloucester pool)	10,000
Victoria:	
Mud lake	5,000
Oak lake	5,000
Swamp lake	5,000
Waterloo:	
Grand river	15,000
River Nith	2,500
Wellington:	
Puslinch lake	10,000
York:	
Black river	10,000
Total	588,000

SPECKLED TROUT DISTRIBUTION, 1932

Length in Inches	Quantity
Eggs	23,400
Fry	256,500
1 inch	728,500
1¼ inches	147,500
1½ inches	136,025
1¾ inches	46,900
1 to 2¼ inches	327,500
2 inches	646,000
2¼ inches	512,511
2½ inches	636,280
1½ to 2½ inches	856,000
2 to 3 inches	143,500
2 to 5 inches	78,615
3 inches	70,773
3 to 4 inches	360,000
4 to 7 inches	66,462
7 to 10 inches	1,010
6 to 8 inches	22,850
14 to 16 inches	1,650
18 to 20 inches	140
	5,062,116

APPENDIX No. 3

DISTRIBUTION OF FISH ACCORDING TO SPECIES, 1931–1932

	1931	1932
Lake trout, eyed eggs		150,000
Lake trout fry and fingerlings	22,108,900	16,258,800
Speckled trout, eyed eggs	50,000	23,400
Speckled trout, fry and fingerlings	2,724,003†	4,891,389
Speckled trout, yearlings	68,837	144,512
Speckled trout, adults		2,815
Rainbow trout, fry and fingerlings	183,000†	216,235
Rainbow trout, yearlings	10,925**	
Brown trout, fingerlings	900,000	628,060
Brown trout, adults		1,100*
Small-mouthed black bass fry	332,500	588,000
Small-mouthed black bass, fingerlings	92,985	29,400
Small-mouthed black bass, yearlings	‡5,919	
Small-mouthed black bass, adults	232	7,948††
Large-mouthed black bass, fry	35,000	112,000
Large-mouthed black bass, fingerlings	18,640	4,788
Large-mouthed black bass, yearlings	3,943	24††
Maskinonge, fry	65,000	115,000
Pickerel, eyed eggs		1,000,000
Pickerel, fry	136,450,000	256,846,500
Whitefish, eyed eggs	1,500,000	
Whitefish, fry	342,107,000	229,035,000
Herring, fry	36,395,000	75,000,000
Herring, eyed eggs		100,000
Golden Shiners		1,400
Perch	400	
Miscellaneous	1,000	
Total	543,053,884	585,156,371

†Fingerlings only.
‡One to four years.
**11 months.
*Yearlings.
††Yearlings and adults.

REPORT OF THE DEPUTY MINISTER OF LABOUR

To the Honourable J. D. Monteith,
Minister of Public Works and Labour.

Sir,—I have the honour to submit the Thirteenth Annual Report of the Department of Labour dealing with activities for the fiscal year 1931-32.

The general unfavourable industrial conditions prevailing in Ontario in 1931 continued and were more pronounced during the fiscal year 1932. The reports compiled by the Dominion Bureau of Statistics from data received from approximately 3,500 firms throughout the province showed further contraction in the volume of employment. The average index number of employment in Ontario for the fiscal year 1932 was 91.1, as compared with 103.1 for the previous year, a decline of 12 points. At the end of the year the index stood approximately 42 points lower than at the close of the year 1929. For each month of 1932 the index was lower than that of the corresponding month of 1931 and was also lower in each of the thirteen divisions covered by the figures.

In manufacturing, the greatest curtailment was recorded in the iron and steel industries with lumbering products second. The textile industry showed the smallest loss in the numbers employed, and on October 1st the index number was nearly four points in advance of that for October 1st of the previous year.

Great reductions were made throughout the year in logging camp activities, the index number reaching the extremely low level of 9.3 on October 1st, as compared with 25.6 and 55.2 on October 1st of 1931 and 1930 respectively. The highest levels of employment were maintained in the services, mining, and trade groups, with average indexes of 134.3, 123.1 and 122.8, although they were all considerably lower than the 1931 levels. In construction, considerable expansion was indicated for the first half of the year due to unemployment relief work on the highways which provided employment for many additional men. When these relief schemes ceased to operate, the volume of employment in this industry dropped much below last year's level, ending the year with the index standing approximately 47 points lower than for October, 1931.

The census returns for June 1, 1931, show that out of 2,564,879 persons in Canada classified as wage earners, 471,668, or 18.39 per cent., were unemployed. The number of unemployed in Ontario at that time is given as 160,036, or 16.93 per cent. of the total classified as wage earners. Of the female wage earners in the province, 17,850, or 8.4 per cent., were unemployed. The average employment index number for June, 1931, in Ontario was 104.2, whereas the index number for June, 1932, was 89.9, and for October, 1932, it was 86.1.

According to figures supplied to the Dominion Government each month by trade unions, the percentage of unemployment among their members averaged 22.5 for the fiscal year 1932, as compared with 16.5 for 1931, an increase of six points. Each month of 1932 showed a larger percentage of unemployment than the corresponding month of the previous year.

The foregoing statistics indicate a continued downward trend in the number of persons employed but do not give, nor are they intended to give, a complete picture of the extent of unemployment and of industrial conditions. The index numbers do not make allowance for expansion in the various industries since 1926 nor for changes in population.

The exact number of persons out of work at any time during the past year is unknown, and no figures are available to indicate the amount of lost time and decreased earnings due to partial or part-time employment. Decreases in salaries and wage rates, together with lost time due to temporary shutdowns, layoffs, reduced hours, and part-time employment of various kinds, have greatly reduced the purchasing power of a large percentage of those who are reported as being employed. When such persons are ultimately dismissed or laid off they have little, if any, reserves and are soon dependent upon charity or state relief.

Many factors have contributed to the increase in unemployment and the situation has become so complicated that it is impossible to predict the immediate future. The prospects of employment appear to be growing less. Young men and women being graduated from schools and colleges are faced with problems which call for immediate attention on the part of all concerned if these young people are to be saved to the state as productive workers.

Some idea of conditions in the building industry may be gained from the value of building permits issued in thirty centres in Ontario. In 1932 the value of these permits amounted to $19,925,683, as compared with $45,118,069 in 1931, a decrease of 55.8 per cent. In 1931 a decrease of 41 per cent. was reported as compared with 1930.

It has been estimated by officials of organized labour that less than 10 per cent. of the mechanics in certain trades in some of the larger centres are employed on construction work. Prospects for the coming year indicate that the amount of building operations to be undertaken in the province will not exceed 10 per cent. of that carried on in recent years. This estimate is endorsed by representatives of the larger contracting firms.

Many contractors are being forced into liquidation and the outlook for the current year is such that representatives of manufacturers, supply dealers, contractors, architects, engineers and organized labour have decided to call conferences of all concerned in an effort to work out a programme and make suggestions to the governments which it is hoped will stimulate employment and improve conditions generally.

The prolonged period of depression has greatly increased the problems of industrial relations due chiefly to reduced wage rates. During the month of February, 1932, the Department of Labour was requested to arrange for a meeting of employers and representatives of organized labour in the dressmaking industry in Toronto, in an effort to avert a strike. A joint conference was held, but it was found that no group of individuals could negotiate on behalf of employers and the situation was such that no basis of agreement could be found. The strike was called, a deplorable condition resulted for a few weeks, temporary adjustments were made, but the general situation has not been improved.

The demand for cheap clothing on the part of the public, which may be attributed to decreased purchasing power, has resulted in buyers arbitrarily setting a price on garments which forces the manufacturer to sell at a loss. Where the business is such that he cannot afford to lose it, the manufacturer feels compelled to accept these prices and is then forced to further reduce manufacturing costs which have already been cut to the limit. In one plant, where girls and women were found working at night without a permit, the inspector had difficulty in compelling them to leave the factory, their excuse being that unless they worked overtime they could not earn enough to pay their meagre living expenses. They were afraid to complain for fear of losing their jobs at a time when no other work was available.

Such conditions are not confined to the clothing industry. Information at hand indicates that skilled men in certain furniture manufacturing plants are working for less than the minimum wage rates for girls. Complaints are frequently received from men and boys in various other occupations who are working for wages which do not cover the cost of board and lodging.

A few employers anxious to maintain at least a living wage for their employees have requested that *The Minimum Wage Act* be applied to men and boys. They claim that unless competitors are compelled to pay minimum rates, they must either close their factories or adopt the vicious practice of lowering wage rates to meet competition and operate the plants only as orders are received.

The report of the Minimum Wage Board, which is printed under separate cover, indicates the difficulties in maintaining minimum wages rate for girls and women, despite the fact that the cost of living has decreased by less than $1.00 per week since the date on which the rates were established. The policy of the Board is to maintain existing rates, rather than to establish the practice of varying the rates with changes in the cost of living or according to industrial conditions. Most employers agree that stability is more to be desired than fluctuating rates which would make it extremely difficult to estimate costs.

Stability and prosperity in industry can be achieved only when all parties concerned work together and are prepared to make sacrifices for the common welfare. It would seem that, apart from whatever efforts may be made to revive international trade and adjust monetary systems, some attempt must be made to organize industries for co-operative action designed to provide more employment. If additional work cannot be created, it is evident that shorter working hours with at least a living wage and a wider distribution of available work must be brought about if the burden of unemployment relief is to be kept within bounds.

The time has come when industry should cease to regard labour merely as a commodity and should fully recognize the interdependence of all groups participating in the production of industrial wealth. The practice of discharging employees as soon as their labour ceases to be profitable is no longer justifiable. If this practice is continued, thereby transferring the burden of unemployment to the State, the resulting increases in taxation will undoubtedly react to the further disadvantage of industry and the community at large.

Expenditures of the Ontario Government on unemployment relief during the past fiscal year amounted to approximately $14,000,000 of which about one-half was spent on work relief, mostly in the nature of highway construction and aid to municipal public works. The expenditures from the Provincial Treasury on this account during the previous year were less than $5,000,000. The rapid increase in the cost of this work, together with the necessity for rigid economy, has brought about a change in policy, so that during the current year practically all relief expenditures will be confined to assisting the municipalities in providing direct relief to those unemployed persons who require assistance for the maintenance of life.

The administration of the funds provided for this purpose is entrusted to a special committee of the Cabinet of which the Minister of Labour is Chairman. Expenditures are reported through the Department of Labour, but all activities are carried on through the office of Mr. J. A. Ellis, Secretary of the Committee and a Commissioner of the Railway and Municipal Board.

Despite increasing unemployment and generally unfavourable conditions, a spirit of hope and unfailing confidence in the future pervades all ranks of industrial workers. Everyone is assured of the necessities of life and it is felt that a turn for the better will come soon. Industrial leaders have ceased to look for prosperity just around the corner, and there is a growing determination to face facts and take steps to adjust the industrial system to new conditions.

LEGISLATION

During the 1932 session of the Ontario Legislature several laws were enacted affecting the legislation administered by the Department of Labour. *The The Factory, Shop and Office Building* Act was revised and certain changes and additions were made affecting the working hours for females and youths in shops and restaurants, providing for a double shift system for youths, girls and women, and for regulations regarding the manufacture, sale or distribution of industrial substances containing lead and benzol. *The Stationary and Hoisting Engineers Act* was amended and the name changed to *The Operating Engineers Act.* Amendments were made to *The Apprenticeship Act*, *The Steam Boiler Act*, and *The Minimum Wage Act.* The terms of these new Acts and the effects of the changes are indicated in the reports of the Minimum Wage Board and the branches concerned. *The Department of Labour Act* was amended to conform with changes in other legislation, to clarify the scope of the activities of the Employment Bureaux, and to authorize inspectors to shut down work being conducted in such a manner as to be dangerous to life or property.

In addition to the legislation administered by this Department, *The Industrial Disputes Investigation Act* was passed by the Legislature, becoming effective August 15th, 1932, by proclamation. The amendment to the *Dominion Industrial Disputes Investigation Act*, adopted during the parliamentary session of 1925, restricted the application of the Act to disputes in connection with works, undertakings or business which are clearly within the legislative authority of the Parliament of Canada, but enabled its application to disputes within the exclusive control of any province having the requisite provincial legislation. The new Act is in the form of enabling legislation giving effect within the province to the provisions of the Dominion Act, excluding from its application, however, any commission, the members of which are appointed by the Crown.

In July, 1932, an application was made for the establishment of a Board of Conciliation and Investigation by certain employees of the London Street

Railway Company, members of Division No. 741, Amalgamated Association of Street and Electric Railway Employees of America, following a dispute with the company regarding the matter of reduction in wages. As *The Ontario Industrial Disputes Investigation Act* had not been proclaimed at that time, a Board of Conciliation and Investigation could be established only with the full concurrence of both parties to the dispute, and this the company refused. On August 10th the Ontario Act was proclaimed to take effect August 15th, and upon a new application a Board was established after an endeavour had been made to adjust the matters of dispute through conciliation.

The items of the dispute were a violation by the company of an existing agreement with its employees and a proposed reduction in wages by the company. The report of the Board recommended "that the agreement be restored to its position before the reduction was made and the employees be paid the wages withheld by virtue of that reduction," and "that the wage rate in the agreement which prevailed in 1932, before July 1st, should continue."

Employment Service

In the administration of the Ontario Government Employment Offices, the Department of Labour of Ontario co-operates with the federal Department of Labour under the terms of *The Employment Offices Co-ordination Act*, these offices composing the largest provincial unit of a Dominion-wide organization, the Employment Service of Canada. From an appropriation of $150,000 the federal Department of Labour reimburses the provinces in proportion to their expenditures on employment office administration and operation. The total payment to Ontario in 1932 amounted to 29 per cent. of the gross expenditure in maintaining these offices in the province for the year. It is apparent that very great advantage is accruing in the operation of such a scheme which provides for uniformity of methods in the various provinces and for complete interchange in the matter of workers and employment opportunities through the federal clearing house. In addition, the federal Department undertakes considerable responsibility in the matter of specialized employment work on behalf of handicapped ex-service men in some of the larger centres. Full details of the scheme are contained in the report of the General Superintendent of the Ontario Government Offices.

During the fiscal year 1932 the placements made by the Ontario offices totalled 181,533, of which 131,220 were for work of a casual nature, that is for working lasting not more than seven days, and 50,313 were for regular employment. The vacancies reported numbered 188,264 and the applications 317,514. The fact that over 72 per cent. of the number of placements were casual is largely due to the system of rotation of workers on the various relief schemes undertaken by the province and by municipalities.

For every 100 applications there were approximately 59 vacancies and 57 placements, as compared with 62 vacancies and 65 placements in 1931.

Boiler Inspection Branch

According to the twentieth annual report of the Boiler Inspection Branch, 311 designs of steam boilers, air receivers and other pressure vessels constructed for use in the province were certified, registered or re-registered, as compared with 401 the previous year and fifty-five such designs were returned to the manufacturers for revision. The number of inspections for new pressure vessels totalled 303 first, 138 second, and 243 final inspections, and 1,240 first and 196 final inspections were made of used pressure vessels. Of this number, 779 were annual inspections of boilers and pressure vessels which were inspected by request, although not coming within the jurisdiction of *The Steam Boiler Act.* This is an increase of thirty-four over the previous year. Investigations of nine explosions were made by the Boiler Inspection Branch during the year.

The total amount of moneys transmitted to the Treasurer was $12,623.66, as compared with $16,012.20 in 1931.

Board of Examiners of Operating Engineers

The Board of Examiners of Operating Engineers reported 17,505 certificates issued during the fiscal year, as compared with 18,200 in 1931. Of this number, 1,429 were issued upon examination or re-examination, 11 were provisional, 12 were duplicates, 151 were plant registration certificates, and 15,902 were renewals.

The number of candidates examined during the year totalled 1,717, as compared with 2,198 the previous year. Of this number, 765 were examined at the Toronto office and 952 at outside centres where 83 examination sessions were held. The candidates for examination were divided as follows: 857 for fourth-class certificates, 404 for third, 169 for second, 42 for first, 122 for hoisting, 74 for traction, and 49 for firemen's certificates.

The Board is performing a very useful service to the operating engineers of the province in compiling text-books on power plant operation, three of which have already been issued, namely, "Boilers," "Engines, Turbines and Condensers," and "Beginner's Book on Power Plant Operation." These books are sold at cost to engineers desiring to qualify for advanced certificates.

The net revenue for the year amounted to $25,383.11 as compared with $25,890.97 in 1931.

Factory Inspection Branch

The Factory Inspection Branch has been in operation for 46 years and is the oldest of the branches now forming the Department of Labour. The annual report of this branch indicates greater endeavour on the part of the inspectors to ensure proper standards of working conditions in the province. Altogether 23,148 inspections and revisits were made, being 1,209 more than the previous year. There was also an increase of 536 in the number of establishments visited, making a total of 14,830 plants which reported 270,102 employees on the pay rolls.

Fewer permits were considered necessary during the year, 1,345 being granted, as compared with 2,031 the previous year. Thirty-one of these permits were granted under the new section 33 of *The Factory, Shop and Office Building Act,* permitting the employment of a double shift of eight hours each for female workers and youths in factories. The orders issued relating to various requirements of the Act totalled 4,986 which was 49 fewer than in 1931. It was found necessary to take proceedings against two firms, one under section 59 of the Act which deals with elevators and hoists and one under section 60 which deals with fire prevention and protection. In both cases convictions were recorded.

Twelve explosions which caused the death of four employees and injuries to three others were reported to the branch during the year. The number of accidents reported was 1,504, as compared with 3,256 in 1931. There were 35 fatalities during the year. The factory inspectors made special enquiries regarding safety committees or other forms of safety organizations in operation in the various industrial firms inspected and reported on 56 such safety organizations.

Apprenticeship Branch

The continued decline of business in the building industry gave rise to greater problems in connection with the administration of *The Apprenticeship Act*. The difficulty of finding employers for boys seeking to be indentured in the designated trades resulted in a decrease in the number of new registrations for the year, the total being 86, as compared with 142 in 1931. Many employers were unable to provide apprentices already indentured with steady employment, or could have done so only by laying off old employees, married men with families, whom they felt had the first claim to any work available. Fewer cancellations were reported, the number being 27, as compared with 50 the previous year and completions numbered 263, as compared with 230. At the end of the year there were 826 active contracts, as compared with 1,030 at the close of 1931. Day classes for the first and second year apprentices were held in Hamilton, Toronto and Ottawa during January and February with an attendance of 263, as compared with 314 the previous year. In spite of this decline excellent work was accomplished through these classes in supplementing the practical experience and training the boys received while working on the job.

In the year 1931, 2,840 employers were assessed to the amount of $32,852, of which over 88 per cent. was collected. In 1932, assessment notices were sent to only 2,691 employers and the returns submitted showed such a decrease in the amount of pay rolls that it was decided to suspend assessment rather than impose any additional expense on employers. The necessary charges in connection with day classes in January and February, 1933, will be paid from a surplus of $19,250 in the assessment fund.

While depressed business conditions made it impossible to extend the work of this branch, a great deal was accomplished during the year in placing it on a more satisfactory basis. The Act and regulations were modified to meet changing conditions in the building trades. The Apprenticeship Board was established and the courses of instruction for the day classes were improved. It is anticipated, therefore, that rapid advance will be made in developing the apprenticeship scheme along lines acceptable to the construction industry when conditions improve.

Inspection of Caisson and Tunnel Work

During the past year a considerable amount of tunnel and caisson work was done throughout the province with very satisfactory results as regards sickness and accidents. There is no doubt that the Regulations Respecting the Protection of Persons Working in Compressed Air, Tunnels, or Open Caissons have helped materially both workers and contractors on work of this nature, especially where the use of compressed air is involved.

Several caissons were sunk, ranging in diameter from 6 feet to 33 feet, necessitating the use of compressed air at pressures from 15 lbs. to 40 lbs. per square inch and no serious accidents occurred on this work.

Tunnels to the extent of some 60,000 feet were completed and the total number of men engaged on this work was approximately 800, working in three 8-hour shifts. Taking into consideration the hazardous conditions under which a large portion of the work was done, it is very gratifying to report that only one explosion occurred with no serious results, while only four men received minor injuries due to other causes.

The following table contains data on some of the jobs under the supervision of the Caisson Inspector:

Tunnels— Nature of Excavation	No. of Men	Air Pressure	Accidents
Dirt and rock	80	13 lbs.	4 minor
Rock	75	None	None
Shale	500	None	5 men (Explosion—Not serious)
Dirt and sand	40	9 lbs.	None.
Caissons—			
Shale—33 ft. diameter 100 ft. depth	40	30 lbs.	4 slight cases of bends
Clay—73 caissons 4 ft. 6 in. to 6 ft. 6 in. diameter. 53 ft. depth.	30	None	None

Safety Engineer

The activities of the Safety Engineer were varied for the fiscal year 1932. He collaborated with the Department of Public Works in designing and building a sound machine which is in daily use in the class-room of the Belleville School for the Deaf. With the aid of this instrument, approximately 40 per cent. of the pupils are able to hear distinctly and an additional 40 per cent. to hear fairly well so that it is now possible to teach them to speak.

The Safety Engineer also assisted the Motion Picture Bureau in designing and building sound equipment to be used with motion picture projectors. Two educational pictures with sound were prepared for use at the Canadian National Exhibition and elsewhere. These pictures show some of the activities of apprentices indentured under *The Apprenticeship Act* and illustrate the work of the Steam Boiler Branch, showing the manner in which the work of inspection is carried out. Assistance was also rendered the Department of Health in the development of special apparatus for its use.

The Safety Engineer was responsible for setting up and managing the exhibit of the Department of Labour at the Canadian National Exhibition. A special feature this year was the exhibit of the International Labour Office sent from Geneva, depicting some of the activities of this world-wide organization, especially those relating to the employment of children. This display attracted considerable attention and was the means of stimulating interest on the part of many spectators in the work of the League of Nations.

CHANGES IN PERSONNEL

It is with regret that we have to report the deaths of three men connected with the work of the Department. In April, 1932, the death occurred of Dr. J. W. Macmillan, Chairman of the Minimum Wage Board since its inception in 1920. Reference to the valuable services of Dr. Macmillan in connection with the administration of *The Minimum Wage Act* of Ontario is being made in the annual report of the Board. Mr. R. F. Tait, who served as a clerk in the stock room of the Department for eight years, died in December, 1931, and Mr. H. J. Tutt, Factory Inspector, who was superannuated in 1926, died in January, 1932.

Mr. R. A. Stapells, who has been a member of the Minimum Wage Board from the beginning, was appointed Chairman on May 1, 1932. Colonel William Rhoades and Major P. S. Robinson of the Veterans' Employment Bureau were transferred to the Welfare Department, November 13, 1931.

Within the Employment Service, Mr. H. Power was transferred from Oshawa to become superintendent of the Fort William office; Mr. D. Murphy of Fort William became acting superintendent of the Fort Frances office; Mr. J. F. Marsh, Deputy Superintendent in the Toronto office, was promoted to succeed Mr. Dobbs; and Mr. A. E. Woods was appointed as Superintendent in Sudbury, replacing Mr. Manor.

Mr. W. H. Barrett was appointed inspector in the Boiler Inspection Branch in place of Mr. Hunter.

Several changes were made in the clerical staff of the different branches, the policy being to fill vacancies wherever possible by promotions or transfers within the Department.

The abnormal conditions in industry coupled with the necessity for rigid economy in expenditures, have increased the problems and difficulties of all officials in the Department without materially decreasing the volume of work. It is very gratifying, therefore, to report that in all branches and offices a spirit of co-operation and devotion to duty has been manifested which has enabled the Department to function satisfactorily with reduced expenditures.

I have the honour to be, Sir,

Your obedient servant,

A. W. CRAWFORD,
Deputy Minister of Labour.

Ontario Government Offices, Employment Service of Canada

General Superintendent—H. C. Hudson

The fiscal year ending October 31, 1932, was the sixteenth in which the Ontario Government has carried on public employment work in this province and the fourteenth in which co-operation has been maintained with the federal Department of Labour and with all the other provinces in the Dominion except Prince Edward Island.

The primary function of the Employment Service is to bring together with the minimum of delay and without direct cost to employer or worker, the man or woman seeking a job and the employer seeking workers. The part played by the federal Minister of Labour as defined in *The Employment Offices Co-ordination Act* (Chapter 57, R.S.C. 1927) is as given below:

(*a*) To aid and encourage the organization and co-ordination of employment offices and to promote uniformity of methods among them;

(*b*) To establish one or more clearing houses for the interchange of information between employment offices concerning the transfer of labour and other matters;

(*c*) To compile and distribute information received from employment offices, and from other sources, regarding prevailing conditions of employment.

The Ontario Government maintains complete autonomy in connection with the public employment work carried on in this province but receives from the federal Government subventions which this year amounted to 29 per cent. of the gross expenditures in maintaining the offices. In view of the close co-ordination of effort which is attained under this arrangement, the Employment Offices of several provinces and the federal Clearing Houses are commonly considered as a single organization known as the Employment Service of Canada.

The annual agreements between the federal Minister of Labour and the several provincial governments, concluded under the terms of the Act, provide that the province in the operation of its employment offices shall register all applicants offering themselves for employment and undertake to locate suitable workers for all employers listing vacancies, without charging any fee or commission either to employer or employee. The province further agrees that the officials of the Employment Service shall accept no responsibility with respect to rates of wages or other working conditions offered or asked, but shall merely communicate the information available on these subjects to the applicant or the employer, as the case may be. It is also agreed that where employment is reported to be affected by an industrial dispute, employees being referred to such employment shall be notified of this fact. Another important provision of the agreement is that the province shall make a special endeavour to place in suitable employment handicapped men suffering from the effects of active service during the war. In the agreement the provinces undertake to furnish the federal Department of Labour with information relative to the transactions of the offices, industrial information, and the like. The federal Department of Labour is authorized to inspect the provincial Employment Offices from time to time, to determine whether the conditions of the agreement are being respected.

Every office of the Employment Service offers facilities for both men and women who are seeking work in any occupation, and for employers seeking any sort of help. Obviously, it is neither practicable nor advisable to segregate the various functions of the offices at all centres, but when the volume of work warrants it, and where the population to be served is of sufficient magnitude, such division of functions is made, and men's and women's skilled and unskilled, farm, factory and domestic, etc., divisions are operated separately. Employment service work was carried on in Ontario throughout the entire year in twenty-eight centres and, in addition, temporary offices were opened during the winter of 1931-32 at Arden, Kaladar and Sharbot Lake to deal with the placement of some 2,000 men on the extension of No. 7 Highway. On account of the lack of employment at Cobalt, the office at that point was closed in the month of June, 1932.

For the purpose of co-ordinating the efforts of the various local offices and to facilitate the transfer of any kind of labour from districts over-supplied to those where a dearth exists, eight clearing houses have been established throughout Canada. Those for provincial clearance, operated by the provincial Governments as part of the Employment Service of Canada, are situated at Montreal, Toronto, Winnipeg, Regina, Edmonton and Vancouver. Those for interprovincial clearance, operated by the federal Department of Labour in the interests of the Employment Service of Canada are: Eastern Clearing House, Ottawa; Western Clearing House, Winnipeg.

The federal Government pays the full salaries of five men in Toronto and one in Ottawa whose duties are to exert special efforts on behalf of handicapped veterans of the War in pursuance of the agreement between the federal and provincial Governments. This specialized service was carried on by the Department of Soldier's Civil Re-establishment until 1923-24, when the federal Department of Labour assumed this responsibility and incorporated it into the Employment Service of Canada.

Commenting upon the excellent co-operation which exists between federal and provincial Government authorities throughout Canada, the Director of the Employment Service writes as below in the fourteenth report of the Employment Service Branch of the federal Department of Labour:

> "The general observations made on this phase of the work of the Employment Service in preceding Annual Reports may well be repeated this year. The assistance given by the provincial authorities in connection with the placement of handicapped ex-service men has been whole-hearted and substantial, and demonstrates the degree of success encountered in all directions in dominion-provincial co-operation through the Employment Service."

For some years the Employment Service has provided a regular channel of information for the Department of Immigration and Colonization relative to the availability of labour in Canada as a condition affecting the admission of workers from outside of Canada. Since the passing of Order-in-Council P.C. 1413 in August, 1929, under which workers entering Canada under contract of employment must secure special authority from the Minister of Immigration, the Employment Service Branch of the Department of Labour has been consulted by the Immigration Department on numerous occasions in this connection. The procedure of the Employment Service is to endeavour to locate suitable workers in Canada willing to accept the employment offered, and after the lapse of a reasonable time the Immigration Department is notified of the success or otherwise of the Employment Service's efforts. While some hundreds of these cases usually are dealt with each year, due to economic conditions obtaining and the more rigid regulations in respect to entry which were in force, the number of cases up for consideration showed a substantial falling off during the last year. The final decision as to admission rests with the Department of Immigration, and in this regard the Employment Service is primarily a fact-finding agency.

While the offices of the Service are located at points of chief industrial activity, the facilities afforded are not only utilized locally, but each office supplies a considerable number of workers to the contiguous districts. Out of the total of 419,407 placements affected throughout Canada in 1931–32. 61,268 were made outside of the centres in which the offices are situated.

Since 1919 the railways have accorded to *bona fide* applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally, a concession involving a reduced fare. This privilege is affective on the following railroads: Canadian National, Canadian Pacific, Dominion Atlantic, Michigan Central, Temiskaming and Northern Ontario, and the Wabash. The reduced rate is for a second-class fare at 2.70 cents per mile, obtainable on the surrender of a certificate secured at the employment office. A minimum fare of four dollars is stipulated, so that a person travelling to employment at a distance where the reduced rate does not amount to the minimum is not able to derive the benefit therefrom. Of 4,866 reduced transportation certificates which were issued in Canada during the twelve months ending March 31, 1932, 1,652 were utilized in Ontario.

On page 19 will be found a table showing the vacancies, applications and placements of the Ontario Employment Offices during the fiscal year 1932.

It is difficult if not impossible to analyse this table on any basis of comparison with any other year in the history of the Employment Service, except possibly 1931. This difficulty is due to the fact that offices which co-operated with municipal authorities in the placement of relief workers on a rotating basis show a larger number of jobs filled than in normal years. If one were to judge from the table alone, accordingly, the impression might be gained that employment opportunities had been plentiful in Brantford, Kingston, and Oshawa, where, as a matter of fact, the reverse was true and the municipalities were forced to provide employment for a very high percentage of their citizens.

The table is significant, however, in the information it supplies regarding the number of applications for employment. The total, 317,514, indicates the extent to which the Employment Service is utilized by the citizens of the province in their search for work, and provides adequate evidence that the employment offices are regarded by the citizens generally as the logical centre to which application should be made for work either in good times or bad.

VACANCIES, APPLICATIONS AND PLACEMENTS, FISCAL YEAR 1932

Offices	Vacancies	Applications	Placements		
			Regular	Casual	Totals
Arden	879	1,119	879	......	879

Totals, 1928	175,870	212,422	97,217	56,566	153,783

The placement of handicapped ex-service men receives special attention in the offices situated in the larger centres throughout the province. The following table shows applications and placements in ten centres:

Office	Applications	Placements
Brantford	95	89
Fort William	6	2
Hamilton	411	122
Kingston	138	11
London	55	4
Ottawa	724	362
Peterborough	5	1
St. Catharines	20	9
Toronto	4,312	1,946
Windsor	23	1
Total	5,789	2,547

As stated in previous reports, one of the most interesting features of the work of the Employment Service of Canada has been the development of an inter-office clearance system through which men are transferred from one section of the province or the Dominion to another district to fill positions for which local labour is not available. During 1930, 3,933 such placements were made; in 1931, 880; and 1932, 628. This noticeable reduction is merely another reflection of the general industrial and agricultural conditions in Ontario throughout the year. Particulars regarding the transfers are as follows: farming, 80; logging, 214; mining, 18; manufacturing, 47; construction, 76; transportation, 28; services, 165; total, 628.

TRANSFERS CLASSIFIED BY OFFICES

Brantford	9
Cobalt	57
Fort William	61
Guelph	2
Kingston	50
Kitchener	6
Niagara Falls	12
North Bay	148
Pembroke	1
Port Arthur	22
St. Catharines	1
St. Thomas	1
Stratford	1
Timmins	1
Toronto (Men)	29
Toronto (Women)	142
Windsor	85
Total	628

Winnipeg, rather than Toronto, has always been regarded as the logical centre for securing workers required in the western section of the province beyond the number available locally. Realizing this fact, the Ontario and the Manitoba Government Offices of the Employment Service of Canada have always maintained close co-operation and each annual report includes a statement of the transfers into the western section of Ontario from Winnipeg. The figures in this connection for the fiscal year ending October 31, 1932, are given below and represent the smallest number of transfers effected since the inauguration of the Employment Service: farming, 21; logging, 272; manufacturing, 2; transportation, 2; services, 41; total, 338.

In July, 1931, the Premier of the province, Hon. G. S. Henry, announced the intention of the Government to establish road building camps in Northern Ontario for the purpose of providing relief employment for a large number of citizens who would otherwise be out of work during the winter months. It was decided to use the services of these men in improving and constructing certain links in the Trans-Canada Highway, and in the construction and improvement of various secondary roads throughout Northern Ontario.

To the Ontario Government Offices of the Employment Service of Canada was assigned the task of transferring the workers from their homes to the various road building camps. Between October 1, 1931, and April 30, 1932, 14,400 men were supplied to the Northern Development Department by the Employment Service. The municipalities from which men were to be selected were designated by the Ontario Government Unemployment Relief Committee, of which the

Hon. J. D. Monteith was chairman, and Mr. J. A. Ellis, secretary. Men were taken from 145 municipalities and in every case parties were organized and escorted to their destination by representatives of the Employment Service. The municipalities involved were asked to nominate the men to fill their respective quotas and the representatives of the Service conducted the registration and supervised the medical examinaton required by the Government before they were allowed to proceed to the camps.

Where parties passed through Toronto on their way to Northern Ontario, they were escorted to this city by the superintendent of the nearest employment office, and were checked by representatives of the Toronto Office and the General Superintendent before being turned over to an escort to conduct them to their destination.

The escorts were selected from among the ranks of the unemployed and included former army officers, railroad men, clerks, salesmen, timekeepers, and in fact almost every group of industry and office work was represented. Explicit instructions were given to the escorts and it was made clear that upon their success depended the possibility of obtaining additional employment for escort duty. To their credit it should be said that they were almost universally successful, with the result that no serious trouble developed on any train and no serious accident occurred while this vast army of men was travelling to the north. As a matter of fact, the only accident of any kind occurred when one of the workers was unfortunate enough to fall out of an upper berth while asleep and sprain his ankle.

The movement of men necessitated arrangements for feeding them and supplying them with coffee en route, and box lunches were purchased and placed on the trains at the starting point of each trip. Coffee was obtained by arrangements made in advance at the divisional points in Northern Ontario, and the workers expressed themselves on a great many occasions as being highly pleased with the interest shown in them by the representatives of the Government.

On their arrival at the railway station nearest the camp, they were met by guides who conducted them to the camps which are, in most instances, located within a short distance of the railway line. Officials of the Canadian Pacific Railway, Canadian National Railway and the Algoma Central co-operated with the Employment Service to the fullest possible extent in providing the tourist cars in which the men were carried and in making the necessary arrangements for holding trains for connecting parties as occasion arose. In several cases both railway lines obliged us by operating special trains when the regular service did not meet our requirements.

Numerous unsolicited letters which have been received from the camps, together with the personal observations of the General Superintendent and others, indicate that the vast majority of the men selected for this work appreciated the opportunity provided and have no complaints to offer with regard to their working or living conditions. We, in the Employment Service, are glad to have had a part in carrying the project into effect. It might be pointed out that the entire staff of the Employment Service throughout the province clearly indicated the value of training and experience in dealing with a problem of this extent, and co-operated whole-heartedly in putting it into execution, regardless of the amount of overtime work involved.

As a measure of relief work, the Department of Highways undertook the construction of approximately 60 miles of new highway, extending through the counties of Hastings, Lennox and Addington, Frontenac and Lanark. This section is a part of No. 7 Highway, and connects the existing portions at Actinolite and Bathurst Station, being more familiarly known as the Perth–Madoc Road.

The Employment Service was requested by the Department of Highways to take complete control of the placement of all labour on this project and for this purpose a temporary employment office was opened at Arden in November, 1931. This assignment was somewhat different from anything previously attempted by the Employment Service, and the fact that the undertaking was our first real co-operation with the Department of Highways gave it a certain degree of importance. The construction work was divided into eight units of varying distances and, as direct contact had to be maintained continuously with six different contractors, who had headquarters at various centres along the line, it soon became apparent that one office and representative at Arden could not hope to successfully cope with the situation. Branch offices were, therefore, opened and additional representatives appointed to take over their duties at Kaladar and Sharbot Lake, which gave us very close and direct contact along the entire line.

The Ontario Government Unemployment Relief Committee assigned to various municipalities quotas to be drawn from as the work progressed and accommodation was available, along similar lines to those used in Trans-Canada shipments, and local municipalities through which the road extended were given generous consideration in the matter of the local unemployed. The work entailed a gradual absorption of those workers, and it was not until toward the end of February that the peak of employment of well over 2,000 men was reached. Soon after the peak a gradual decrease occurred as certain portions of the work reached completion.

One feature militating against the complete success of the undertaking was the readiness of a few municipalities to send men to these camps who were unfitted for the arduous labour, with a consequent weeding out of the weaklings. It was found necessary to raise the age limit of 19 years so that men of more mature years could be recruited. However, the contractors were for the most part fair in giving every man an opportunity to show his willingness to do a fair day's work, and extreme measures were taken only when necessary.

The success attained by the Employment Service in handling this assignment can be gauged by the fact that when, later in the year, the Department of Highways let another contract along somewhat similar lines, they lost no time in turning their labour problem over to the Service.

During the concluding month of the fiscal year, the Ontario Government Offices of the Employment Service of Canada were requested by the Department of National Defence to co-operate in the selection and transfer of men to thirteen airport clearing projects in Ontario. With the exception of a few placements at Rockliffe and Trenton Airports this movement was not under way at the close of the fiscal year.

In the fall of 1932, a survey and a report was made under the auspices of the Unemployment Research Committee of Ontario. The report, entitled "Unemployment and Relief in Ontario, 1929–1932," is the first of its kind issued in this province, and contains several interesting references to the Ontario Government Offices of the Employment Service of Canada, examples of which are given below:

> "The actual transference of workers from the cities to the northern camps was put in charge of the Employment Service of Canada, and the Dominion and provincial governments assumed all transportation expenses. Men sought eagerly to be chosen for the various drafts, and when those from Southern Ontario set out on their long journey, in special cars or trains, crowds of friends and wellwishers thronged to the stations to see them off and reenacted scenes reminiscent of troops leaving for war service." . . . .
>
> "The recruiting, transfer and placement of workers for the road camps was a very substantial undertaking, in which the municipal authorities and the Employment Service of Canada co-operated effectively. From October, 1931, to April of this year, the Employment Service placed about 14,000 men in camp jobs, and in most instances made arrangements for them to travel hundreds of miles. Officials of the Service claim that so large a transfer of workers was never before arranged by a public employment office system in the United States or Canada." . . . .
>
> "The distribution of relief employment among the many applicants for it and the allocation of men to work was a difficult problem. Nowhere was there enough work provided for all applicants, so that arrangements had to be made to spread around the available jobs in some sort of systematic fashion. Clearly this called for a specialized employment service, and, as it was pointed out in the preceding chapter, in the larger communities the problem was generally met by delegating it to the local branch of the Employment Service of Canada or by setting up a new civic office. Of the larger municipalities for which information on this point is available, eight used the Employment Service of Canada, seven established their own employment offices, and two worked through their direct relief offices." . . .
>
> "As a general rule it may be said that the employment offices endeavoured to distribute the work equally among the men of a given class (married or single), without much reference to the fact that the needs of some members of the class might be greater than those of others. Thus the fact of unemployment, rather than the fact of destitution, was the dominant factor in deciding whether a man should have an opportunity of relief work or not."
>
> "Since the task of distributing work was performed by the Employment Service of Canada in a number of cities, the question may be raised as to whether it was necessary for any municipality which had an Employment Service branch to establish its own civic office. The major objection raised against use of the Employment Service was that its records were not designed to distinguish between eligible and ineligible applicants for relief employment and that such work lay outside of its ordinary function. Moreover, it was found in some cities that the local branch was lacking both in staff and in office space sufficiently large to deal with the great numbers of men seeking relief work. Hence it has been argued that a civic office, designed to perform a specialized function essentially different from that of the Employment Service, was quite necessary.

> "On the other hand, a number of cities which were served by the government offices did not find the objections listed above to be serious. In most of the cities visited which had used the Employment Service, municipal officials expressed great satisfaction with the way in which the Service had performed a difficult task. It was pointed out that a great many of the men who sought relief work were already registered with the government office for employment in their ordinary trades, and that when the Service handled the engagement of relief workers, registration at a second office, and the maintenance of a set of duplicate card records, was unnecessary. It was also stated, particularly in smaller cities, that Service officials were personally acquainted with a large number of the unemployed, and that this enabled them to classify the men as eligible or ineligible without the time and trouble and expense of special investigation. A further advantage was that use of the government facilities involved no administrative expenditure by the municipality."

The newspapers of the province continued their generous and whole-hearted support of the Ontario Offices of the Employment Service throughout the year. This attitude was taken unanimously throughout the province and contributed in large measure to the maintenance of cordial relationship between the Service, the employers and the applicants. In addition, the Toronto weekly paper published two articles dealing with the work of the Service, both of a very complimentary nature.

Between September 20 and 24, the Twentieth Annual Convention of the International Association of Public Employment Services of the United States and Canada was held in Washington. Ontario was represented by the General Superintendent, who presented an illustrated talk on "Relief Work as a Partial Solution of the Unemployment Problem."

On account of the necessity of conserving the appropriation for the work of the Employment Service in Ontario, the annual convention of the employment office superintendents was not held in Toronto as usual.

Some of the offices of the Employment Service have found it necessary to open as early as seven o'clock in the morning, and during the summer season to remain open until six o'clock in the evening, in many instances the staff working more than the stipulated number of hours when it was necessary to meet local conditions. In addition, many of the superintendents have been appointed to membership on municipal unemployment relief work committees and the meetings of committees have taken a great deal of their time outside office hours. The extra work has been undertaken cheerfully, however, superintendents and other members of the staff realizing the emergency nature of the work and the necessity for special efforts on their part to render the greatest amount of help to the community which it is their aim to serve.

Private Employment Agencies

The Department of Labour is charged with the administration of *The Employment Agencies Act*, which is intended to control the operation of private agencies by licensing and supervision.

There were fifteen private employment agencies operating under license in the province of Ontario last year, but this number was reduced on July 1st, when two of the existing licensees failed to make application for renewal. Three of these agencies are conducted exclusively as nurses' registries in Toronto. Of the balance, two are operated in Ottawa, three in Toronto, two in North Bay, and one each in Sudbury, Fort William, Blind River, Cochrane and Kapuskasing, all conducting a general business for working men and women.

It is apparent that none of these agencies have renewed their license on the basis of business done during the past year, but rather that they have expectations of better times coming soon. Bush work and extra gangs have in the past furnished the greater source of placements. With lumbering operations at a practical standstill, and only a minimum of railroad maintenance being carried on, employment agencies are hard pressed to show satisfactory results.

All licensed agencies have been inspected during the year, and many investigations conducted into apparent infractions of the Act. Convictions were recorded against three individuals for operating employment agencies without a license, as follows:

W. S. MacPherson, South Porcupine.—This man was arrested in Toronto on information laid by the Chief of Police of South Porcupine. He offered a plea of guilty and was fined $500 and costs or the alternative of twelve months' imprisonment.

John Cuckovitch, East Windsor.—He was charged with accepting money for jobs in the General Motors plant at Walkerville, collecting as high as $80 for a job. After many adjournments for various reasons, Cuckovitch was found guilty and sentenced to a fine of $250 and costs with the alternative of twelve months in jail. The fine was paid but appeal lodged.

Giglo Buncick, Schumacher.—Buncick was charged with violations of *The Employment Agencies Act*, found guilty and sentenced to pay a fine of $500 and costs or serve twelve months in jail.

In addition to these convictions there were many rather suspicious cases of attempted bribery and acceptance of fees for jobs, but due to the lack of direct evidence these cases were dropped. Many rooming-houses operated by people of Finnish origin had been making a practice of assisting domestics of their race in securing employment, some of them for gain, and others on a purely voluntary basis.

A survey of all employment work in the city of Toronto was made, and included the voluntary activities of the city of Toronto Central Bureau; Young Women's Christian Association; Home Nursing Bureau; Shaw Schools; Gregg College; United Typewriter Company; Citizens' Service Association, and Technical Service Council. In all, forty-eight individuals or associations carrying on employment work were visited and reported upon. With the exception of the six agencies operating under license, no control is exercised by the Department of Labour and no returns furnished.

In summarizing his very complete investigation into conditions throughout the province, Mr. W. C. Ferris makes the following recommendations:

First.—The necessity or desirability of issuing licenses to fee-charging agencies:

While it is evident that the Ontario *Employment Agencies Act* does not, in its present form, prohibit the operation of this type of agency under license, nor provide for the licensing of agencies which are operating for the benefit of a special class of worker, there would appear to be sound reasoning in the argument that all agencies, whether fee-charging, voluntary or those operating for special classes, should come under the direct control of the Department of Labour.

It is common knowledge that commercial agencies which charge fees do not always handle their business in an open and above-board manner. Persons with little skill and no training are conducting this business in which good judgment, integrity and honest dealings are of such paramount importance to the man or woman searching for a job.

In communities already served by a branch of the Employment Service, there can be no particular necessity, other than that of personal gain or the exploitation of the unemployed worker, in the granting of licenses to fee-charging agencies. The Employment Service of Canada is charged by the federal and provincial Governments with the full responsibility of serving all requirements in this field of public service.

There are certain phases of this work which would be difficult to assume with the present facilities and personnel, but if an increased appropriation were provided, a healthy growth of the public service could be maintained, and all matters pertaining to employment and the finding of jobs made the concern and duty of this important organization. The present state of efficiency has been built up through years of responsibility and the best thought and energies devoted to careful legislation.

With this line of reasoning as a basis, the question of the abolition or absorption of all fee-charging agencies could well be given the most careful and full consideration.

Second:—To what extent should voluntary employment agencies be governed, and how much control should be exercised over such agencies?

There can be no doubt but that certain agencies which are being operated in conjunction with the welfare work of certain organizations are performing an additional service to a point. As their functions are not in any sense of the word profit-gaining, but are conducted on a purely voluntary basis with the interests of the unemployed at heart, they should be allowed to continue their activities.

However, there seems no reason why these agencies could not furnish to the Government a record of the business done and their actual accomplishments in employment work, and to this end a system of control might be instituted by legislation, to bring these agencies under direct governmental supervision.

Third.—On what basis should provision be made for the placing of foreign-born domestics?

This is a question which is causing considerable concern to officials who are charged with the responsibility of eliminating the unlicensed persons who make a practice of preying upon the uninformed by charging fees for the finding of positions.

As is well known, this practice was carried on by many Finnish rooming-house owners, who were quite active in soliciting employment, principally through advertisements in the daily papers, and in return for this service collected fees from the individuals so assisted.

In all fairness, however, it must be admitted that this condition is not so prevalent now as it was during the period preceding the ban on immigration, but there is a situation apparent which requires adjustment.

It is estimated that there are from three thousand to four thousand Finnish-born domestics in the city of Toronto, and the inability of some of them to speak or understand the English language places them under a distinct handicap when applying for positions. They must rely on the services of an interpreter to aid them. As at present constituted, the personnel of the Women's Department of the Employment Service does not include one conversant with the Finnish or other foreign languages. The wily rooming-house owners are well aware of this condition, and utilize the knowledge to their own personal gain and to the disadvantage of the worker.

To combat this evil, and to give to these women and girls an understanding service, it would appear that one of two courses is open, and should be carried out without delay:

(a) Attach to the staff of the Women's Department of the Employment Service a capable women, preferably of Finnish origin, who is versed in that and other European languages.

(b) Issue a license to a person of that particular race to operate a fee-charging agency under the Employment Agencies Act.

Fourth.—The continuance of agencies already licensed to do employment work:

In the case of communities in which no branch of the Employment Service is located, it may be found advisable to allow the agencies already licensed to continue their operations, but as conditions arise, which would enable that community to receive the benefits of the Employment Service, they should be abolished. Meanwhile, during their term of existence, more stringent regulations should be applied.

The long established custom under which a person has to pay for the privilege of performing honest toil for value received does not belong to the present day and age. Education and up-to-date methods have changed our standards. We have gone forward materially in respect to employment work during the past decade, and no doubt we will continue to advance until we finally relegate this ancient custom to the archives of history.

The activities of the private agencies reflected general employment conditions and the thirteen licensed agencies reported a total of only 3,336 men and women placed in positions. More than one-third of this number was placed by a single agency in Toronto, leaving an average of 172 placements for each of the other twelve agencies during the twelve months.

Boiler Inspection Branch

Chief Inspector—D. M. Medcalf.

Inspectors: E. T. Urquhart, N. S. Smith, J. M. Kelly, J. N. Briggs,
W. H. Barrett, J. A. Mackenzie.

This is the twentieth report on the operations of *The Steam Boiler Act*, the purpose of which is to protect life and property by requiring that boilers and high pressure vessels be constructed and repaired in accordance with inter-provincial regulations adopted by conference between representatives of the provincial Governments.

Boilers and pressure vessels must be constructed under supervision of government inspectors appointed under the Act and the plans and specifications must first be approved by the Chief Inspector and surveyor of designs. No boiler may be sold or exchanged without being inspected and all major repairs must be approved and inspected before the vessel is put back into service. Steam pipe layouts for new installations and additions to old plants must also be approved.

Under the requirements of *The Steam Boiler Act* we have no jurisdiction over the annual inspection of boilers, unfired pressure vessels, or high pressure steam pipe lines. Nevertheless we render this service when requested to do so by the owner or user of a plant, to comply with the requirements of *The Factory, Shop and Office Building Act*, which has jurisdiction over the annual inspection.

During the past year we have rendered this service by inspecting 644 boilers and 135 pressure vessels, making a total of 779 annual inspections. A report stating the condition of the boiler, as found by our inspector, is forwarded to the owner or user, together with a certificate on which is stated the maximum pressure that may be carried.

In a large number of boilers, where we rendered this inspection service, we found defective settings, water columns improperly fitted, safety valves not large enough to relieve excessive pressure, fusible plugs not fitted and some, where the fusible plugs had been replaced with solid plugs, which rendered them useless. In one particular case the blow-off opening in the rear course of an H.R.T. boiler had been patched and another opening made in the front course directly over the fire and fitted with a blow-off pipe. We also found a number of boilers in such a condition that the expense involved in making the necessary repairs would not have been warranted, and the boilers were replaced with new ones.

A number of explosions have occurred during the past year, and I am pleased to report that we had nothing to do with the inspection of these boilers and pressure vessels.

During the month of November a steel jacketed kettle exploded in the Proctor and Gamble Company's plant at Hamilton, doing considerable damage, but fortunately no person was injured. The construction of this kettle was found to be not in accordance with our requirements, but was replaced with one suitable for the pressure that will be exerted on it.

On December 22, an explosion of what was considered a steam boiler occurred fifteen miles south of Delhi, resulting in the death of the operator, Mr. L. W. Buffalo. One week previous to this explosion there was another one of a similarly constructed vessel owned and operated by Mr. Buffalo, but the only damage done was the tearing away in its flight of one side of the stripping building located 100 feet away.

On January 1, a hot water storage tank exploded in the Russian Turkish Baths, Centre Street, Toronto, resulting in the death from scalding of Morris Sherer. Although this tank had failed about six weeks previously and certain repairs had been made, we had not been notified of these repairs. The tank that failed was replaced with one of different construction and fitted with a relief valve that will adequately take care of any excess pressure.

On April 7, a steam cooker 60 inches in diameter by 8 feet long, exploded in the Heckler H.O. plant at Ayr, resulting in the instant death of Alfred G. Brohman, the night operator.

On May 9, a centrifugal drying machine exploded in a plant at 118 Esplanade East, resulting in the death of Miller Mitchell.

On October 4, at the request of the Police Department, we made an examination of the steam plant on the premises occupied by the Turkish Baths, 128 Peter Street, Toronto, where the unfortunate death of Charles Johnson occurred from scalding by steam. The boiler was operated at 65 pounds pressure. The steam main is 2 inches in diameter with ½ in. branches leading to each bathroom, with open ends extending 2 ft. above the floor line and located under the benches where the occupants sit. The admission of steam was controlled by a ½ in. globe valve. When one considers that steam at 65 pounds pressure is 310 degrees Fahrenheit, and no means exist of controlling same other than by hand, the danger of such a system is apparent.

On October 6, a valve burst on a 200 pound steam line in the C.N.R. plant, Toronto, resulting in the death of three men.

On October 16, a tank 24 in. by 5 ft. 10 in., made up in one course of 3/16 in. plate, the longitudinal seam lap and welded inside and outside, with dished heads ¼ in. and 5/16 in. welded to shell, in which a steam coil was installed for heating water, exploded in the Kodak Company's plant at Mount Dennis. Not having examined the installation of the tank and the methods provided to control the steam pressure or temperature of water, we cannot say definitely the cause of the failure. We did, however, find that in testing the ¾ in. relief valve it functioned at 110 pounds pressure.

On October 24, James Callaghan and James Scott were instantly killed when a boiler exploded on the W. J. Hall farm, four miles east of Lindsay. Upon examination of the destroyed boiler it was quite evident that the failure resulted from grooving along the longitudinal seam. On this same date a boiler on a locomotive exploded near Kenora, resulting in the death of three men.

CAUSTIC EMBRITTLEMENT

One glaring case of what is termed "caustic embrittlement" came to our attention when one drum of a water tube boiler developed a leakage around the rivets. Upon careful examination we found that the rivet heads could be knocked off with an ordinary hand hammer, and that a crack had developed in the shell between the rivet holes, extending 21 inches where the shell is attached to the saddle. The damaged drum was replaced with a new one.

FUSION WELDING

Section 366 of the Interprovincial Regulations provides for the acceptance of pressure vessels fabricated by the fusion welding process. We, however, found it desirable and necessary to accept this class of work beyond the limits specifically provided for in the Regulations.

Fusion welding is the process of joining metals by the application of concentrated heat of high temperature to the edges of pieces to be joined. The edges of metal at the joint are brought to a molten state by the high temperature of an electric arc or the flame of a gas torch, and the additional metal required is provided in the form of a rod or wire, which is likewise fused into the joint or base metal.

We were very reluctant to accept fusion welding beyond the limits provided for in the Regulations, but after careful consideration a meeting was held in these offices on March 1, 1932, which was attended by nineteen manufacturers in Ontario, one from Quebec, and the Honorary Secretary of the American Society of Mechanical Engineers. Every representative was privileged to express his views on the acceptance of the A.S.M.E. Code rules for the welding of unfired pressure vessels.

The expressions of opinion were gratifying and it was decided to take the advanced step by carrying out the A.S.M.E. requirements in Classes 2 and 3 for unfired pressure vessels for Ontario only. A number of manufacturers have complied with these requirements, and they will be held responsible for the quality of welding done by their welders who have passed successfully the prescribed tests.

A large number of unfired pressure vessels have been fabricated by the fusion welding process from approved designs, thoroughly inspected during the process of manufacture and tested after completion. The results obtained during the operation of same have met with the entire satisfaction of all concerned.

It is not our intention to let down the barriers against unsafe construction, but the art and technique of fusion welding have advanced so rapidly, it is reasonable to assume that during the next decade riveted construction will be replaced by fusion welding by manufacturers who are properly equipped to handle this class of work, not only on unfired pressure vessels, but on high pressure boilers.

HOT WATER BOILERS AND TANKS

It is now common practice to install on hot water boilers what is known as a "hot water heat control system." This apparatus is placed on the water supply line and usually consists of a stop and check valve, strainer, regulating valve, drain and a relief valve. With this apparatus installed the ordinary expansion tank is eliminated, the temperature of water is raised and the circulation increased, resulting in more efficient heating.

In a large number of these installations serious trouble has developed from cracked sections, owing to the pressure exerted being too great for the cast iron sections to withstand. After investigating, to ascertain the cause of section failures, we found that some of the valves had failed to function owing to the accumulation of dirt and other foreign matter plugging and rendering them inoperative. With a view to overcoming this difficulty and making doubly sure that hot water boilers will be amply protected we have taken steps to enforce rigidly Sections 324 and 340 of the Regulations, where they provide for the installation of relief valves, independent of any other fitting connected outside of the boiler.

On May 4, we circularized the manufacturers of kitchen range boilers, hydro-pneumatic tanks, and hot water storage tanks that designs showing the construction of these types of vessels must be submitted for approval. Our request was complied with, and we found we could accept their standard designs for the pressure desired.

It was suggested we should issue a transfer seal to the manufacturers, to be placed on every range boiler, hydro-pneumatic tank and hot water storage tank that would be accepted without shop inspection. We gladly complied with this suggestion and purchased 110,000 seals on which is printed "Approved, Boiler Inspection Branch, Department of Labour," together with the Ontario Coat of Arms. These seals are sold to the manufacturer at cost and one is placed on every approved tank before leaving the place of manufacture. This provides a protection to the manufacturer, dealer and purchaser, because when this seal is applied it is an assurance that the tank has been suitably constructed to meet with the requirements of the Regulations, and will prevent the sale of tanks of inferior construction, which have for some time been marketed in Ontario by manufacturers located outside the province.

Owing to the number of failures in kitchen range boilers, hot water storage tanks and hydro-pneumatic tanks, we found it expedient to enforce more rigidly the requirements clearly set forth in the Regulations by demanding the installation of water relief valves. The engineering departments of the different cities and towns will be informed of these requirements, together with a request that they co-operate with us in ascertaining that all new installations are equipped with relief valves.

INVESTIGATIONS OF EXPLOSIONS OF BOILERS AND PRESSURE VESSELS

January 22	Investigation of explosion of tank at Russian-Turkish Baths, Centre Avenue, Toronto.
February 10	Investigation of explosion of steam jacketed kettle at Proctor & Gamble Company, Hamilton.
February 24	Investigation of boiler accident at Ontario Refining Company, Copper Cliff.
April 8	Investigation of explosion of cooker at H. O. Cereal Company, Ayr.
May 10	Investigation of explosion of centrifugal dryer at 118 Esplanade, Toronto.
October 5	Investigation regarding accident in steam baths at 128 Peter Street, Toronto.
October 7	Investigation of explosion of steam pipe line at Canadian National Railway Yard, Toronto.
October 18	Investigation of ruptured tank from Kodak Company, Mount Dennis.
October 25	Investigation of explosion of boiler at Lindsay.

Various inspections of welding and testing of coupons at manufacturer's plants and at testing laboratories were also made by inspectors of the Boiler Inspection Branch.

CERTIFICATES ISSUED

Class "A" certificates (new pressure vessels)	305
Class "B" certificates (used pressure vessels)	596
Class "C" certificates (heating boilers, low pressure, accepted by affidavit of shop foreman)	227
Class "D" certificates (new pressure vessels, accepted by affidavit)	611
Class "E" certificates (new boilers under 3 h.p. accepted by affidavit)	91
Duplicate certificates	22

The total amount of moneys transmitted to the Treasurer of Ontario for the fiscal year ending 31st October, 1932, $12,623.66.

REVENUE STATEMENT

Dr.		Cr.	
Fees for designs surveyed	$2,357 25	Amount of moneys transmitted to Treasury Department	$12,623.66

Board of Examiners of Operating Engineers

Chairman: J. M. Brown.
Members: W. J. Scott, S. G. Rose.
Inspectors: E. J. Everett, W. J. Jordan.

In submitting the annual statement of the work of the Board of Examiners during the year 1932, the following particulars are presented by way of a general review.

Compared with the previous year, there is a slight decrease in net revenue, amounting to $507.86. It should be noted, however, that the sale of text-books brought in the sum of $1,385.35, and if this amount is deducted, there is a decrease in ordinary revenue amounting to $1,893.21.

There is also a decrease, compared with the previous year, in the number of certificates issued. Including renewals, this decrease totals 695 of all classes. In the number of certificates issued by examination and including those candidates who failed to pass, there is a decrease of 14 per cent. in stationary plant operation examinations, and 38 per cent. in construction plant operation examinations. The greater decrease in the latter examinations is justified by the present condition of the construction and building trades.

Of the 1,717 examinations held during the year, 765 candidates were examined at the Head Office in Toronto, while 952 candidates were examined at outside centres.

Early in the year the Act was amended, bringing it into agreement with modern power plant practice.

The name of the Act has been changed to incorporate all its activities.

The introduction of internal combustion engines on hoists called for protective legislative measures. These are now embodied in *The Operating Engineers Act* making it compulsory to employ qualified engineers for this class of labour.

In order to facilitate the making of regulations respecting the three different classes of work that came under the original heading of hoisting plant, the Act now sets down three divisions, namely, hoisting, traction and portable.

An unwritten law with present builders of boilers lays down the rule that 15 lbs. steam pressure is the dividing line between high and low pressure plants. In accordance with this practice the Act has been changed so that a boiler, the safety valve of which is set to relieve the steam pressure at 15 lbs. or under, is designated low pressure and is exempted, unless it is of 200 horse-power or over In the old Act, all boilers irrespective of the horse-power, the safety valves of which were set at a pressure of 10 lbs. or less, were considered as low pressure plants and exempted.

An additional grade of certificate for firemen is now in force. This certificate takes care of night watchmen who require a knowledge of boilers, but not sufficient for an operating engineer's certificate of the fourth grade.

Further changes in the Act involve the separation of refrigerating and air compressor plants and placing them into two classifications. It is considered that the same engineering qualifications are not necessary for both plants.

Another change has clarified the meaning of the Act with respect to workmen who are exempted.

In order to conform with the above changes in the Act, changes in the Regulations were necessary, and these have been duly effected.

There is a steady improvement each year in the type of engineers appearing for examination. The grading of the certificates has undoubtedly something to do with this. On the other hand, the high standard of examination maintained by the board is a factor which should be taken into account in the above connection.

With regard to the examinations, both written and oral are given. The aim of the examinations is to "draw out" the candidate and make him think. The questions asked are so arranged that they form a guide to the engineer as to the knowledge required for his position in the plant.

The work of the examiner goes beyond the examining of candidates. His advice is frequently sought both by employers and employees with respect to efficient methods of power plant operation and the uses of the latest equipment.

With the object of encouraging the Ontario power plant operators to study engineering subjects, the Board of Examiners began last year the work of compiling suitable text books. Since then three text books have been completed and the demand for these has been such as to support the action of the Board in its educational function.

There were a few violations of the Act during the year, but these were readily adjusted when brought to the attention of the employers.

Subjoined is the usual summary of the board's transactions for the fiscal year.

Factory Inspection Branch

Chief Inspector: James T. Burke

The forty-sixth Annual Report of the Factory Inspection Branch for the fiscal year 1931–32 discloses the fact that, while industrial conditions have been such as to once again show a decline in the number of factories operating, and many staffs curtailed to the minimum, the visits of our inspectors and the work of the branch have increased. This is probably due to the fact that with smaller staffs and shorter working hours the managements are inclined to postpone repairs and safeguarding for the time being, resulting in conditions which keep the factory inspectors on the *qui vive* to remedy before serious accidents result. Perhaps it is this determination on the part of our inspectors to maintain safe conditions for the employees that is responsible for the reduction in the ratio of accidents in comparison with former years, which is an unusual situation, in that ordinarily the safety organization in a plant might be expected to be the first to break down under the conditions which have existed during the past two years. Acting under instructions from the Chief Factory Inspector, all inspectors made special enquiries in their rounds during the year as to the industrial plants coming under their jurisdiction which maintain special safety organizations. The inspectors' reports at the end of the fiscal year indicated fifty-six such firms in which safety committees were functioning satisfactorily.

Some of our inspectors, in summing up their year's activities and conditions as they found them during their travels, are able to report signs of a return to normalcy in certain lines of endeavour, as the year draws to a close. Iron and steel, pulp and paper, building materials, lumber and woodworking, in fact most of those industries which would ordinarily be active during an expansion of trade, with new office buildings, factories and residences being erected everywhere and machinery placed therein, are still at a very low level, while those manufactories which supply the necessities for human consumption and use, such as food-stuffs, cloths, wools and clothing, are maintaining a fair turnover, with prices much reduced, commensurate with the incomes of the buying public. It is probable that a proportion of the increases noticed is due to demands in seasonal lines, and might consequently be of short duration, but the fact remains that even those factories operating on seasonal lines are more active than during the past few years. The purchasing power of the dollar is so enhanced at this time, that buying is quite active among those persons employed steadily, even though wages are materially reduced.

An increased number of industries have had to resort to overtime permits, owing to emergencies, exigencies of trade, etc., and in addition, thirty-one double-shift permits were issued under new legislation during the past year. While it is probable that the prevailing policy of permitting merchandizing stocks to become depleted, making necessary rush orders on the manufacturers, is responsible for most of these applications, yet many lines of industry are enjoying increased business beyond anything they have had before, and it is in those lines mostly that the double-shift permits have been issued, resulting in more employment opportunities for women.

Amendments to *The Factory, Shop and Office Building Act* during the 1932 Session of the Ontario Legislature were practically all of a social nature, and have found favour in most circles, particularly among those for whose benefit they were framed to alleviate conditions not in keeping with the trend of the times. Section 33, permitting the employment of a double shift for females and youths in factories, appears to have filled a need, and in certain industries has been eagerly taken advantage of. The adoption of this legislation makes unnecessary, in many cases, the overtime permits under section 32 frequently resorted to during exigencies of trade. This section permits the employment of females and youths on two shifts between six o'clock a.m., and eleven o'clock p.m., neither shift to exceed eight hours, and allows for a meal period of one hour on each shift. This legislation enables the factory management to keep the machines running longer hours during peak periods, with shorter hours of labour for females and youths, making for the employment of more persons.

Another change in the Act relates to the regulations of hours of employment for females and youths in shops and restaurants. Formerly such persons could not legally be employed in a shop after six o'clock p.m., except on Saturday evenings, nights before a statutory holiday, and during the Christmas season. This limitation seemed to work a hardship on the shopkeepers in the suburban shopping districts, and in certain classes of business, consequently the closing hour has been extended until eleven o'clock p.m., the hours of labour, however, remaining the same as formerly, i.e., not to exceed ten hours in any one day nor sixty hours in any one week. Restaurants also are now specifically mentioned in this Act, which settles any arguments that might have arisen when they were included in the general classification under "shop." The limitations as to hours of work for females and youths in restaurants are identical with those relating to shops.

Social legislation such as this is in keeping with the times, but it is frequently necessary to educate the employers, employees and the general public to the advantages derived by all concerned from such regulations before the administration can be entirely successful. The habits of long custom are difficult to change, and the lack of interest or co-operation by the buying public requires that the inspectors use much tact, patience and perseverance before these enactments can succeed and the benefits to be desired accrue.

Section 57 in the new Act provides for regulations for the protection of persons engaged in any industrial process involving the use or manufacture of benzol or any other poison. Following a great deal of work by this branch and the Industrial Hygiene Division of the Department of Health, tentative regulations were drawn up and submitted to a meeting of interested parties from representative firms manufacturing paints, rubber goods, leathers, etc. This meeting was held at the Parliament Buildings on July 5, 1932, and the large number attending, together with the discussions which took place, emphasized the interest these industrial firms felt in the matter. Certain changes in the original draft suggested at the meeting were incorporated in the regulations which were finally adopted by Order-in-Council under date of August 23, 1932. These were put into printed form and distributed to the firms represented at the meeting, and are available to those interested. Several thousand copies of the regulations have been distributed by the Department of Health to medical practitioners throughout Ontario who are requested to report any case of benzol or other industrial poisoning which comes to their attention.

The regulations prescribe the conditions under which benzol and other poisons may be manufactured or used, and call for the labelling of the containers in which it is distributed, also for the posting of printed forms, approved by the Department of Health, setting forth the dangers of its use, and the precautions to be taken. Accurate information as to the percentages of harmful ingredients contained in their products must be rendered to the Chief Factory Inspector or the Industrial Hygiene Division by the manufacturers or distributors, when required. Periodical medical examinations by qualified doctors are required of all employees engaged in such industrial processes, and the fees for these examinations are laid down, and as mentioned above, all doctors coming across a case of industrial poisoning, whether in general practice or following the specified examination, are required to report the matter at once to this branch or the Industrial Hygiene Division.

Chemical processes form an increasingly important place in modern manufacturing and many serious hazards are present where these chemicals are used or manufactured. The manufacturers of chemicals would be expected to know the potential dangers of their products due to harmful ingredients, and protect their employees accordingly, but these products are ordinarily distributed under a trade name which does not necessarily divulge their dangerous contents. As no precautions were advised by the manufacturer, or thought necessary by the user, many hazardous conditions prevailed throughout those industries using a solvent such as benzol in their manufacture or processing with rubber goods, rubber cement, paints, varnishes, certain leathers, stereotypers and other similar occupations or industries. The adoption of these regulations, therefore, paves the way for a more complete control of the use and manufacture of these poisons, and the early discovery of their effects, through examination, will ensure those persons, unfortunate enough to have become affected, immediate treatment in time to prevent the insidious workings of the poisons.

The following is the text of the regulations which were adopted by Order-in-Council under date of August 23, 1932:

Regulations under Section 57, subsection 1 (a), (b), (c), (d), (e), (f), in Factory, Shop and Office Building Act.

1.—Where lead or its compounds or benzol are prepared for use or used in any industrial process, special precautions must be taken.

2.—Manufacturers and distributors of substances containing benzol as an ingredient for use in any industrial process must label in easily legible type with distinct visibility the packages or containers of this substance to show that benzol is present.

3.—Manufacturers and distributors of substances containing lead or its compounds as ingredients for use in any industrial process must label in easily legible type with distinct visibility the packages or containers of these substances to show that lead or its compounds are present.

> Exception is made where lead compounds are used only as dryers in the preparation of paint products and where paint products are prepared for use by brush or by dipping process only.

4.—(a) Employers and others making importations of substances containing benzol or lead or its compounds for resale or for use in any industrial process must comply with Section 57 of the Act and with these regulations.

(b) Manufacturers, distributors and employers using substances dangerous to health, when required by the Chief Inspector of Factories on advice of the Director of the Division of Industrial Hygiene, must post in a conspicuous place printed forms to be approved by the Department of Health setting forth these dangers and indicating the precautions necessary for the protection of their employees.

(c) Manufacturers, distributors and others offering for use in any industrial process substances which may contain ingredients harmful to health must provide accurate information regarding the percentage of these ingredients when requested by the Chief Inspector of Factories or by the Director of the Division of Industrial Hygiene, Provincial Department of Health.

(d) The Chief Inspector of Factories on the advice of the Director of the Division of Industrial Hygiene, Provincial Department of Health, may require at specified intervals, by qualified physicians at the expense of employers, physical examinations of workmen employed at the time of inspection or within the previous six months, in any industrial process which is considered to be detrimental to health. The reports of these examinations shall be forwarded forthwith to the Director of the Division of Industrial Hygiene, Provincial Department of Health, and shall meet their requirements.

(e) The fees for these physical examinations, if conducted in groups of five or more from one factory shall not be in excess of $2 each for physical examination and report; $3 per film for X-ray examination and report; $2 each for blood count and report; $2 each for blood smear examination and report. Where less than five examinations are required by one factory at one time, these fees may be increased by not more than 50c each.

(f) All duly qualified physicians in the Province shall report forthwith to the Director of the Division of Industrial Hygiene, Provincial Department of Health, any case of specific industrial disease or of suspected specific industrial disease coming to their attention on report form to be supplied by the Department of Health.

It is required that female employees, working around machinery in a factory, wear their hair fastened close to their heads or confined in a cap or net. Despite the fact that our inspectors always stress this point with employers and management, and point out the dangers of loose flying hair, many painful accidents have resulted during the past. An inspector's report in front of me at the minute, reports the fact that a young woman working around machinery in a Tilbury factory was terribly injured when her hair was caught in a revolving shaft and a large portion of her scalp torn away. This type of accident continues to occur in spite of the admonitions of our inspectors, the publicity of the press and the definite instructions of the management of the factories.

The human element is one of the most difficult features to combat in accident prevention work. Positive mechanical guards are placed on a piece of hazardous machinery to render it safe for the operator, and when our inspector visits the plant he finds that the workman has removed the guard to make some adjustments to the machine, and has left the guard on the floor alongside. An accident might not occur as a result for weeks or months, but it is bound to occur if the guard is left off the machine. Plant management and discipline are to a large extent responsible for the occurrence of such accidents, for when guards or goggles are supplied and are not in their proper place, it is a direct challenge to the authority of the plant management.

Perhaps the most persistently recurring type of accident is due to falls or falling objects. Year after year these cause more accidents than any other single classification, and the large majority of them could be averted. Wet and slippery floors, objects lying in passageways, ladders inefficiently repaired, worn and broken treads on stairs, no handrails on stairs, these are the agencies responsible for most of the falls. Improperly stacked or piled goods or materials, wrenches left on overhead beams after a shaft repair job, or dislodging an object in a pile without first taking the necessary precautions make hospital cases of many men each year. From this list it is apparent that good housekeeping and safety consciousness would wipe out these classifications from the accident records, and 25 per cent. of the accidents with them. Because of their simplicity and the fact that possibly half a dozen such situations might be seen to exist in one plant and their hazard not realized or heeded by the foreman or superintendent, it is frequently difficult for our inspector to get immediate action until the occurrence of an accident forcibly brings to them this realization of the hazard.

The following statistical information is taken from our records and is of interest and value in graphically depicting the magnitude and scope of the work of this branch:

	Year 1931	Year 1932
Total inspections and revisits...............	21,939	23,148
1st inspections...........................	14,294	14,830
2nd inspections...........................	7,645	8,318

In addition to these are investigations of accidents and complaints, inspection of buildings on grounds during the Canadian National Exhibition and the Ottawa Exhibition, and at the homes of applicants when delivering contract clothing permits under Section 51.

There were also the usual special visits, office calls and conferences incidental to inspection.

Employees in above industries, mercantile establishments and office buildings numbered 270,102.

Year	Males over 16	Males 14–16	Females over 18	Females 14–18	Total	Children under 14 dismissed
1931	228,627	113	94,986	1,602	325,328	1
1932	183,108	8	86,900	86	270,102	14

Hours of Labour

	Males					Females				
Hours	45	50	54	58	60	45	50	54	58	60
Year 1932	100,748	30,981	15,418	1,878	14,213	52,386	16,010	5,766	844	3,308

Also 28,550 employees, male and female, working approximately 50 hours per week.

Orders issued relating to various requirements of the Act totalled 4,986 as compared with 5,035 in the year 1931.

Permits

Applications for permits, overtime and others, numbered 1,345 and were issued as follows:—

Year	Double Shift Permits Section 33	Overtime Section 32	Bakeshop Section 71	Fruit Camps Section 38	Sale of Bread manufactured out of Province Section 70	Contract Workers Section 51	Total
1931	..	897	697	22	6	409	2,031
1932	31	904	133	25	1	251	1,345

COMPLAINTS

One hundred and eighty-eight complaints were received during the year. Upon investigation 73 were upheld, 66 not upheld, 35 are pending investigation and 14 do not come within the jurisdiction of this branch. Some investigations cover more than one complaint. Subjects of complaints are:

Year	Heat	Elevators	Fire protection	Child labour	Lavatories	Sanitation	Boilers	Guards	Ventilation, dust, fumes, etc.	Overtime	Hours of labour	Manufacturing in basement	Mechanical exhaust	Sunday work in bakeshops	Miscellaneous.	Violation of Operating Engineers Act	Violation of Minimum Wage Act	Violation of Adolescent School Attendance Act	Not under our jurisdiction	Total
1931	10	2	6	1	11	2	7	4	12	1	37	1	2	1	6	6	5	2	4	120
1932	11	7	3	5	12	5	12	...	13	9	66	3	..	2	4	8	11	3	14	188

More complaints were received during the past year than for any previous year covered by these records, and excepting those received towards the close of the fiscal year, which will be included in next year's report, were investigated thoroughly by our inspectors. An unusually large number of complaints were received that child labour was being resorted to, but upon investigation it was disclosed that they referred in each case to adolescents, and the complaints were not upheld. Two of these adolescents were, however, found to be without the necessary certificates, and were sent home until same could be secured. Fourteen cases of child labour were found by our inspectors in the course of their visits during the past year, and these conditions were promptly remedied before the inspectors left the premises. Most of the complaints were adjusted satisfactorily without much difficulties, but in some cases it was necessary to make repeat visits.

VIOLATIONS

Violations of the Acts in the enforcement of which the inspectors have a responsibility were submitted as follows:

Of the Operating Engineers Act	13
Of the Adolescent School Attendance Act	4
Of the Minimum Wage Act	900
Of the Steam Boiler Act	1

PROSECUTIONS

Proceedings were taken against two firms, one under Section 59 and the other under Section 60 of *The Factory, Shop and Office Building Act.* Conviction was recorded in both cases.

ACCIDENTS

Two thousand five hundred and four accidents were reported for the year 1932, of which thirty were fatal, compared with 3,256 reported in 1931 with thirty-five fatalities:

Fatalities were due to:

Belts, pulleys and shafting	3
Benzol poisoning	1
Drowning	1
Electricity	3
Elevator	3
Emery wheel	1
Explosions	4
Falls	3
Falling substance	1
Infected wounds	1
Other machinery	2
Rolls	1
Saw	1
Scalds and burns	4
Suffocation	1
Total	30

EXPLOSIONS

Explosions reported during the past year caused the death of four employees and injuries to three others.

November 9, 1931—A hot water boiler explosion took place in a tanning factory.

November, 1931—A small copper vulcanizer exploded in a dentist's office, due to excess pressure.

December 8, 1931—Gas exploded when lighting furnace in an automobile factory.

December 22, 1931—Gas exploded in boiler room, due to closed damper. This explosion took place in an apartment building.

January 6, 1932—While making bottom tests in a grain elevator an explosion took place.

February 4, 1932—A hot water boiler exploded in an electric supply plant.

April 7, 1932—A wheat cooker exploded in a cereal plant.

May 9, 1932—While tinning a basket or drum of an extractor an explosion took place.

May 10, 1932—A blow torch exploded in a garage while workman was using same.

May 11, 1932—An explosion took place in an electric oven at an automobile plant.

May 19, 1932—An explosion took place in a milk plant, followed by fire.

August, 1932—A small vulcanizer exploded in a dentist's office, there being no gauge or blow-off.

DISTRICT INSPECTORS

The following is a list of the factory inspectors of the province, showing the district in which each is responsible for the proper observance of the provisions of *The Factory, Shop and Office Building Act:*

J. H. AINSBOROUGH, *66 Pacific Avenue, Toronto.*—Mr. Ainsborough's industrial district is the City of Toronto, including Lansdowne Avenue, Bloor Street, Dundas Highway, including Cooksville, C.P.R. and C.N.R. West, North and East, excluding Woodstock, Drumbo, Tavistock, Stratford, Millbank, Listowel, Gowanstown, Harriston, Palgrave and Greenriver, but includes East C.P.R. Lakeshore Railway and C.N.R., but excludes Bayside and Anson, but includes Prince Edward County; and for cheese factory inspection purposes includes the Southwest portion of Northumberland and Peterborough Counties South and West of the C.N.R. between Peterborough, Anson and Trenton.

R. ALBROUGH, *25 Grosvenor Avenue, Sault Ste. Marie.*—Mr. Albrough's district is west to Manitoba boundary line and East, including St. Joseph's, Cockburn, Manitoulin Islands, French River, North Bay to the Quebec boundary line.

H. BOURNE, *Parliament Buildings, Toronto.*—Mr. Bourne covers all districts in the Province of Ontario for the purpose of investigating foundries.

W. T. E. BRENNAGH, *59 Kensington Avenue South, Hamilton.*—Mr. Brennagh's district is G.T.R. main line West to London (exclusive) East to Niagara Falls, South and East of London and Port Stanley line, North C.P.R. and G.T.R. to Bucke and Tavistock exclusive of Milton, Branchton and Ingersoll North.

H. A. CLARK, *101A Roncesvalles Avenue, Toronto.*—Mr. Clark's district is the City of Toronto. both sides of Spadina Avenue, and Road, Caldow, Forest Hill Village, to City limits on the Northeast of Lansdowne Avenue, and Bloor Street intersection and South including Toronto Harbour, West, including Clappison Corners, Aldershot to Lake Ontario, but excludes South of the C.P.R. excepting Cooksville and Dundas Highway.

W. C. CROZIER, *381 Division Street, Kingston.*—Mr. Crozier's industrial district includes Brockville, County of Leeds, and North, excluding Perth, Smith's Falls, and Glen Tay, to Calabogie, Renfrew, Eganville, Barry's Bay and Madawaska, but includes Sharbot Lake, Wallace, Bancroft, Wilberforce, Mumford, Highland Grove, Baptiste, Coehill, and Peterborough and South including Campbellford, Anson, Belleville, Amherst and Wolfe Island, but includes Prince Edward County; but for cheese factory inspection includes the Counties of Northumberland, Peterborough, Hastings, Lennox, Addington, Frontenac, Leeds, Grenville and Dundas, except that portion of Northumberland and Peterborough Counties South and West of the C.N.R. between Peterborough, Anson and Trenton.

J. P. FERGUSON, *370 Blackthorn Avenue, Toronto.*—Mr. Ferguson's district is the City of Toronto, Yonge Street, East side to the Don River including Harbour and County of York, east side (excluding Scarborough Junction and Greenriver) to Lake Simcoe exclusive of Atherley and West including C.N.R. (Allandale Line) and Highway to Craigvale.

W. S. FORSTER, *336 McLeod Street, Ottawa.*—Mr. Forster's industrial district is East and South to Maitland, St. Lawrence River and Quebec boundary, North and West including the County of Grenville, Smith's Falls, Glen Tay, Calabogie, Airy, but excludes North Bay and the T. and N.O. Railway, also C.N.R. transcontinental to Quebec Boundary line, but the Counties of Lanark, Carleton, Russell, Stormont, Prescott, Glengarry and Renfrew are included for cheese factory inspection.

MISS NINA GARDEN, *150 Herkimer Street, Hamilton.*—Miss Garden's district is Niagara Falls, Fort Erie and South Lake Erie, West, excluding Port Dover, Simcoe, Woodstock, and includes Tavistock and North C.N.R. Main line between Hamilton and Eastwood.

MRS. ELEANOR GURNETT, *102 Kingswood Road, Toronto.*—Mrs. Gurnett's district is West side of Yonge Street to and including East side of Bathurst Street, also North to City limits and South to and including the Island, City of Toronto, and then North and West to Quebec and Manitoba Boundary lines excluding Fergus, Caledon East and Linwood.

MISS N. HAMILTON, *1 Osborne Street, Ottawa.*—Miss Hamilton's district is bounded on the West by Napanee, Yarker, Sharbot Lake, Pembroke, Renfrew, Derland, Thorncliff and Kearney, and North and East to Quebec boundary.

Mrs. G. E. Hornell, *50 Mimico Avenue, Mimico.*—Mrs. Hornell's district is West side of Bathurst Street to City limits, North also South, City of Toronto and West including Shakespeare, Innerkip, Caledon East, Fergus and Linwood.

S. J. Mallion, *74 St. Vincent Street, Stratford.*—Mr. Mallion's district is Fordwich, Gowanstown, Stratford, St. Mary's, London, St. Thomas, and Port Stanley, South and West to Border lines, including Ingersoll Junction on the C.P.R. and North including Teeswater, Kincardine and Goderich.

J. Monteith, *Queen Street, Humber.*—Mr. Monteith's district is the City of Toronto, West side of Yonge Street, including the water front and West (excluding Spadina Avenue and Road) and North to City limits and East including Greenriver, and North excluding Wallace, Bancroft, Airy, North Bay, French River and Caledon East, but includes Southampton, Harriston and the Bruce Peninsula.

Miss J. Ogilvie, *118 Centre Street, St. Thomas.*—Miss Ogilvie's district is bounded on the East by Port Dover, Simcoe, Woodstock, Tavistock Junction, Palmerston and Teeswater and Lake Erie on the South and West, and North-west by Lake Huron and River St. Clair.

Mrs. E. Scott, *138 Lawrence Avenue, W., Toronto.*—Mrs. Scott's district is East side of Yonge Street to City limits, North also South, City of Toronto, and East excluding Napanee, Yarker, Sharbot Lake, Pembroke, and Renfrew, but West and North including the County of Ontario.

Hugh Stevenson, *22 Hambly Avenue, Toronto.*—Mr. Stevenson's district is Toronto Harbour East of the Don River and C.P.R. to Leaside Junction and City boundary line to Victoria Park Avenue.

H. A. Winnett, *75 William Street, London.*—Mr. Winnett's district is the Province of Ontario excepting the City of Toronto, for the purpose of investigating polishing, grinding and buffing plants.

Apprenticeship Board

Chairman: J. B. Carswell, Hamilton

Members: E. Ingles, London; F. S. Rutherford, Toronto

Chief Inspector: A. W. Crawford. Assessment Officer: George Chambers.
District Inspectors: George B. Evans, Fred. J. Hawes, Hamilton; Walter Thorne, Toronto; J. R. Johnson, Ottawa; Charles E. Needham, Windsor.

The past year has been a time of testing for *The Apprenticeship Act* which has been amended and modified to meet changing conditions in the construction industry. Despite unfavourable industrial conditions accompanied by increasing unemployment on an unprecedented scale, the scheme of apprenticeship being developed under the Act has been endorsed by a majority of the employers affected and has secured the continued support of all branches of organized labour.

Opposition of the Act

Early in the year, active opposition developed in several centres throughout the province and it became apparent that the employers were divided in their opinions regarding the value and operation of the Act. In order to clarify the situation and, if possible, satisfy those who felt that the Act was being administered in the interests of large contractors only, the Minister authorized the appointment of Mr. L. H. Kingerley in October to make a survey and report on the situation. The report which followed three months of investigation in various centres revealed that the opposition was fostered by groups of employers and individuals, many of whom were misinformed or lacked information regarding the provisions and operation of the Act. The bulk of the opposition centred around the assessment scheme which many regarded as an extra educational tax which added an unwarranted burden on the industry especially in times of depression.

Amendments to the Act and Regulations

Following the survey, the Government interviewed deputations of employers and employees and, on the recommendation of the Provincial Apprenticeship Committee, decided to amend the Act and Regulations so as to give all concerned equal opportunity for sharing in the work of developing apprenticeship along lines acceptable to the industry.

The amendments which were passed by the Legislature at the last session provided for replacing the advisory Provincial Apprenticeship Committee by a board of three members, one representing employers, one representing employees, and the third the Provincial Department of Education. This board is entrusted with administrative responsibilities, subject to the approval of the Lieutenant-Governor in Council and acts under the immediate direction of the Minister of Labour.

The Act now provides that employers or employees acting individually or collectively, may at all times petition the board in connection with suggested changes in the legislation or regulations. Such petitions must be dealt with within one month and both employers and employees in the trade affected must be thoroughly canvassed before suggested changes are put into effect.

Local Trade Committees

Provision is made for the appointment of local trade apprenticeship committees, consisting of an equal number of employers and employees. These committees, in co-operation with the District Inspector and the Provincial Board, supervise the selection and training of apprentices in their respective districts. The experience of the past few years has demonstrated that it is difficult to secure the appointment of representative committees which will function effectively. Committees which were appointed when the Act first came into operation ceased to function as joint bodies and, during the past year, the district inspectors have dealt separately with representatives of employers and with the various bodies representing organized labour.

Examining boards

In the city of Toronto, arrangements have been made with the plumbing and electrical trades whereby all fourth year apprentices are examined by boards representing both the unions and employers and no apprentice may receive his diploma who has not passed these examinations. The technical schools in Toronto co-operate with these trades by providing necessary accommodation, equipment, etc. A similar arrangement exists in the plumbing trade in the city of Port Arthur.

Special Day Classes

During the past winter, special day classes for first and second year apprentices were held in the cities of Hamilton, Toronto, and Ottawa, during the months of January and February. The attendance at these classes was considerably less than in the previous year, being reduced from 314 to 263, as indicated by the attached table No. 5.

For the first time an effort was made to follow approved courses which have greatly facilitated the operation of all classes. These courses were prepared by two specially appointed men, Messrs. J. B. Temple, and J. A. G. Easton, under the supervision of the Provincial Apprenticeship Committee, acting in co-operation with the Ontario Training College for Technical Teachers in Hamilton, with instructors of apprenticeship classes, and with representatives of employers and employees in the designated trades. At the close of the courses, the apprentices and instructors submitted criticisms and suggestions which will enable the Apprenticeship Board to have the courses enlarged and amended to better meet the special requirements of such classes.

Despite the undoubted success of these classes during the past winter and during previous years, there are still a large number of employers and others who feel that such instruction is not necessary and that apprentices can receive adequate trade training on the job and through the medium of the evening classes.

Those employers, however, who have visited the classes are unanimous in their praise of the work done and, with few exceptions, admit that the classes are needed in any organized system of apprenticeship. During the past winter a deputation of members of the provincial Legislature visited certain classes in Toronto and expressed amazement at the quality of the work and the evident interest displayed on the part of the apprentices.

SOUND PICTURES AND PUBLICITY

In order that the public might have some idea of the nature and quality of these classes, a special sound film was prepared and exhibited at the Canadian National Exhibition. Samples of the work done by apprentices in these classes were also on display and many favourable comments were received from visitors throughout the Dominion, from the United States, and abroad.

The Slides Branch of the Motion Picture Bureau kindly co-operated with the Apprenticeship Board in preparing an illustrated lecture which has been used on various occasions by members of the board and staff of the Apprenticeship Branch and has also been used by outsiders in connection with educational and other meetings. Mr. Ingles, a member of the board, has presented the illuminated lecture and motion pictures in various parts of Western Canada.

OPERATIONS OF THE BOARD

Shortly after its appointment, the board met a deputation representing the master painters of the province to discuss various problems in connection with day classes and assessment. The board has also met deputations representing trade unions and a number of employers have either met the members of the board in person or forwarded complaints and suggestions in writing. Members of the board have held several conferences with employers and representatives of organized labour in such places as Hamilton, St. Catharines, Brantford, and Sudbury.

The assessment officer and the district inspectors held frequent conferences and meetings in most of the larger centres throughout the province, in addition to keeping in personal touch with the apprentices and their employers.

In this way, the board and the staff of the Apprenticeship Branch are endeavouring to have the Act administered in a manner acceptable to all concerned. Constructive criticism is welcomed at all times and, despite unfavourable conditions, most of the employers to whom apprentices have been indentured have shown a willingness to co-operate and an earnest desire to help the boys.

DECREASED REGISTRATIONS

The greatest obstacle in the way of development during the past year has been the lack of work, which has not only made it impossible to keep indentured apprentices regularly employed, but has also made it extremely difficult to arrange for new boys to enter the designated trades. The number of active contracts has decreased from 1,030 at the end of October, 1931, to 826 at the close of the past year. Full particulars regarding the enrolment in each trade are given in tables No. 1 and 2.

ASSESSMENT RETURNS

The unfavourable conditions in the building trades have been reflected in the decreased amount of the pay rolls, as shown by returns in connection with the assessment scheme. During the fiscal year 1930-31, 2,840 employers were assessed to the amount of $32,852, of which over 88 per cent. was collected. (See appended table No. 4.) During the past year, assessment notices were sent to only 2,691 employers and returns submitted indicated such a falling off in the amount of the pay rolls that it was decided to suspend assessment rather than impose any additional expense on the employers. This action was made possible by the fact that a surplus of $19,250 had been accumulated during the past two years, which is more than adequate to pay the necessary charges in connection with day classes during the coming winter. This action has been appreciated by employers and it is anticipated that with the return of more normal conditions the revised scheme of apprenticeship will make rapid headway.

At the close of the year, new booklets were printed, containing the amended Act and complete regulations. These are available to all interested persons and contain full particulars regarding the operation of the Act in all designated trades.

TABLE No. 1

REGISTRATION OF APPRENTICES BY TRADES FOR THE FISCAL YEAR 1932

REPORT

OF THE

Minister of Education

FOR THE YEAR 1932

To The Honourable Herbert Alexander Bruce, M.D.,
Colonel in the Royal Army Medical Corps, F.R.C.S. (Eng.),
Lieutenant-Governor of the Province of Ontario.

Your Honour,—

I beg leave to present the Report of the Department of Education for 1932.

The trying period through which the school system is passing should be examined from two points of view: the educational and the financial. The first concerns the efficiency of the schools and the method of carrying on the work in the face of unusual obstacles. From this standpoint the situation presents many encouraging features. The fidelity of parents and guardians in keeping young people at school has not diminished, and the figures of attendance are remarkable. Inspection of both elementary and secondary education reveals a satisfactory condition in all essential respects. The schools were never more strongly and adequately staffed, and trustee boards have shown their usual good judgment in selecting the best teachers from the large choice which present conditions afford them. Without considering pupils who receive their training in private establishments beyond provincial control, the enrolled school population in 1932 was approximately 828,000, which means that more than 25 per cent. of the whole population of the Province was at school. Add to this flourishing indication the fact that the facilities for learning—in accommodations, equipment, text-books, and so forth—far exceed those which the fathers and grandfathers of this generation possessed, and it is well to reflect that education in Ontario has not been deterred from going forward at a pace highly creditable to the Province, without permanent injury from the existing economic stringency.

Economic Stringency

It is on its financial side that the school system has been more severely strained, and even in some local areas put to great embarrassments. The cause of this, as is well known, is the business depression existing throughout the world with the unemployment which is the inevitable consequence of it. The sacrifices made by parents, by teachers, and by ratepayers generally, during the past year, to maintain the schools in operation, cannot, and should not, be ignored, because the financial aspect of the whole picture is the one which is uppermost in the minds of the people. The handicaps have been of various kinds. The difficulty of meeting ordinary taxation is perhaps the most serious. This has forced curtailment of expenditures, a result not wholly without good effect, since it would be manifestly unwise to launch out into new obligations and to increase a burden which, in prosperous times, would be the natural procedure. There is also a large surplus of teachers who find themselves unable to secure positions, and this has entailed upon many individual teachers a great deal of personal suffering for which much sympathy must be felt. It is true that, owing to lack of other occupations, the training schools have been overcrowded through the voluntary action of candidates themselves. But this does not lessen the reality of their hardships for the time being, while those who are actually engaged in teaching have had to continue their duties at lower salaries due to the drive for economy. Yet another cause of difficulty is that the municipal machinery provides the method for raising school taxes, and municipal embarrassments have, in certain localities, deprived school boards of the support which ratepayers levied on themselves for the purposes of education, and have also curtailed, or delayed, the statutory contributions of the municipalities. All these factors, coming together, have combined to impress the need of rigid reduction of expense, wherever practicable, while leaving untouched the fundamental requirements for imparting a sound training to our youth.

Future Economies

At this juncture all public bodies charged by law with the administration and support of education will be well advised to weigh not only present measures to curtail expenses but those which will apply to the future. It is commonly asserted, and not unkindly, that all modern communities and organizations have enlarged their expenditures to a greater degree than prudence dictated, and without due forethought of the lean years that arrive periodically. Notwithstanding the special claims of education, it too must be kept within the bounds set by the ability of the people to pay. Several valuable suggestions to this end are now under review by school authorities, and in some cases have reached the stage of actual experiment.

Because of the abnormally large enrolment in the secondary schools, many boards are at their wits' ends to discover where they are going to house their pupils. Two methods have been favoured. First, the rotary plan, by which all the accommodations of the school are used to their utmost capacity every period of the day—the classes move from room to room, the science laboratories, the assembly hall, the gymnasium, are in use all the time. This scheme has been adopted in a great many of the larger schools where the classrooms are of approximately the same size. Second, the so-called "staggered" classes, a word borrowed from other lines of activity to express alternation or rearrangement of position. This plan has been adopted with good results in the Central Collegiate in London, and is to be tried in the Sudbury High and Vocational School next year, where it is expected that accommodation sufficient for about 700 students will, by lengthening the school day and shortening the noon recess, be sufficient for the expected enrolment of 1,000. There may be objections to this plan urged by the homes where there are several pupils in different classes and a consequent partial upsetting of the present domestic arrangements results. It is not anticipated, however, that these objections will weigh against the alternative of footing the bill for an extension to the school buildings. It is possible indeed that this plan, although now only in the experimental stage, may prove to be advantageous from an educational point of view, and may be adopted in many other urban centres. Among its advantages is that the diligent student, by arrangement of timetables, has a choice of subjects, more freedom to advance in the school and to finish his course. It has the obvious advantages of making use of the expensive school plant for a longer period, and of giving the opportunity for some of the so-called homework to be done in school, to the relief of the parents concerned.

Elementary Course of Study

Another practical step in the direction of economy, applying particularly to urban schools, is to teach the whole elementary course of study in the elementary schools. The transfer of Fifth Class instruction, as permitted by law, to high schools, where it is termed the Lower School, has unquestionably led to increased expense. I am not urging the creation of the new type of school known as the Intermediate School, although the voluntary adoption by school boards of the policy of making the elementary school carry out its own course of instruction, as was done in former times, would be recognized at once as a practical illustration of wise economy. The curricula of forms IV and V of the elementary school are now sufficiently elastic to permit of the inclusion of practically all of the Lower School courses of the academic high school, and could indeed be made to take in some of the lower grade courses of commercial and other vocational schools. A change in the law, made in 1933, provides that the counties may pay their share of the cost of county pupils who enter elementary schools and pursue courses of study which they would otherwise have to take in the high schools. This is a step towards the establishment of Intermediate Schools without involving additional expense. It will indeed be found cheaper in many centres to encourage the elementary schools to teach all the subjects which they are, both by tradition and legal enactment, entitled to teach, than to carry over these courses into the high schools. Not only so, but, if the high schools are relieved of all or part of the Lower School courses, it may be possible for courses to be offered in our best collegiate institutes in advance of anything that is now taught in the Upper School, and in this way relieve the universities and the training schools of some of the preparatory work which is not really of university standard.

Cost of Examinations

The excessive resort to Departmental examinations continues to be a cause of unnecessary expense, both to the Province and to the parents of pupils. These examinations are for the use of those who intend entering the professions or the universities. They are written upon by thousands who have no such object in view. The declared purpose of those who thus put ratepayers and the Department to needless cost is that the certificates of junior or senior matriculation, when obtained, can be conveniently employed in the quest for business situations. It is claimed that commercial and financial concerns demand them as an easy method of determining the academic fitness of applicants for positions in offices, banks, and other occupations. In effect this argument means that the school record of the pupil—his grasp of the subjects taught, his ability to think for himself, his diligence and application to the duties of life—is of little value. The contrary is the case. The school diploma is secured by the successful promotion of the pupil from class to class, and is the best indication of the quality and character of the youth in our schools. A written examination on the subjects of the course is inferior in determining fitness for a business career. It is true of the Collegiate Institutes and High Schools generally that the diplomas are proof that the holders have done the work and passed the school examinations. They afford adequate evidence of academic efficiency which should satisfy any reasonable business man. Not only in Ontario is the mania for writing unnecessary examinations causing protests. Lord Eustace Percy, formerly Minister of Education in Great Britain, has uttered a public condemnation of the practice. In a speech he has declared:

> "Nobody intended that these examinations should set up a kind of universal national hurdle over which every sheep in the country must jump if he is going to be an efficient sheep in after life. . . . It is high time that universities, business men, the Board of Education and everybody sets out to get rid of this thing which is becoming a mere incubus to education."

My Department has set the example of checking the practice, as far as practicable, by providing methods by which the teachers' reports are accepted, in lieu of written tests, for the High School Entrance, the Lower School, and the Middle School examinations. The boy or girl reasonably attentive during the school year need not fear failure to secure the teacher's recommendation. The idle and the careless are driven to write, as well as those who come from schools outside of provincial inspection. It is not desired to adopt coercive measures, but some remedy may have to be devised in view of the cost to parents and to the Province of heedless persistence in a mistaken educational policy.

It is probable that the general public are not fully aware of the proportions attained by the system of written examinations. Last year there were 95,719 candidates in the Lower, Middle, and Upper School divisions of the High Schools who wrote, and as only 17,509 candidates entered the Upper School, or Senior Matriculation tests, it is manifest that many candidates out of the total 95,719 were not seeking university or professional careers, but had other objects in view. As I have already said, the school certificate, which is signed by the School Principal on the basis of the work done, and is formally endorsed by the Minister, is a better proof of fitness for any branch of business occupation than the departmental examination which the universities and professions demand, as their legal powers over their own standards give them the right to ask, as suitable qualifications for their students. There arises, also, the question of expense—to parents and to the Province. The amount of the fees received does not pay the cost of examinations and, while the Department has reduced the fees to examiners, to presiding officers, and to clerical assistants, there is still an excess of expenditures over receipts, smaller in amount, it is true, but considerable. I have every confidence that parents, by intelligent study of the matter, will aid the Department and, at the same time save themselves expense, by placing reliance on a school certificate rather than having their children take a departmental examination which may be of no real value to them.

Legislation of 1933

Certain conditions in the school system, to which attention was drawn during recent years, were met by amendments to the school laws during 1933, and the chief of these may conveniently be referred to here. The question of the township grants on salary to rural boards was revised. These grants had been increased several times during the period which had elapsed since 1907, and were felt to be larger than the present stringency warranted. A revision of the scale was, therefore, made. In order, however, to avoid as far as possible that the saving to the townships should fall upon the school sections, the mode of calculating the Legislative grants has been so arranged that any loss in township grants may be made up by gains in the amount of Legislative aid. The relations between the school boards and the municipal corporations should be friendly and in the nature of co-operation. To this end amendments have been made that municipal councils which have to provide money for school purposes shall be fully informed respecting the financial position of the boards which present the estimates. Yet another enactment is designed to check any tendency on the part of trustee boards to accumulate surpluses. Complaints have been made to the Department from time to time by municipal councils that full information regarding the school estimates are not submitted to them by the school boards. While the municipal councils have no power to limit the school boards' estimates, it is only fair that they should be in full possession of the facts. In this connection it is pointed out that a school board has no power, under the Act, to collect money beyond its needs, in other words, it cannot build up a surplus at the expense of the ratepayers. The duty of municipal officials to pay over to the boards any school funds in their possession has been made clear. In a few cases county treasurers withheld the Legislative grants to school boards because of the fact that the townships in which the schools are situated are behind in their payments to the county. The Legislative grants are sent to the school boards through the county treasurer and the township treasurer simply for convenience.

Amendments were adopted for the temporary closing of rural schools where the attendance is so small as to make it advisable to arrange for the education of the pupils in adjacent schools. These temporary arrangements for the education of pupils do not involve the change of school section boundaries, and any school may be reopened as soon as the Minister, or the trustees, feel that the number of children make the reopening of the school an economic step. A change in the law has also been adopted to relieve counties from the cost of high school education under specified circumstances. In certain counties adjacent to cities or separated towns, large suburban townships, and towns or villages with a population of 1,200 or over, have been sending their pupils to the schools in the adjacent city or separated town, and the cost of education of these pupils has been a charge against the whole county, including municipalities within the county in which there are high schools. This is obviously a burden on the county which it should not be called upon to bear. Pupils from these areas will, by this amendment, be considered as far as the schools in the cities or separated towns are concerned, as non-resident pupils, and as such the boards in the cities or separated towns will have a right to charge these pupils fees, which cannot be in excess of the average cost per pupil in the school. The township, town or village concerned, may, however, by agreement with the board of the city or separated town, pay all or part of these fees. The pamphlet containing these and other amendments is obtainable at the Department by those who may not have already received a copy.

Elementary Schools

While it is true that world-wide conditions continue to exert a depressing effect on life in the homes as well as on the individual, it cannot be said that the bread-winners are without hope for better days. In so far as their children are concerned, in spite of existing difficulties, the value of the school is being stressed one might say more than under normal conditions. There is no desire to bring about such changes as might, in any way, affect the general efficiency of the elementary school or to deny to the growing boy and girl the advantages that should and must continue to be theirs. This is no less the case even in those parts of the Province where economic conditions appear to be at their worst. It is a hopeful sign of these days that over 25 per cent. of the population are in the school room every day of the school year. It augurs well for the home life of Ontario in the days that are ahead that parents in those parts of the Province in which the school opportunities may be expected to be inferior to those in the more thickly populated areas are equally ambitious for their children. The determination of the parent, especially in Northern Ontario, to see that some form of education, limited as it may be, is provided for his child is shown in his continued efforts to secure a school or to have the roads improved or constructed that will make the school more accessible or, where these fail, in his appreciation of the visit of the school car from time to time and of the school lessons that the weekly mail may bring as the result of the correspondence courses furnished by this Department. Hundreds of boys and girls are receiving their elementary education in this way and are making real progress.

In recent years, there has been a steady increase in the interest of trustees in school matters. This must be attributed to the sympathetic or critical attitude of the parents and to various organizations. It may safely be stated that while the mother is observant of what the child is doing in the school, she is equally interested in what the teacher is doing and in the conditions under which the teacher is working. This means an increased interest on the part of the ratepayers in the question of the election of trustees. There is no more hopeful sign of the interest of the ratepayers in the school than in the occasional action on their part in calling special meetings to discuss school matters and the conduct of school affairs by the trustees.

In urban as well as in rural communities the increase in the number of Fifth Form Classes continues. The trustees on the representations of ratepayers are showing a greater readiness to meet requests for the establishment of these classes which are being given their true value as part of the Public School courses.

The supply of qualified elementary school teachers is at present much greater than the requirements in the schools. In spite of reduced salaries resulting from an over-supply of teachers as well as from economic conditions, the character of the teachers' work will not be affected. The teachers will continue to do their work and to maintain the high standard of their profession. For the first time, the number of teachers in training at the Normal Schools who are taking the courses for First Class certificates exceeds the number in attendance who are taking the Second Class courses. For some years, teachers in the schools holding Second Class certificates have, I am pleased to say, recognized the fact that they cannot stand still but must make improvement and have, accordingly, been obtaining First Class certificates while performing their school duties. Their zeal in this respect has been most marked. One effect of this voluntary action is shown in the policy of some boards when making new appointments to select only those who hold the higher certificate. In view of the over-supply of teachers, the great demand of boards for teachers with higher qualifications, and in view also of the recognition on the part of the teachers of the value of the higher qualifications, commencing with September, 1935, all applicants for admission to the Normal Schools shall hold the Departmental certificates of standing which are prescribed for admission to the courses leading to First Class certificates.

I have already referred to the influence and the interest of the home in the school. There is one respect in which the school is having its influence on the home. Teachers, under the direction of their Inspectors, impress both on pupils and on trustees the value of having an adequate supply of books for supplementary reading. The pupils are reading this literature under the teacher's direction in spare periods and at home. It is needless to point out that the parents are becoming interested in the good literature that the trustees are placing in the school library. Publishers are co-operating by supplying these books at a minimum of cost. The general benefit both to the individual pupil and to the home is incalculable.

Throughout the Province there have always been, and probably will continue to be, in every community a small number of children for whom the general school provisions fail to offer what they need. These are the handicapped children. In one group are those who, either from birth or as a result of misfortune, are blind. In another group are those who, either from infancy or also as a result of misfortune, have been denied the sense of hearing. For the former, the School for the Blind at Brantford exists in which specially trained teachers are giving blind boys and girls the necessary education that will assist them in taking their place in society. For the second group, the School for the Deaf at Belleville exists, and the large attendance of children, some of whom are quite young, is evidence of the appreciation of the parents of the instruction that is given. There is, however, a third group of children who when sent to the regular elementary schools are found not to profit rapidly by the direct teaching methods. There was a time when the attitude of the public towards these pupils was without sympathy. That state of affairs, however, is of the past and to-day, largely as a result of the devotion of teachers who are in charge of these pupils, citizens as well as trustees have come to realize that such pupils are entitled to a form of training adjusted to their requirements. The Department is co-operating with the school boards in guiding and assisting them in this important matter.

Secondary Schools

Immediately following the close of the Great War in 1918, there developed a very marked expansion in the facilities for secondary school education in the Province. Additional or improved accommodations were provided. Additional provisions were also made for vocational training. These new and improved facilities entailed considerable sacrifice and heavy expenditures. In the light of present school conditions, although the tendency may be to criticise these heavy expenditures that were incurred, the foresight and judgment of those who were responsible for the increased accommodations must be respected. The rapid increase in attendance at the secondary schools isproof of the wisdom of providing additional accommodations. In 1932, the attendance at the secondary schools was over 80 per cent. in excess of the attendance ten years prior thereto, and if the vocational schools are included, the increase is 120 per cent. To-day the schools are overcrowded.

With the decision to provide greater accommodations came the natural decision to instal new and up-to-date equipment also at considerable cost. The cost of material rose. In addition, the teachers began to secure better recognition of their services and higher salaries began to be paid.

While the taxpayer in normal times is never hesitant to accept new obligations and to make necessary sacrifices for education, the economic conditions that have developed with considerable and somewhat alarming force and which now appear to be at their worst have compelled him to insist on retrenchment. The result has been a careful stocktaking of the financial resources of municipalities. This process will have beneficial results not only in the direction of economy but in directing the attention of the parents and guardians of school children to the secondary schools from a new angle. Time was when the boy and girl with their Entrance Certificates entered the High and Continuation Schools with nothing more than the school books and best wishes of his parents and without any very definite expectations on their part. The great majority gave no thought to the future occupation of these pupils. I am satisfied that there will develop a truer appreciation and evaluation of the secondary schools. There will be more co-operation between parents and teachers and the former will expect as never before some form of practical guidance on the part of the teaching profession and a greater degree of adaptation of the courses to the goal and occupation which the pupil, with the approval of the parent, has in view. This means economy of effort, economy of teaching energy and economy of cost. To the High School Boards, to the local municipalities and to county councils, the final result and the main one to be attained should be young men and women better prepared for their places in society.

Legislation has been enacted with a view to bringing about a more accurate presentation by School Boards of their actual needs to the municipal authorities with consequent co-operation.

It is only right that I should make special mention of the attitude of the members of the teaching profession in the present circumstances. With characteristic unselfishness and sacrifice, they have sought to help their employers, the trustees, not only by cheerfully accepting reductions in salaries but also by indicating their readiness to accept increased responsibilities. Their zeal for the advancement of their pupils in the face of disturbing conditions continues unabated.

Vocational Education

The standard of efficiency in the Vocational Schools has shown considerable improvement during the past year. With a view to progressive improvement, the inspectors of this branch required the deposit of all June examination papers, with list of promotions, for scrutiny and comparison. This arrangement has had a good effect on the character of the instruction offered and the organization of the schools generally. By consultation and suggestion principals and staff are encouraged to state their difficulties to the officials of the Department, with satisfactory results. The annual conference of principals at Easter has also proved a valuable medium for the interchange of ideas.

Building expansion has necessarily been curtailed on account of economic conditions, but statistics for 1931-32 show an increase of three schools over the preceding year. The three additional schools represent commercial departments which have been taken over to operate under The Vocational Education Act. There are now sixty-five day schools in operation compared to sixty-two in 1930-31. Excessive enrolment of day school pupils has created a problem in many municipalities, the higher forms being congested by the return of pupils usually in employment. Evening class registration, on the other hand, has suffered. Adult workers are very unsettled, and attendance has fallen considerably. A comparison with earlier years, however, shows a remarkable and sustained growth in evening class enrolment up to last year.

Probably the outstanding achievement during the year has been the reduction effected in the price of text-books. This reduction was brought about by the announcement of Circular 52 in which were listed the text-books recommended and approved for use in Vocational Schools. The texts were selected on a basis of suitability and price and were shown with "list" and "net" prices appended.

This effort, on the part of the Department, represents a material saving to the students and has been heartily endorsed throughout the Province.

Much progress has been made in developing a suggested course of training in Vocational Schools to meet Entrance requirements to Training Schools for Nurses. Discrimination against girls vocationally trained was discovered in some instances, and, consequently, I appointed a committee in 1932 to draft a course of study suitable to all those concerned. The Provincial Department of Public Health, the University, the Registered Nurses' Association, the School Principals and my Department were represented on the committee, and its recommendations have already been accepted by the Department of Health, the University of Toronto, the University of Western Ontario, and the Department of Education. Contact is being established with all recognized Nursing Schools, with the object of securing a universal standard of entry within the borders of Ontario, without detriment to the vocationally trained student. This course of study is now ready for publication and should be issued to the schools in the form of a bulletin in the near future.

The Training College for Vocational Teachers at Hamilton has proved of much benefit to the teachers who have taken the course there, resulting in more carefully organized courses and improved methods of presentation. The graduates of the college have been generally engaged by the Advisory Committees, although a few qualified teachers of practical subjects remain unplaced. Care is being exercised to regulate admission, as far as possible, to the known requirements of this branch of the profession.

Schools with French-Speaking Pupils

By the plan adopted in 1927, the improvement of the conditions in the schools attended by French-speaking pupils was made to depend very largely upon the personal supervision, direction, and active assistance of officers of the Department of Education, and more particularly of the Director of English Instruction and the Director of French Instruction appointed specially for this service. While the chief duty of these officers is to visit the schools with the local inspector and to assist teachers to improve their instruction, they were directed to maintain a continuous survey of the schools with a view of keeping me informed regarding conditions and progress. In my annual reports I have noted the continuous improvement in the conditions of the schools under the new plan as shown by the statements which I have received from these officers.

The plan has now been in operation for five years and I have instructed the officers to make a more detailed report with a view of comparing the present conditions with those found in the schools when the Committee of Investigation made its report in 1927. This report will be found on page 22. It is a concise statement based upon personal examinations of the schools. No attempt, therefore, is made to summarize it.

Respectfully submitted.

GEO. S. HENRY,
Minister of Education.

APPENDIX A

THE SCHOOLS AND THE UNIVERSITIES

It is a tradition in this country that the higher educational institutions, that is the universities, colleges, and professional schools, shall, to a great extent, determine the courses of study in the provincial secondary schools. If these schools are primarily preparatory schools, this tradition is well founded, and should be maintained. If, however, the facts bear out the contention that to prepare pupils for college is not their main function, then it is time to cast about for evidence that the courses of study now offered in these schools are the best possible for the thousands of young people who fill the classrooms. A brief analysis of the figures for 1931 and 1932 discloses some significant facts. It may be argued that because of the world-wide depression school conditions during these years were unusual, and that for this reason conclusions drawn from data obtained in this analysis may be misleading. During these years the schools were filled. However, it should be pointed out that congestion was most apparent in the upper forms, where students were found in large numbers who in normal times would have left school at the end of their middle school course and gone to work, so that whatever decrease there might have been in college enrolment in these years because of financial stringency was more than made up by the increased number of matriculants. So if these 1931 and 1932 figures are used, neither the schools nor the colleges can complain that a distorted picture is presented.

It is interesting to note that the increase in enrolment of academic secondary schools in 1931 over that of 1930 was 2.9 per cent., while the increase in enrolment in 1932 was 10.6 per cent. over that of 1931. This large increase in 1932 was due not only to the lack of employment for young people, and to the increasing demand by public and separate school boards for teachers holding first-class certificates, but to the fact that in that year the Provincial University raised its standard of admission to that of honour matriculation in a number of subjects, so that the student wishing to go to Toronto University had to spend at least one more year in the secondary school.

On the last day of May, 1931, there were enrolled in the academic secondary schools 68,807 pupils. During that year 18,921 pupils left school, and of these 1,935, or 10.2 per cent., entered colleges or universities. The enrolment on the last day of May, 1932, was 76,133. During that year 17,659 pupils left school, and of these 1,865, or 10.5 per cent., left to attend colleges or universities. It is thus safe to say that approximately 90 per cent. of the students who leave school annually are not immediately interested in college or university admission requirements.

It is no doubt the possibility of their being interested in matriculation certificates at some time in their lives that induces many pupils to take the courses that lead to matriculation, but more than anything else it is the insistence by employers on the matriculation certificate as the measure of an applicant's educational attainment that has made the examination leading to this certificate loom so large in the public eye. Until the public is convinced that there are measurements more reliable than any type of external examination yet devised, the schools will be compelled to orientate their courses with departmental examinations in view.

The question arises as to whether some compromise as to courses and examinations might not be brought about which would be satisfactory to all concerned. Theoretically, it should be possible to adopt a school curriculum and a programme of tests and measurements which would do three things, viz., provide a good general education, satisfy the public that the holder of a graduation diploma from a school offering this curriculum has had the kind of training which will fit him for a job in the business or the industrial world, and, lastly, enable the university or the professional school to select from the graduates of such a school those whose past achievements and mental calibre give a reasonable guarantee that they are the stuff out of which successful professional men are made. Under present conditions there is too much wastage in college. Few of those who with difficulty and after a comparatively long school course are able to scramble over the matriculation hurdle should attempt a college course. The democratic ideal of education of which we on this continent are so proud does not mean that all shall be given the same education either in degree or in kind but that each shall have educational opportunities commensurate with his abilities.

In his latest report the President of Toronto University points out that out of an enrolment of 929 first-year students in the Faculties of Arts of all the Federated Universities, 198 failed, 168 were conditioned in one or more subjects, and 39 were debarred from further attendance. In the Faculty of Medicine, out of an enrolment of 143 first-year students, 18 were conditioned in one or more subjects, and 30 failed outright. In the Faculty of Applied Science, there were 315 students enrolled in the first year; of these, 80 were conditioned, and 57 failed. In the Faculty of Household Science, there were only six students in the first year; four passed and two were conditioned. In the Faculty of Forestry, the first-year enrolment was 28; of these, four were conditioned, and seven failed. In the Faculty of Dentistry, the enrolment in the first year was 45; of these, 13 were conditioned, and seven failed. In the Ontario College of Education, the enrolment in the High School Assistants' course was 464; of these, 68 failed. That is, out of a total of 1,930 first-year students, 367 failed outright, or over 19 per cent.

Figures are not available from the other universities, but it is probable that similar results are to be found.

As the requirements for admission to the University of Toronto are higher than in any other university in the province, it is not unreasonable to infer that, despite the sorting effect of a rigid and searching entrance examination, there are students entering the universities every year who are not of university calibre and who, when the support of the teachers is to a large extent taken away from them and they are left to do a considerable amount of independent work, fall down lamentably. Such students are not helped to any appreciable extent by a taste of college life—the contrary is often the case—and are a financial burden to the state. If it were possible for the universities to admit to their halls only such matriculants as have proved throughout their school course that they are likely to succeed, not only would the cost of the university to the state be decreased but many high school graduates would at an earlier age find their proper niche in life. It would, of course, be very delightful if all pupils who leave the secondary schools could have a college course, but in order to bring this about college standards would need to be lowered and the university would have to become a sort of glorified high school.

In attempting to map out a school programme which will enable the universities to select from among those who have completed this programme the students who should be admitted to the universities, one is faced with the fact that at present the Ontario universities require at least one subject of study—Latin—which does not fit into the core of subjects which should be taken by all students attending secondary schools for the purpose of obtaining a general education. Because of the university requirement in this subject, approximately 84 per cent. (according to latest returns) of the students enrolled in the lower school classes of the high schools and collegiate institutes are studying Latin. As approximately 43.5 per cent. of the lower school students leave school after one or two years' attendance, and as a very small precentage of those who remain ever reach the university, it would appear that unless Latin has some intrinsic value sufficient to justify the time spent on it in the schools by pupils who will never proceed beyond the rudiments of the language, it might properly be omitted from the courses of study taken by the vast majority of pupils. Its value to the student who will discover through it something of the civilization and literature of the ancient world is unquestioned, but this need not concern us here. It will probably always be a subject of study for the few. That Latin has a disciplinary value as a subject of study is also unquestioned. But it remains to be proved that this value is commensurate with the time spent on it by thousands of pupils in the lower school. The pupil who spends two or three years on Latin grammar and a few chapters of Caesar gets through the medium of the language itself little knowledge of the ancient world. The same arguments that bolstered up the case for Greek for so many years are now being used to justify the study of Latin, with the added argument that the study of Latin helps the pupil in English more than Greek does. It is not many years since the Classical Associations of the United States decided to rest their whole case for the study of Latin on this latter argument. It would be well to consider here whether more intensive study of English and the reading of good translations of the great Latin and Greek classics will not do for the average student more than the study of Latin and Greek has ever done. Many of us who were brought up in the classical tradition will remember that after laboriously translating hundreds of lines of the Illiad and the Odyssey, we got our first real thrill from Homer by reading Butcher and Lang's translations. One would not advocate waiting until he could read the New Testament in Greek before making his acquaintance with the gospels.

It is, of course, desirable from both the educational and the practical standpoint that in the programme taken by all students who intend to carry through a four or five years' course in an academic secondary school there should be at least one foreign language. In this province, French is the foreign language which for practical and cultural purposes should find a place in the school programme. With some modification of our present method of teaching elementary French it will be possible to give pupils whose school life ends at the completion of the lower school a two years' course in French which would enable them to obtain at first-hand some knowledge of French literature and at least the ability to read a French newspaper. Such a course might very properly be offered also in the vocational schools, with the option or addition of German.

In all secondary schools, however, whether of the academic or the vocational type, there should be an irreducible minimum of subjects—a core—taken by all students. This involves greater difficulties than appear on the surface. To appraise a school curriculum one must have some accepted standard by which to judge it. At the present time perhaps more than ever before economists find it difficult to assess values. Educators have always found this difficulty, and while in the main the aims in education of the schools have not varied greatly through the years, the content of the courses and the emphasis do vary. In mediaeval times education was vocational. It definitely prepared students for the church and the state. As it broadened it did not attempt to keep pace with the changing world and became largely cultural. Then with rapidly increasing industrial and commercial development came the utilitarian emphasis and the growth of vocational schools and departments. To-day it is felt that the schools are not failing to enrich the life of the individual nor failing to provide such training as will make him efficient in his chosen occupation, but that if the schools fail at all it is by neglecting the training of the young people to fit into the life of the community.

The subjects selected to form the common core should have a direct bearing on these three phases of education. Obviously, the first and most important subject is English. It is doubtful if any secondary schools in the province are spending sufficient time on the study of English. Within the limits of this subject should be found not merely the interpretation and appreciation of literature and oral and written expression, but many phases which are now either relegated to the fringe of the subject or neglected altogether. Among these are the use of the reference library (the formation of the dictionary habit), dramatic presentation, the correlation of English with history, art, etc.

After English should come history, with studies in civics and citizenship. A well-balanced menu should also make provision for geography, science, mathematics, art and music. With such a core of subjects, taken not successively but concurrently for four or five years, the graduate of a secondary school should be an acceptable entrant into any of the more advanced educational institutions. In selecting those to be admitted to a university, information as to the age, natural ability, past achievements, habits of work, of the candidate can be obtained from his school records. Naturally the university will select those who have had, in addition to the core of subjects, training in at least one foreign language and advanced courses in one or more of the subjects of the common core. These are being provided for prospective college entrants in both academic and vocational high schools. But the aim of the schools should be to give a good general education. In brief, the courses taken in any state system of schools should have regard primarily to the 90 per cent. of pupils whose education, in so far as it is obtained in the schools, ends with high school graduation.

Strange as it may seem to us, the universities did not always give leadership in everything that goes to make up a civilized state. As late as the eighteenth century those ancient institutions of learning failed signally in adapting themselves to changing social conditions. In France in particular, and to a lesser extent in England and Germany, the universities showed no interest in new philosophies, new facts and theories in natural science, new ideas in mathematics. In France it needed the jar of the revolution and the edict of 1795, which temporarily shut the doors of all colleges and professional schools in the republic, to shake these moribund institutions out of their state of coma. It is interesting to note that it was the lycées and not the universities that started new things in education in France. Even in Ontario to-day, the academic and the vocational schools, particularly the latter, are causing some college professors to think about education in a new way. The schools no less than the universities have their own peculiar contribution to make to the intellectual life of the Province. It may be, indeed, that the university has something to learn from the high school.

The university is no longer solely a group of scholars sharpening their wits on one another, carrying on research work, "yearning in desire

> To follow knowledge like a sinking star,
> Beyond the utmost bound of human thought."

It has taken on a teaching job. And so it is not unreasonable that all the members of the teaching faculty should have both some training and experience in the art of teaching before undertaking this work. This does not mean that college instruction should make things easy for the student. But it does mean that a good deal of the time and energy of the student now lost in floundering about would be saved. Every college graduate in thinking back over his student days can select the men who gave him the most stimulating and wisest direction, and almost invariably these men were trained teachers. Occasionally, a young graduate is found whose thinking is so straight and whose knowledge of his own mental processes so clear and definite that he may safely be attached to the staff on the completion of his academic courses. But this type of born teacher is not found every day. In placing greater stress on the teaching ability and training of the members of its faculty, the university might very well follow the example of the schools. In a national system of education the secondary school has various functions. More intelligent use of its function as a preparatory school can be made by the university. But on the basis of extent of influence on the state this is not its most important function.

G. F. Rogers,
Chief Director of Education.

Toronto, January 31st, 1933.

APPENDIX B

REPORT OF THE CHIEF INSPECTOR OF PUBLIC AND SEPARATE SCHOOLS

Changes in the Provincial Inspectoral Staff, 1932:—

I. By Death:

J. B. Dandeno, M.A., Ph.D., late Departmental Inspector of Elementary Agricultural Classes for the Province of Ontario, passed away at his home in Toronto, March 15th, 1932. Dr. Dandeno was a native of the city of Guelph, where he received his elementary and secondary school education. He was a graduate of Queen's University, receiving the degree of Master of Arts which enabled him to qualify for a High School Specialist's certificate in Science. His post-graduate studies were taken in Harvard University from which he graduated with the degree of Doctor of Philosophy.

Dr. Dandeno had a long and very successful career as a teacher of Science and Agriculture. He was assistant in the Newburgh High School for seven and one-half years and in the St. Louis High School (Missouri) for one year, a professor in the Michigan Agricultural College for eight years, and the principal of the Bowmanville High School for five years. It was from this latter position that he became Inspector of Agricultural Classes on September 15th, 1915.

Dr. Dandeno loved his work and devoted himself most zealously to it. As a result of his efforts the teaching of Agriculture was extended to every part of the province and improved methods of teaching the subject were adopted generally.

Dr. William Tytler was taken by death on September 13th, 1932, in his 91st year. He had retired as Public School Inspector for the city of Guelph on August 31st, 1929. It is impossible in a short space to do justice to the career of a man who for a period of 66 years was prominent as a teacher, as an inspector and as an educationist. Dr. Tytler was born in Nichol township, Wellington County, in 1842; received his early education in the Elora Grammar School; and graduated from the University of Toronto in 1862 winning the Governor-General's gold medal in Science. His teaching experience included principalships of the Carleton Place High School, the Smith's Falls High School, the St. Mary's Collegiate Institute and the Guelph Collegiate Institute. In 1892 he became Public School Inspector for the city of Guelph and retained that office until his retirement in 1929. In 1924 he was honoured with the degree of LL.D. by the University of Toronto. The cause of elementary and secondary education, not only in the local centres where he gave service but also throughout the province, has benefited greatly from the contributions made by Dr. Tytler. His name will be remembered as one of Ontario's leaders in elementary and secondary education.

II. Resignations:

1. Mr. T. A. Craig retired as Public School Inspector on December 31st, 1932. He had received his appointment as Public School Inspector for Grenville

County in 1891. Mr. Craig was a native of Carleton County and received his early education in the North Gower Public School, later attending the Kemptville Grammar School, the St. Catharines Collegiate Institute and the Ottawa Normal School. On completing the Specialists' Course in Natural Science at the University of Toronto, he joined the staff of the Kemptville High School. Altogether, Mr. Craig served as a teacher and inspector for 54 years. It has been given to few teachers and inspectors to gain as high respect and confidence from the people with whom he worked as was won by Mr. Craig. His faithful and efficient service to the rural schools of his inspectorate and to the cause of education in the province has been highly appreciated.

2. Mr. R. A. Paterson, B.A., retired from active duties as a Public School Inspector on February 29th, 1932. He had been appointed to office in Oxford County (South) on February 1st, 1910, by the Oxford County Council. Mr. Paterson received his early education in the public schools of his native county, Oxford, and in the Ingersoll High School. Later, he graduated from the University of Toronto with First Class Honours in Mathematics and Physics. Later still, he became an Honour graduate and medallist of Osgoode Hall. Mr. Paterson had experience as a teacher in the public schools of Oxford County and in the high schools of Gananoque, Whitby, Strathroy, Ingersoll, Woodstock and Simcoe, and for seven years he was principal of the Perth Collegiate Institute. The public schools of Oxford County (South) made splendid progress under the capable leadership of Mr. Paterson.

3. Mr. E. J. Corkill, B.A., Napanee, was appointed by the County Council as Public School Inspector of Lennox County in 1917, and retired from these duties on December 31st, 1932. Mr. Corkill was a native of the County of Frontenac, where he received his public school education. He later attended the Sydenham High School and the Kingston Model School. His first experience as a teacher was in a rural community. He subsequently attended Queen's University, obtained a Specialist's certificate in Science, and taught successfully in the Collegiate Institutes of Sarnia and Napanee. As an Inspector, Mr. Corkill was devoted to his work and as a result of his progressive leadership and direction the schools under his supervision advanced in every respect.

III. APPOINTMENTS:

The following were appointed to the staff of Inspectors during 1932:—

1. Norman R. Wightman, B.A., Principal, Central Public School, Timmins, to District Division VIII Manitoulin Island and Algoma, South, (in part) to succeed James W. Hagan, M.A. His duties began on March 1st, 1932.

2. Gordon Young, B.A., Principal, Norwich High School, to the County of Grenville, to succeed Mr. T. A. Craig. His duties began on January 1st, 1933.

3. Albert F. Brown, B.A., a member of the Oshawa Collegiate Institute staff, to succeed Mr. George E. Pentland, M.A., Haliburton County. His duties began on January 1st, 1933.

4. Joseph Lapensee, B.A, Principal, Embrun Training School, to Roman Catholic Separate Inspectorate Division XXI, to succeed Mr. L. Charbonneau, M.A. His duties began on November 1st, 1932.

5. A. W. R. Doan, M.A., D.Paed., Principal of the Charles G. Fraser Public School, Toronto, appointed by the Toronto Board of Education to its Public School inspectoral staff. His duties began on January 1st, 1933.

IV. TRANSFERS:

1. J. W. Hagan, M.A., was transferred from District Division VIII Manitoulin Island and Algoma South (in part) to Oxford County (South) and Norfolk County (in part) to succeed Mr. R. A. Paterson, B.A. The transfer dated from March 1st, 1932.

2. Mr. M. R. Reid, M.A., was transferred from Frontenac (North) and Addington to Lennox County, with residence at Napanee, to succeed Mr. E. J. Corkill, B.A. The transfer dated from January 1st, 1933.

3. Mr. George E. Pentland, M.A., was transferred from District Division XVI Haliburton, Muskoka (in part) and town of Huntsville to Frontenac (North) and Addington, to succeed Mr. M. R. Reid, M.A. The transfer dated from January 1st, 1933.

V. OTHER CHANGES:

On June 14th, 1932. the Department of Education made an amendment to the Regulations so as to permit a Board of Education in a city of 100,000 population or more to appoint a Superintendent of Schools with duties subject to the approval of the Minister and with jurisdiction over all elementary and secondary schools under the Board.

On September 1st, 1932, the Hamilton Board of Education, the first board to take advantage of this amendment, appointed Mr. F. E. Perney, B.A., B.Paed., Chief Inspector of Public Schools for the city, as Superintendent of Schools for the city. Mr. Perney continues to hold office as Chief Inspector of Public Schools.

On November 17th, 1932, the Toronto Board of Education appointed C. C. Goldring, B.A., D.Paed., of the public school inspectoral staff, as Superintendent of Schools for the City. He began his new duties on December 1st, 1932.

General

The year 1932 was a more difficult one for the elementary schools than any earlier year in the present century. The slowing down of business activities and the continuous decline in the price of commodities reduced the average of incomes throughout the province very materially. This circumstance was reflected in the cutting of expenditures for school purposes, especially in the rural communities. Building programmes were suspended; only repair work which was absolutely necessary was undertaken, and close attention was given to the reduction of maintenance costs. The system of legislative grants to public and separate schools, adopted in 1931, rendered special assistance to those sections where the need was most urgent, and all schools were enabled to carry on.

It is almost the unanimous opinion of the Public and Separate School Inspectors, as expressed in their annual reports, that during the year 1932 the efficiency of the schools did not suffer. The work in the classrooms on the part of both teachers and pupils was conducted with the same interest, the same zeal and the same conscientious effort that were characteristic of the school work in former years. Boards of rural trustees took advantage of the liberal grants for instructional equipment by providing substantial additions to their school libraries. As these books were selected so that every grade of pupil was recognized, a wider interest in informative reading was stimulated.

The energy, the able direction and close supervision given to the work of the elementary schools by the inspectors were important factors in assisting these schools to serve well the needs of the various communities.

Course for Newly Appointed Inspectors

During the fall term, September to December, 1932, a course for newly appointed inspectors was given by the Ontario College of Education. This course consisted of the following:—

1. A reading course to include the subjects,—(i) Statistics; (ii) Educational Measurements; (iii) New Type Tests and Examinations; (iv) Intelligence Tests and Scales; (v) Achievement Tests; (vi) The Unadjusted Child; (vii) Educational Problems.
2. A course of lectures on (i) Science of Education and the methodology of elementary school subjects; (ii) School Administration.
3. Observational work in the schools in which Normal School students do their observational work and practice teaching.
4. Visits with experienced inspectors while the latter were performing their official duties.

On September 1st, 1932, Mr. A. F. Brown and Mr. Gordon Young each received an appointment as a public school inspector. During the school term, September to December, 1932, they took the above course for inspectors, and in their reports summarizing the work done they speak enthusiastically of the value of this course. It is hoped that those who receive appointments as public or separate school inspectors in the future will be privileged to take a similar course before entering upon their official duties.

A Larger Unit of Administration in Rural Areas

During the present period of extremely low prices for farm products, rural ratepayers have been finding high taxation really burdensome. As a result of this condition drastic reductions in the salaries of rural teachers took place in September, 1932, and during the year rural boards spent little on capital account. In 1932 a survey was made through the public and separate school inspectors to ascertain the number of rural schools with small enrolments which might be closed and suitable arrangements made for the tuition of the pupils in other schools. It was found that 199 schools might be closed. At the present time the closing of these schools would effect a saving of thousands of dollars to the Government in legislative grants, and a much larger sum to the local ratepayers in lower township and school section levies.

Section 86 of The Public Schools Act makes provision whereby one rural board of trustees can arrange with another rural or urban board for the tuition of the pupils. The arrangement may be for a temporary period without the necessity of a change in the boundaries of the school sections or in the location of school buildings.

At the last session of the Legislature, 1932, section 15 of The Public Schools Act was amended so as to enable any township council, by the passing of a by-law, to set aside any portion of the township as a township school area. Such an area may be composed of a number of school sections having a natural community centre. Provision is made for the election of a board of trustees of five members to administer all the schools of the area.

Under this latter scheme the school buildings would remain where they are for the present, but the board would be able to establish at or near the centre of the area Fifth form work or probably a Continuation School to serve the school needs of the whole area with respect to secondary education, and thus reduce greatly the present county rates for the support of secondary schools in urban centres. The board for the township school area would be able also to effect economies by closing temporarily or permanently schools which would be found unnecessary, by purchasing school equipment in larger quantities at lower rates of cost, and in some cases by a more suitable placing of school buildings to be erected in the future

There is no doubt that during recent years an increasing number of rural people have come to realize that we have outgrown the school section form of rural school administration. The people have recently been provided with the necessary legal machinery to alter the traditional system in favour of larger units. A few changes are already taking place in this direction and the movement will be more rapid when the rural people more fully appreciate both the economic and educational benefits to be derived from a larger unit.

Fifth Classes

Fifth classes are those classes of a public or separate school in which courses of study similar to those given in the lower school of the secondary schools are offered. These classes have been established, for the most part, in sections where no secondary school is accessible. They have been organized also in a few of the cities of the province; for example, the city of Toronto has 20 fifth classes, 18 being in public schools and 2 being in separate schools.

In the calendar year 1931 there were 1,316 fifth classes in the province. In the calendar year 1932 there were 1,504 of these classes. With a few exceptions the fifth classes included in this increase were those organized in the one-roomed rural schools.

Fifth classes have a very wide distribution in the province. In the year 1932 they were operating in 67 out of the 75 county inspectorates, in 15 out of the 16 district inspectorates, and in every separate school inspectorate. In the 67 county inspectorates there was an average of 14 to each. The inspectorate of North Grey and Bruce (in part) had no fewer than 37 fifth classes; the inspectorate of Dufferin and Peel (in part) had 36; and 5 other county inspectorates had 30 or more. In District Inspectorate XV (Muskoka in part) there were 45 fifth classes, and in District Inspectorate VIII (Manitoulin Island and Algoma South (in part) there were 43. There was an average of 29 fifth classes to each district inspectorate.

Pupils from fifth classes which have been approved by the local school inspectors are qualified to become candidates for the lower school examination. In the year 1932, 5,328 pupils who were prepared in fifth classes were candidates for lower school standing. They obtained at least a credit on 17,177 papers out of a possible 20,761 papers. This means that they were successful on over 82 per cent. of the papers upon which they desired standing.

The special legislative grants made to fifth classes in 1932 amounted to $57,339.00, an increase of $1,714.00 over 1931. Ten years ago, 1921-22, the special grant to these classes paid on the same bases, was only $16,040.00.

The fact that the increase in the number of fifth classes in 1932 includes, with a few exceptions, only the fifth classes which were established in one-roomed rural schools, shows how important the fifth class is becoming in rural communities. Pupils who would not be able to secure an education beyond that given in form IV of a public or separate school are, by means of fifth classes, obtaining two years of instruction in the lower school courses. Wherever these classes are being conducted under conditions which are at all favourable, the concensus of opinion of the Departmental Inspectors is that excellent work is being done. At the present time fifth classes are felt to be a real need in many communities.

The High School Entrance Examination

The scheme of admission to the lower school of a secondary school on the recommendation of the elementary school principal has had a much wider application in the past year than in previous years. In 1931, the scheme was used in approximately 75 per cent. of the inspectorates. In 1932, it was used to some extent in more than 90 per cent. of them. It is hoped and expected that a still wider application of the scheme will be made in the current year.

The percentage which the number of candidates who passed the high school entrance examination in 1932 bore to the total number of pupils enrolled in forms I to IV inclusive of the elementary schools, varied in the different inspectorates from 2.66 to 11.73, while the average for the province was approximately 7.5.

Interchange of Teachers Within the British Empire

The interchange between home and overseas teachers was initiated in 1907, but was interrupted by the war. Between 1918 and 1922 many exchanges were arranged. Since then these interchanges have been based upon a plan agreed to at the Imperial Education Conference held in London, England, 1923. By this plan teachers during the year of exchange retain their own salary, and they are given the same credit educationally for their year of overseas experience as if the time had been spent in their home schools.

During the current school year, 1932-1933, there are 16 Ontario teachers on exchange with British teachers, and 14 Ontario teachers on exchange with teachers in other provinces of Canada. Of the 30 teachers mentioned, 27 are public school teachers, 1 a separate school teacher, and 2 are secondary school teachers. For the benefit of the overseas teachers on exchange in the old land, the League of Empire organizes week-end visits to places of historical interest as well as more extensive tours on the Continent during the Christmas and Easter vacations. Teachers are loud in their praise of the admirable arrangements made for these trips, and they greatly appreciate the pleasure derived as well as the educational benefits received. Above all, the exchange teachers emphasize the educational value of the exchange both to teachers from the home land going to posts overseas, and to the overseas teachers in Britain.

The fact that 14 Ontario teachers are on exchange this school year with teachers in other provinces of Canada indicates that the plan of inter-provincial exchange is rapidly becoming quite popular. There are four exchanges with teachers from British Columbia, five with teachers from Alberta, three with teachers from Saskatchewan and two with teachers from Nova Scotia.

The Railway School Car

The five school cars operating on the Canadian National and the Canadian Pacific Railways are performing a varied and valuable service. The progress made by the pupils is worthy of note. The system calls for individual effort in a large way in home and school studies and has produced striking results in the way of rapid advance. Six years ago groups of pupils started, at ages ranging from five to seventeen, with no previous schooling and little, if any, knowledge of English. To-day each of thirty-six groups presents a full school unit from primer to fourth book class or beyond. Five pupils have passed the high school entrance examination, and two, in advance of these, have led their classes of over 100 students in Ottawa University and in the Port Arthur Technical School respectively. Thus the school car system is imparting powers of initiative and leadership.

The parents are profiting equally with the children. They have the advantage of reading matter in adult libraries and current literature, of radio and gramophone, and of special studies in English and other basic subjects. Through evening classes they have acquired a new proficiency in their occupational tasks as well as a knowledge of Canadian ideals and the practice of good citizenship. As a result, few remain outside the circle of naturalized subjects and they take a genuine pride in their new-found relationship.

The teachers are especially to be commended for their fidelity to a difficult round of duties, their skill in teaching and their self-denial in community service, all of which have accounted for the success of the enterprise and the grateful response of the isolated peoples whom they serve.

Correspondence Courses

The correspondence courses, covering the public school course of study from the beginning to the high school entrance examination, were established by the Department of Education seven years ago to provide a means of education for children in isolated homes, chiefly in Northern Ontario. These are the homes of pioneer settlers, situated so far from any school that the children cannot attend, and where it is impossible for the present to build schools. These correspondence courses have been very successful, and are much appreciated by those who are making use of them. Since they were put in operation, 2,500 pupils have been enrolled. Persons of school age who are physically unable to attend school, but who are mentally capable, and for whom no other means of education can be provided, may also be admitted to the correspondence courses as special cases. The lessons are based on the authorized text books used in the schools, and are provided entirely free of cost to the pupils enrolled. The answers to the lessons are returned by the pupils to the Department for correction. These answers are examined by a competent staff of teachers, and are sent back to the pupils with the necessary corrections and explanations. It is believed that the correspondence courses will prove a great educational blessing, particularly to pioneer settlers in sparsely settled districts in the northern parts of the province, until such time as conditions make it possible to provide schools. In all the grades from primer to senior fourth the pupils seem to make just as good progress as they would in well conducted schools.

Certain conditions have contributed to an increase in the enrolment for correspondence courses. In some cases, transportation allowances for pupils who are at a considerable distance from school were discontinued, and the Back-to-the-Land movement for the unemployed also placed quite a number of families in localities where there were no schools. The educational needs of the children in these cases had to be taken care of by the correspondence courses, hence the increase in the enrolment. The number taking the courses during the year was over 1,200.

Summer Courses

About twenty-three years ago summer courses were begun by the Department of Education. The purpose of these courses is to enable teachers to occupy their positions throughout the school year, and spend part of their summer holidays in improving their qualifications, either by obtaining special certificates qualifying them to teach more efficiently certain subjects of the school courses, or by obtaining the academic qualifications for a higher grade of professional certificate. When first established, these courses were limited in number to three or four subjects such as agriculture, art and physical training; but gradually this number increased until in 1931 they included branches of study of the elementary and secondary schools as follows:—academic courses in agriculture, art, commercial subjects, household science, manual training, upper school subjects, and vocal music; refresher courses in English, history and science; professional and training courses in technical school subjects, vocational guidance, physical training, for kindergarten primary teachers, for school librarians, for school nurses, and for teachers of French. Not only has the number of summer courses increased, but the centres at which these courses are given have been greatly increased so as to make it convenient for teachers in all parts of the province to attend.

At first, as an inducement for teachers to attend, the Department paid their travelling expenses and part of their living expenses while in attendance. As the teachers began more fully to appreciate the courses, and the attendance was rapidly increasing, the plan of payment of expenses was discontinued. Notwithstanding this fact the attendance has been constantly increasing, and in 1931 the enrolment was 4,637. In 1932, owing to the depression, the number of summer courses was considerably reduced, but it is expected that in 1933 the usual number will again be offered.

School Health

That there is a relationship between the adoption of sound health practices and improved health, has been realized by all health and educational authorities for some time. The question of an equable division of the responsibility for ensuring the early establishment of these practices has been earnestly discussed by representatives of both groups, in many places. The fact that children are in the hands of the school teacher at an impressionable age, and that teachers are already, or can be readily informed as to the health needs of the children under their care, would seem to make for the assumption by those in charge of the conduct of primary schools of the responsibility for setting up a well-considered health teaching programme.

For some two years, the Provincial Department of Health, with guidance from the Department of Education, has been conducting a careful enquiry into various suggested methods of presenting this subject. This investigation culminated in the appointment of a joint Committee of representatives of both Departments for the purpose of reviewing the findings of the original study group. The report of the Committee will be awaited with interest.

The Department of Education will offer at midsummer, 1933, for the first time, a summer course in Health Teaching. The course will emphasize the importance of teaching good health habits to the pupils and will be open to all teachers in elementary schools.

Rural School Fairs

In May, 1932, the Inspectors were asked to co-operate more closely with the District Agricultural Representatives in the management of school fairs. The response was whole-hearted and immediate. According to the plan of co-operation, the Agricultural Representative and the Inspector are to meet early in the spring term and, in a general way, arrange the programme for the fairs. After the fairs have been held, the Inspector and the Agricultural Representative are again to meet in conference to discuss ways and means of improving the fairs. The Agricultural Representatives are responsible for the clerical work, instructions to exhibitors, arrangement of exhibits, management of the programme and the judging in all competitions except those closely related to academic work. The Inspectors are to assist with the management of the fairs and are responsible for the judging of such competitions as public speaking, Strathcona exercises, spelling, map drawing and manual arts. Notwithstanding the earnest efforts of the Agricultural Representative, the Inspector and committees, the success of the school fairs is in no small measure due to the interest of the teachers in the subject of agriculture, the inspiration they give to it in the school and the splendid way in which the pupils respond.

The following are excerpts from reports made by the Inspectors, referring to the value and success of the school fairs:—

"The Agricultural Representatives are to be congratulated on the success of their efforts."

"The public speaking of the children was exceptionally good and most of the speakers were able, in their impromptu addresses, to maintain the high standard set in their prepared speech."

"The school fairs afford the best opportunity of the year for the parents to get in touch with several phases of school work."

"The grade of the livestock and poultry shown was of the best, and the grain, vegetables and flowers made excellent showings in their classes."

"They were the means of bringing me in personal contact with a large number of parents, ratepayers and trustees, and I feel that these contacts will be of great assistance in my work."

"One collection had 192 wild flowers, most of them correctly named. At each fair there was a good showing of needlework and cooking done by the girls. In manual training there was much fine work done on the building of bird houses, model hay racks, model sail boats, etc."

"The competition between pupils and schools is keen, but the pupils acquire a good spirit of sportsmanship."

"I attended all the fairs, judged the school exhibits such as work-books, art, map drawing and the public speaking and recitation contests. I also took the opportunity to discuss school questions with many of the trustees."

General Remarks

Many private individuals and organizations continued to give friendly support and material help to the elementary schools during the year 1932. Boards of trustees everywhere manifested a determination to give as complete support to the schools as the local purse would permit; and communities, urban and rural, sacrificed in order that the schools might continue without loss of efficiency.

I am indebted to my colleague, Mr. J. D. Campbell, B.A., Assistant Chief Inspector, for his hearty co-operation and assistance, to Dr. J. B. MacDougall and Mr. Neil McDougall of this Department, and to Dr. J. T. Phair of the Department of Health for their contributions, relating to their respective departments, contained in this report.

V. K. Greer,
Chief Inspector of Public and Separate Schools.

Toronto, February 15th, 1933.

APPENDIX C

REPORT OF THE HIGH SCHOOL INSPECTORS

The industrial and economic depression of the past year has brought unprecedented difficulties to almost every phase of human life. As might be expected, conditions resulting from it were reflected generally in the work of education, but more particularly in so far as secondary schools were concerned. The deepening of interest in higher education, subsequent to the period of the Great War, placed upon every community a comparatively heavy burden of responsibility in the matter of providing suitable accommodations, either by erecting new buildings or by making over old ones. These increased facilities, however, proved, in most cases, to be commensurate only with the growing needs of the community so that there was little provision made, especially in the large centres of population, for a period of enforced cessation from building. During the year under review, the only important additions to accommodations were made at Humberside and Oakwood Collegiate Institutes in Toronto, and at Earl Haig Collegiate Institute in York County. Minor changes were made in the following schools: Dundalk, Harriston, Ingersoll, Simcoe and Penetanguishene. To avoid the necessity of increased capital expenditure, the Board of Education at London adopted, in connection with the Central Collegiate Institute, a "staggered" system of class organization—an experiment which is being watched with a great deal of interest.

As a result of conditions to which reference has been made and of the great increase (on account of lack of employment) in the number of young people attending the Middle and Upper Schools, there were many cases of serious overcrowding. This was further emphasized by the inability of Boards to employ additional teachers even when class-rooms might have been available by rotating classes and thereby utilizing constantly every room, including the laboratories, or by the use of "portables." Had this overcrowding been confined only to the senior grades, where the pupils have learned, more or less, to do for themselves, it would not have been so serious. Frequently, however, to meet the exigencies of organization, it was necessary to form very large classes in the first and second years. To those who are conversant with school work, the evil of this will be apparent; for in these years the pupils are beginning a number of new studies and require much individual help as well as frequent opportunities to give oral expression to their ideas. That the work was carried on with a reasonable degree of efficiency is a fine tribute to the spirit of co-operation which was apparent in most of the classes and found further expression in greater attention to home-study.

The success of the year's work was no doubt due, to some extent, to the new Regulations whereby pupils who, during the year, have attained a certain standard of efficiency (at least 66%) on one or more of the Middle School papers may, on the recommendation of the teacher, be granted standing on these papers without further examination. More or less unconsciously, the knowledge that this was possible had a stimulating effect upon the work of the pupils, especially in the examination forms. As the scheme was regarded as more or less tentative, teachers were, for the most part, very careful to adhere to the spirit (if not to the very letter) of the Regulations; and this was the factor that contributed most to the success of the experiment and made possible its continuance. Indeed, the effect of these regulations is now apparent not only in the classes of the Middle School, but in those of the Lower School as well. The pupils of these classes are realizing, as perhaps never before, the need for laying a good foundation in the various studies; for upon their ability to build thereon will depend the possibility of being freed from Departmental examinations in the Middle School.

The method of General Inspection for large schools, which was introduced into Ontario more than a year ago, was continued during the past year. Under this plan five large Collegiate Institutes were visited by the staff of High School Inspectors, each inspecting the work of the departments in which he was specially interested. During the period of inspection, as well as at the close of it, methods of teaching and difficulties incidental to the regular work were discussed with the teachers either individually or in groups. In addition to this, a number of the smaller Collegiates and some of the large High Schools were visited by two (or occasionally three) Inspectors; in this way it was possible to make a more thorough inspection of the work and to give more help to the teachers than one Inspector could have done.

Generally speaking, the organization and administration of the schools are satisfactory. The present course of studies has been in operation for about ten years, and its possibilities have been carefully evaluated in the schools with the result that the order in which the subjects are studied, as well as the allotment of time to them, is, as a rule, designed to achieve the best results from the point of view of both training and culture and does not vary to any great extent in the different schools.

A commendable feature of the organization of many schools is the generous provision made for the teaching of English, particularly in the lower grades. More and more teachers are realizing that perhaps the most important permanent result of the training received by the pupils will be their interest in good literature. In developing this interest, the Library is playing a more important part every year. In many schools it is housed in a commodious room, well lighted, tastefully decorated, hung with beautiful pictures, and provided with suitable book-cases or shelves. The value of the unconscious education received by the pupils as they meet in this room, from time to time for library instruction or for study cannot be overestimated. Sometimes the room is in charge of a trained librarian who is likewise qualified as a teacher; but more frequently one of the teachers of English (who may or may not have had some experience in library work) is given charge of it and is entrusted with the responsibility of devising ways and means of stimulating the interest of the classes in the well-selected books that are found there.

While commodious and well-appointed buildings, as well as a good organization of the work, are desirable, the most important factor in the life of any school is the staff of teachers, the power of their personality, and their ability to impart instruction. At present there is an adequate supply of qualified teachers for every department of study. This is due in part to the present depression and to the return of former teachers to the profession; but even more is it due to the zeal that teachers who are making teaching their life-work have shown in seeking higher qualifications both professional and non-professional. Some who are without university standing have been working to secure it; others who are graduates in the general course of a university have been endeavouring to secure specialist standing in some department of study; others again have taken advantage of the "refresher" courses offered by the universities or by the Department of Education during the summer; while many have sought instruction and some contact with old-world culture by means of study and travel in foreign countries. Much value may well be attached to these means of self-improvement; for to the teachers who are able to take advantage of them, they mean fresh inspiration and a wider outlook upon educational problems; probably, too, an insight into better methods of instruction, and, therefore, greater efficiency in the class-room.

The question of the physical well-being of the pupils in relation to their mental alertness is an important one, and teachers are wisely giving considerable attention to it. In the buildings which were constructed years ago and lack either an auditorium or a gymnasium, or not infrequently both, the problem is somewhat difficult of solution; for in these schools it is not possible to enjoy the benefits to be derived from regular classes in Physical Education, carried on in spacious and well-lighted rooms supplied with an abundance of fresh air. In lieu of this, an effort is made to utilize the class-rooms and the corridors for this purpose, and to adapt the regular course of instruction to conditions of work as they are found in different types of buildings. The work of Physical Education in a few of these schools has been organized with great skill and follows a definite programme of development through the entire school course. The infrequency of these classes (three a week in the Lower School and two a week in the Middle and Upper Schools) makes other forms of relaxation desirable during the sessions of any school day. The morning session is three hours in length; the afternoon session, two hours and a half. In most buildings constructed during the last eight or ten years, it is possible to operate a rotary system of classes, and this, in addition to affording other advantages, provides the much-needed physical exercise at the end of the lesson. In buildings where this is not possible, some relaxation is found in the movement of classes to the laboratory and not infrequently to rooms specially arranged for the teaching of Art and Geography. In a few schools, the long morning session is broken by the opening exercises which are held, at the end of the second period, in the auditorium or in a class-room large enough to accommodate all the pupils. In an occasional school (and this might well be considered by teachers who are working under the handicaps to which reference has been made) two or three minutes are devoted to freehand gymnastics at the beginning of the period. The benefit of such exercises from the point of view of the physical and mental welfare of the pupils requires no elaboration.

It is gratifying to note that in most of the schools the relation between the regular work of the class-room and extra-curricular activities is being carefully evaluated, and enthusiasm for the latter is being used to stimulate and strengthen interest in the former. Leagues, organized in three or four sections of the Province, have been helpful in creating high standards of efficiency in these activities, in fostering a fine sense of honour in inter-school competitions, and in helping to preserve, as in Athletics, a proper balance between the physical and the intellectual by requiring a certain proficiency in the work of the class-room as the first condition of competing in the events controlled by these leagues. Inter-school competitions are also carried on, along much the same lines, by smaller groups of schools.

It would not seem fitting to bring this report to a close without making special reference to the work of the teachers. The traditions of the teaching profession, in Canada as well as in other countries of the world, have been enriched all along the years by the enthusiasm, self-sacrifice and devotion of many gifted men and women. At no time, perhaps, have these qualities of the teacher been put to a sterner test than during the year which has just closed; but it is only fair to state that, generally speaking, the teachers of this Province have answered the challenge of the time in a way that must have merited the approval of the communities in which they reside.

APPENDIX D

REPORT OF THE INSPECTORS OF CONTINUATION SCHOOLS

Schools in Operation

There are 219 Continuation Schools in the Province of Ontario. These may be classified as follows:

Grade "C"	Schools having one teacher	13
Grade "C"	Schools having the full time of one teacher and at least half the time of a second teacher	22
Grade "B"	Schools having the full time of at least two teachers	132
Grade "A"	Schools having the full time of at least three teachers	52

Among the Grade "A" schools are six four-teacher schools, three five-teacher schools and one seven-teacher school. One Grade "C" one-teacher school reverted to a fifth class on September 1st and one five-teacher school has become a High School, beginning with 1933.

Teachers

In the 219 Continuation Schools there are 493 teachers, which is an increase of three over the previous year. Of these 169 or 34.28 per cent. are men and 324 or 65.72 per cent. are women. Among these teachers 124 or 25.15 per cent. are graduates of some university. It is gratifying to note a steady increase in the number of graduates in the Continuation Schools—from 11.65 per cent. in 1929 to 25.15 per cent. in 1932. The increase is due to the greater number of university graduates who have turned to teaching owing to present conditions, as other positions more congenial or more remunerative are not available.

There is at present, and no doubt will be in future, a sufficient supply of graduates of the College of Education to fill all vacancies in the Continuation Schools. In the past, when the supply of graduates was limited, there was some hesitation on the part of Boards about engaging a graduate. Usually only those graduates who had failed to secure positions in High Schools made application for a vacancy in a Continuation School. Since the salary was lower, the range of subjects much wider and the apportionment of time to each subject smaller in proportion, it was natural for Boards to conclude that if such an applicant had successful High School experience he would remain in a High School, or, if he gave evidence of good ability he would have secured a position in a High School. In either case, if, after some experience, the teacher developed some ability he was sure to leave at the earliest opportunity for a position in a High School. But conditions have changed in recent years and owing to the number of available graduates it is now quite possible for Boards to select with confidence from among such applicants. While scholarship is not the only factor that should be considered when engaging a teacher, it is a very important factor. In general, university graduates have not only a better education and training in the subjects to be taught, but they are older, have had a more varied experience, and they should make more efficient teachers. While this is true, we do not reflect on the work of our teachers, of whom almost 75 per cent. hold only First Class certificates, although many of these teachers have also covered one or two years of a university course. The efficiency of the work done by the great majority of these teachers is a continual source of pleasure and satisfaction. Measured by any standard it compares favourably with that done in any grade of secondary school. The smaller classes that permit more intimate contact and closer supervision by the teacher, and the fact that the great majority of the pupils live at home, away from the distractions of town and city life, go far to offset any advantage that may be derived from better qualified teachers.

Present Tendencies

1. In Accommodations and Equipment:

The widespread interest throughout the Province during recent years in the better education of the youth of rural districts and small urban centres, and the provision made by the Legislature for the distribution of the cost among the Province, county, township and school section have, with very few exceptions, resulted in good accommodations and very fair equipment in our Continuation Schools. Owing to present financial conditions, expenditures for improvement of accommodations and additions to equipment have been greatly reduced. One new school was completed at Lion's Head and a new building is in process of erection at Fenelon Falls.

2. In Attendance:

Attendance has increased considerably during the past two years. Many young people who find it impossible to secure profitable employment elsewhere are attending school, most of them with a view of a better preparation for the work of life, but a few to put in the time until some sort of employment offers. As a result a number of our schools are overcrowded, and because of lack of an extra class-room and the cost of an additional teacher the staff is struggling along, trying to give the best service possible under the conditions.

3. In Course of Study:

In the courses of study offered in these schools two tendencies in the attitude of School Boards and parents are noticeable. The first is an increasing interest in the teaching of Agriculture as a substitute for the usual Science subjects, and the second a growing desire to include Upper School work as a part of the school course.

In regard to the first, the greatest factor operating against the introduction of Agriculture on the school course is the lack of a sufficient number of suitable teachers holding proper qualifications. Too frequently this course is established, the necessary equipment provided, and at the end of a year or two the teacher leaves for what he believes to be a better position, or to attend the university. The Board too frequently finds it difficult to secure a suitable successor and the course is dropped.

Schools with a staff of only two teachers are not permitted to undertake any Upper School work. Where the staff consists of three teachers the school may, with the approval of the Minister, add the work of three Upper School subjects to the Lower and Middle School subjects already established. Since the Middle School course gives Entrance to Normal School for a Second Class certificate only, and since the holder of a Second Class certificate, when applying for a position, must compete with a large number of teachers holding First Class certificates, her chance of success in obtaining an appointment is small. As a result of this, and also of the fact that more pupils pass the Middle School examinations at an earlier age than formerly, a number of School Boards and many parents are desirous of extending the work of the school to include some of the subjects of the Upper School course and to alternate the subjects so that it may be possible to secure Upper School standing at the local school. To do this successfully will necessitate the addition of a third teacher to the staff and the employment of university graduates in such schools. Present conditions are not favourable to any movement that would necessitate additional expense but progress in the Continuation Schools in the near future would seem to lie along these lines.

The service the Continuation Schools have given to the youth of rural districts is so clearly recognized by parents that although many are finding great difficulty in meeting necessary expenses there is no desire apparent on the part of ratepayers to discontinue their schools. The advantage of having such a school within reach of their homes is so much appreciated that, although severe reductions of salaries may be found necessary, ratepayers will continue to support these schools to the limit of their ability.

J. P. HOAG,
S. D. RENDALL,
Continuation School Inspectors.

Toronto, 31st December, 1932.

APPENDIX E

REPORT ON THE SCHOOLS ATTENDED BY FRENCH-SPEAKING PUPILS, 1932-1933

Since the adoption in 1927 of the Report of the Committee of Inquiry which was appointed to investigate the schools attended by French-speaking pupils, a systematic and continuous effort has been made to improve the quality of the training given in these schools. In accordance with the recommendations of that report, the Department of Education has sought to secure this improvement through two main avenues: (1) by securing more highly qualified teachers through the provision of better facilities for advancing their academic and professional attainments; and (2) through more careful supervision of the actual work in the schools by departmental officers.

(1) Teacher Supply

That the first of these plans is meeting with reasonable success may be inferred from the following table showing the professional certificates held by the teachers of the schools during the period of the investigation (1925-27) and during the school year 1932-33.

Percentage of Teachers Holding Various Grades of Certificates

	First Class	Second Class	Third Class	Temporary	No Valid Certificate
1926-27	1.06	12.44	33.53	9.25	43.72
1932-33	8.45	33.76	38.03	18.20	1.56

It will be noted that the percentage of teachers with the higher grade certificates, the First and Second Class, has more than trebled within six years, and that the percentage with no valid certificates, which in 1927 approached nearly half the total, is now almost negligible. At the present time, over 42 per cent. of the teachers hold the two higher certificates. At present more than 80 per cent. of the teachers have had a year's training in the Model or Normal schools; in 1927 only 46 per cent. had had this training. The small group of teachers now holding temporary certificates have had some professional training and have partial, and in many cases nearly complete, standing for entrance into the University of Ottawa Normal School; in 1927, the teachers holding temporary certificates had neither the academic nor the professional standing required for this type of certificate to-day. It is evident, therefore, that a substantial advance has been made in the standard of academic and professional qualifications of the teachers at present in charge of the schools. To this advance are due, in large measure, the results which are set forth later in this report and which were predicted by the Committee of Inquiry in 1927.

The chief agencies through which the improvement in the teachers' qualifications has been obtained are the summer schools and the training schools.

The summer schools, established at four convenient points in the Province and operating for six weeks during July and August each year, have done a great work in affording facilities for teachers with temporary and expired certificates to obtain higher academic standing. Those who accomplish a prescribed minimum of work in preparation for Normal School entrance and pass the Departmental examinations in August are eligible for temporary qualification to teach the following year on the recommendation of an inspector. It is a tribute to the industry and enthusiasm of the teachers that a large percentage accomplish considerably more than the minimum prescribed. During the past five years about 50 per cent. of all the teachers—practically all whose lower grade certificates have expired or who hold only temporary qualifications—have regularly appeared at the summer schools, and many have completed the courses for admission into the Normal School in this way.

The training schools have, of course, performed a more important service in the improvement of the qualifications of teachers. The Department maintains four institutions for the training of teachers for the schools attended by French-speaking pupils. The University of Ottawa Normal School gives professional training for First and Second Class certificates; the Model Schools at Embrun and Sturgeon Falls give instruction in the academic course of the Lower School, and professional training for Third Class certificates; the Model School at Sandwich prepares candidates in the Middle School course for entrance into the University of Ottawa Normal School. All of these schools are well staffed by able and experienced teachers, and are doing efficient work.

The University of Ottawa Normal School has had a phenomenal growth during the five years of its existence, as may be seen from the following table showing the yearly attendance:

Year	First Class	Second Class	Total
1928-29	0	14	14
1929-30	8	37	45
1930-31	15	65	80
1931-32	18	82	100
1932-33	32	165	197

The employment next year of approximately two hundred teachers of First and Second Class standing can scarcely fail to advance the efficiency of the schools. Such an addition will increase by nearly 50 per cent. the number of teachers with the higher certificates of qualification, and, if the present attendance at the Normal School is maintained, we may confidently anticipate an almost complete staff of First and Second Class teachers within three or four years. So encouraging is this prospect that the Department has already announced that it will discontinue the training of teachers for Third Class certificates at the close of the school year in 1935. It is believed that the necessity for low-grade certificates will by that time have disappeared.

We have been impressed by the unusually high standard of ability shown by the student body of the University of Ottawa Normal School this year. While a considerable proportion of the number are fresh from the High Schools, many are fairly mature men and women who have spent some time in teaching and many have had a year's training in a Model School as well. With such a background of experience, they are able to appreciate more fully the materials of the course and to discuss more intelligently the problems of teaching. We have also been impressed by the facility with which the students express themselves in both English and French. So proficient are they in this regard that it would be difficult for the casual observer, who might happen into one of the classes conducted in English, to convince himself that English was not their mother tongue. It is fortunate that it is from students of this type that the schools will largely be staffed in the near future.

The Model Schools at Embrun and Sturgeon Falls have done remarkably good work in the preparation of teachers for lower grade certificates, and, during a period when it was impossible to provide teachers of higher qualification, they have performed an invaluable service for the elementary schools. However, as already stated, the necessity of providing lower grade teachers has now almost passed, and the Department will not continue the professional training in the Model Schools after 1935.

(2) Supervision

The total enrolment for 1932-33 in the schools attended by French-speaking pupils was as follows:

	Rural Schools	Urban Schools	Total
Eastern Ontario	6,298	10,601	16,899
Northern Ontario	8,070	6,483	14,553
Western Ontario (Essex and Kent)	2,013	2,889	4,902
Total	16,381	19,973	36,354

For the supervision of these schools there is a staff of ten Inspectors, who visit each classroom under their supervision at least twice a year. In the course of their inspection they carefully test the attainments of the pupils in the various school subjects, and demonstrate methods of teaching those subjects in which the teacher needs assistance. They give advice and suggestions as to improvement in methods, and, if necessary, leave written directions that the teacher is expected to carry out before the next inspection. Each teacher is made to feel that he has a part in a great co-operative enterprise, the aim of which is to give every French-speaking pupil in the Province a proficiency in the use of English as well as of his mother tongue, and coincidentally to give him the other elements of a good general education. This spirit of co-operation is becoming more and more manifest throughout the whole teaching body, and is one of the most promising features of the general situation in the schools. In proportion as the teachers can be inspired with enthusiasm for the success of the present scheme, the schools may be expected to advance in efficiency.

As departmental officers we have been spending at least two weeks every year with each Inspector, assisting him in the examination of typical schools in his inspectorate, demonstrating methods of lesson procedure, and conferring with teachers as to means of improvement. In this way the Department maintains what might be regarded as a continuous investigation of the schools, and, with the further assistance of regular reports from the inspectors, is not only kept informed regarding the situation, but is also assured that all possible progress is being made. As secretaries of the Committee of Inquiry from 1925 to 1927, we had a first-hand acquaintance with the conditions at that time, and we can state without hesitation that there has been a very considerable improvement in the general situation during the period that has elapsed. In 1927, these schools were, with comparatively few exceptions, very inefficient. It was anticipated that, even in the most favourable circumstances, progress would necessarily be slow and gradual. There has been no sudden and complete transformation from inefficiency to efficiency, but, five years after the adoption of the new scheme of dealing with these schools, it can definitely be said that there is marked progress in the right direction. The indications are that this improvement will be progressive and cumulative, and there is reason to anticipate that five years hence, when the plan will have been in operation for ten years—a period quite short enough to test its effectiveness fairly—the average standing of these schools will closely approach that of the elementary schools in any part of the Province.

Inspections during 1932-33

During the school year 1932-33, in association with the inspectors concerned, we visited 14 urban schools comprising 125 classrooms, and 41 rural schools comprising 56 classrooms—a total of 55 schools and 183 classrooms. These schools may be regarded as typical of the inspectorates in which they are located, and a survey of the conditions in them should therefore give a fairly accurate idea of the general situation in all the schools. We examined the pupils in the various school subjects both orally and in writing, and graded their work in much the same way as the Committee of Inquiry did in 1925-27. The results of our examination and our inferences therefrom will be presented in the remaining part of this report. We have endeavoured, wherever possible, to make comparisons of the results obtained during the year with those obtained by the Committee of Inquiry, as given in the report of six years ago, as a means of estimating the improvement that has been made. It should, however, be pointed out that it is difficult to maintain exactly the same standards to-day as were employed during the investigation. As the schools improve, there is a natural and unavoidable tendency to exact progressively higher standards of work. As a result of this continuous advance in the requirements, it is certain that much of the work of the pupils, regarded as fair in 1927, would be classified as poor in 1933. The figures quoted in the comparative tables given later in this report are, therefore, somewhat unfair to the schools to-day, for our present gradings would doubtless be higher if the exact standards of 1927 were applied. Moreover, it should also be noted that the percentages in the tables refer to schools and not to pupils. Greater improvement has occurred in the urban schools than in the rural schools, but in the tables a small rural school of fifteen or twenty pupils, graded "poor," offsets a large graded school of five hundred pupils, graded "good." If it were possible to grade the work of individual pupils, the percentages of higher gradings would be much greater.

English Reading

The following table shows the percentage of classes examined during the year in which the work in English Reading was satisfactory, as compared with the percentages of satisfactory classes in this subject in 1927.

	Form I	Form II	Form III	Form IV
1926-1927	25	23	25	36
1932-1933	45	44	43	56

It will be noted that there has been a considerable and uniform advance all along the line. Perhaps in no other phase of English instruction has improvement been so marked as in the teaching of Reading in the lower classes. All the pupils begin the reading of English in the second school year, and, having obtained during the first school year some ability to read French and to speak English, their progress is little short of remarkable. The ability of the pupils in the higher classes to read and interpret English of a standard suitable for their grades is also rapidly growing. The teachers are becoming better acquainted with the requirements of the problem and are improving their methods in this phase of the work.

English Conversation and Oral Composition

In the table below, the work in elementary oral English in Forms I and II to-day is compared with similar work in the Forms in 1927. The figures in each case indicate the percentage of the schools in which satisfactory work in this field was done.

	Form I	Form II
1926-1927	36	20
1932-1933	55	49

It is apparent that striking advance has been made in this phase of the work. Oral English is begun at the child's entry into school, and systematic training in conversation and free expression is given throughout his whole school career. Owing to the emphasis placed upon this work by the training school staffs and by the inspectors, practically all the teachers have developed at least a fair technique in this field, and the proficiency in English speech acquired even by first-year pupils in many schools in purely French-speaking communities would be surprising to the uninformed observer.

Written Composition

Naturally the improvement in written composition in Forms III and IV has not altogether kept pace with the improvement in oral expression, and the character of the work in this sphere leaves as yet much to be desired. The ability to write accurately in another language must always be more difficult to acquire than the ability to speak accurately. During the year we required every pupil in the Third and Fourth Forms in the schools we visited to write an English composition, usually a story of suitable length and difficulty told by the examiner. Of 1,125 compositions written by Third Form pupils, 71 were graded excellent, 307 good, 291 fair, 331 poor, 105 very poor, and 20 zero. Of 920 compositions written by Fourth Form pupils, 86 were graded excellent, 267 good, 262 fair, 246 poor, 52 very poor, 7 zero. These numbers are reduced to percentages and compared with similar results in the schools in 1927 in the following table:

Grading	Form III Percentage of Pupils Having the Grading		Form IV Percentage of Pupils Having the Grading	
	1927	1933	1927	1933
Excellent	0	6	2	9
Good	6	27	29	29
Fair	20	26	25	29
Poor	35	30	26	27
Very Poor	22	10	8	5
Zero	17	1	10	1

Third Form pupils show a considerably greater improvement in written work than Fourth Form pupils, a fact probably explained by the better training received by the Third Form pupils while in the lower classes. For it should be noted that the pupils now in the Fourth Forms were in the primary classes before the new scheme recommended by the Committee of Inquiry came into operation, and in most cases did not have the advantage of the thorough training in elementary English that pupils in the lower grades are now receiving. The figures are not, therefore, a true index of the advance made in the general situation.

Ability to Speak English in the Last School Year

The most reliable test of the efficiency of the teaching of oral English is the ability of the pupils in the last school year, that is, in the Senior Fourth class, to speak English fluently and accurately. It was found, in practically all the urban schools visited during the year, that the pupils in the highest class were able to speak English with a fluency and accuracy closely approaching that of English-speaking classes of similar grades. In many of the rural schools this is equally true, but in some of these, particularly in parts of eastern Ontario, the standard in this regard is not yet satisfactory. It is schools of this type that lower the general average of efficiency.

In the following table the schools are classified in four groups according to the ability of the pupils to speak English in the last school year. The figures are the percentages of the schools belonging to each group:

	Percentage	
	1927	1933
(1) Schools in which the pupils speak English satisfactorily, that is, with a facility approximating that of English-speaking pupils of the same grade....................	35	53
(2) Those in which the pupils speak with limited vocabulary and many mistakes..............................	15	29
(3) Those in which the pupils are able to answer easy questions upon the school work but are unable to maintain a continuous conversation or organize their speech in a connected way.................................	15	18
(4) Those in which the pupils have no ability to speak English..	35	0

It will be observed from this table that in 1927, in only about one-third of the schools were the pupils in the last school year able to speak English satisfactorily, while in 1933 the proportion had advanced to more than one-half. But a still more striking evidence of improvement is found in the fact that in 1927 in more than one-third of the schools the pupils in the last year had no ability to speak English, while in 1933 there was not found a single school that could be so designated. Of the schools we inspected during the year, 82 per cent. might be described as fair or good in oral English in the last year, and 18 per cent. as unsatisfactory, while in 1927 only 50 per cent. were fair or good and 50 per cent. were unsatisfactory.

Ability to Write English in the Last School Year

The most reliable measurement of the efficiency of a school in the writing of English is to be found in the ability of the pupils in the last school year, that is, in the Senior Fourth class, to write freely and correctly. As in the grading of the oral English, we have divided the schools into four groups according to the ability of the pupils to write English in the last school year. In the table below the figures represent the percentage of the schools we inspected belonging to each group, as compared with the percentages in each group in 1927.

	Percentage	
	1927	1933
(1) Schools in which pupils write English satisfactorily, that is, with a good vocabulary and few mistakes, and with a facility approximating that in the average school attended by English-speaking children........................	31	40
(2) Those in which pupils write fairly but with limited vocabulary and a considerable number of mistakes.....	25	30
(3) Those in which the pupils are able to write a little but poorly..	34	30
(4) Those in which the pupils cannot write English at all....	10	0

A substantial improvement over 1927 may be noted in the first two groups of schools. In 1927 the written English was fair or good in 56 per cent. of the schools, poor in 34 per cent., and entirely absent in 10 per cent. In 1933, the written English was fair or good in 70 per cent. of the schools visited, poor in 30 per cent., and entirely lacking in none. However, though there has been a marked advance in this department in the ability of the pupils in the last school year, there is still room for considerable improvement

French Reading

The following table shows the percentage of classes examined during the year in which the work in French Reading was satisfactory, as compared with the percentage of satisfactory classes in this subject in 1927:

	Form I	Form II	Form III	Form IV
1927........................	30	25	37	50
1933........................	65	52	57	76

At the time when the Committee of Enquiry visited the schools in 1925-27, it was found that in a very large percentage of the schools the standing of the pupils in French Reading was unsatisfactory. In the junior classes, the pupils were progressing very slowly and the reading was usually lacking in expression. The habit of reading inexpressively formed in the junior classes was often continued in the senior classes, which accounts largely for the comparatively low percentage of satisfactory classes in Form III and Form IV.

Since 1927, the general improvement in French Reading has been very marked. An examination of the preceding table shows that the percentage of satisfactory classes in Forms I and II has more than doubled since 1927. This improvement in the junior classes has raised materially the standard of the reading in the senior classes, where there has been an amelioration of over 50 per cent. in Form III and Form IV classes. Apart from the general advancement in the qualifications of teachers, the following factors account to a large extent for the general improvement of the reading in the schools:

(1) A proper appreciation of the importance of the subject of primary reading by the teachers, the inspectors, and the training schools.

In the majority of the schools, special attention is given to the teaching of French primary reading since it is felt that this is one of the basic subjects on the course of studies for French-speaking pupils. Poor work in French primary reading extends greatly the period of time required by the pupils to master the mechanics of reading and to develop a taste for the subject. Until this stage is reached, the best results in language training cannot be achieved.

(2) The authorization by the Department of a French primer based on modern methods of teaching reading.

Through the use of this primer in the schools, the pupils usually acquire a liking for the subject of reading and form the habit of reading intelligently and expressively. When this habit is formed in the early stages, the teachers have little difficulty in maintaining a high standard in reading when the pupils are promoted to more advanced classes.

(3) The greater use of the school libraries by the pupils.

In 1927 the Department prepared a list of French books suitable for school libraries. Since the publication of this list, many school boards, on the advice of the inspectors, have seen fit to add interesting books to the school libraries. These books have stimulated an interest in reading by the pupils and have undoubtedly helped to improve the standard of reading in the schools.

Written French

The following table shows the percentage of classes examined during the year in which written French was stisfactory as compared with the percentage of satisfactory classes in this subject in 1927:

	Form II	Form III	Form IV
1927	35	9	27
1933	45	40	50

A study of the above table shows that, on the whole, the ability of the pupils to write French correctly in 1927 was far below a desirable standard. More than 90 per cent. of the Form III classes and nearly 75 per cent. of the Form IV classes wrote unsatisfactorily for their grades. Taking the schools examined last year as being fairly typical of the schools of the Province in which French is a subject of instruction, one may note that the percentage of schools where the pupils of Form IV acquire the ability to write French satisfactorily for the grade has almost doubled since 1927. This improvement in the character of the written work of the pupils of Form IV is made possible by the better work which is being done in Form III classes where there has been an advance of from 9 per cent. to 40 per cent. in the standard of the written French.

This remarkable improvement in the standard of the written French is the result of an intensive teaching of French Spelling and Grammar which are being stressed since the Committee of Enquiry made known in their report the fact that the written French was unsatisfactory in a large number of the schools. In order to meet the need of improving the written French in the schools, the Department of Education prepared two spelling books, an elementary text for pupils of Forms I and II, and a more advanced text for pupils of Forms III and IV. The aim of these books is to give to the pupils of the junior grades an informal and practical course in grammar and spelling that will be useful in improving the written speech of the pupils. In grammar, the stress is placed on the inflected parts of speech since it has been found that a very large percentage of the mistakes made by the pupils in writing French consists of errors made in not adding the proper inflections to nouns, adjectives, and verbs when these are used in sentences. In the senior grades, the spelling book is supplemented by a grammar text book.

These books are serving a very useful purpose. In them are outlined definite courses for the various grades and the teachers are making a serious attempt to cover these courses with their pupils. In all the schools, the inspectors take written tests based on the subject matter studied by the pupils and thus give an impetus to the teaching of the subject.

It may safely be inferred that the daily lessons and frequent drills which are now being taken by the teachers must result in a very rapid improvement in the pupils' ability to write French.

Oral French

The improvement noted in the pupils' ability to read and to write French is also evident in their ability to speak the language. While it is true that in the case of a few urban schools the pupils speak French with a limited vocabulary and with many mistakes, we found in most of the schools inspected last year that the teachers were giving the pupils a careful training in oral French and that the Form IV classes usually spoke French with satisfactory facility for the grade.

Arithmetic, History, Geography, and Writing

Improved methods are being generally adopted in the teaching of arithmetic. The subject is being taught in both English and French practically from the first in the majority of the schools. The simplicity of the vocabulary makes this a comparatively simple matter. Much still remains to be done, however, particularly in the rural schools, in the development of rapidity and accuracy in the use of the simple rules.

The teaching of history and geography is generally defective in the rural schools. It is a rare rural school indeed where the pupils have an adequate knowledge of either of these subjects. In many of the graded schools, however, the pupils have a fair grasp of the work. There is a fairly general attempt to teach these subjects in both languages. This practice is, of course, very advantageous from the standpoint of improving the pupils' ability to use English. In schools where a persistent effort is made in the employment of English in these subjects, the best results in the language are invariably obtained.

The writing varies in the schools we visited from poor to excellent, the quality depending largely upon the attitude of the teacher towards this particular phase of the work. Some inspectors are concentrating upon securing neat work books and good writing in the schools of their inspectorates, and in general the pupils are responding satisfactorily to their efforts.

An Outstanding School

We should not leave this detailed report of the conditions of the schools without special reference to at least one of the number. The school of the highest general efficiency that we inspected during the year was the St. Pierre Separate School in Ottawa. The staff consists of one Second Class and six First Class teachers, all graduates of the University of Ottawa Normal School. The pupils are well trained in all the school subjects and have almost equal facility in the use of English and French, passing from one language to the other without perceptible effort. Under the direction of the local inspector and the principal and staff of the Normal School, the school is used for practice and observation by the teachers-in-training. It is a remarkable demonstration of the results that can be obtained under the present scheme by a well qualified and capable staff of teachers working in close co-operation with Departmental officers.

The High School Entrance Examination

A fair test of the efficiency of the elementary schools lies in the number of pupils who complete the course and pass the High School Entrance examination. In June, 1932, the number of French-speaking pupils successful in this examination was 1,383. This represents an increase of 135 over the preceding year. Of a total enrolment in the schools of approximately 36,000, it is evident that about 4 per cent. are completing the course each year. This cannot as yet be regarded as a satisfactory situation, in view of the fact that, in all the elementary schools of the Province, the proportion of the whole enrolment from Form I to IV, inclusive, passing the High School Entrance is nearly 8 per cent. But in view of the handicaps under which these schools have so long operated, the results achieved in the brief period of five years might well be regarded as remarkable.

The main reason for the smaller percentage of successful French-speaking candidates in relation to the total enrolment has already been suggested in another connection. The pupils who have been coming up for the Entrance examinations in the past three or four years were those who obtained their primary training in the schools under poorly qualified teachers before the new scheme came into operation, and the comparatively low average of success is the result of defects in the training which they received while in the junior grades. The rapid improvement in the qualifications of the teachers, with the consequent improvement in the training of the pupils throughout all the grades, gives hope that within two or three years the percentage of successful Entrance candidates will advance considerably. There is in the meantime one feature of promise—the number of French-speaking pupils passing the High School Entrance is gradually increasing year by year. The following table shows the number of successful candidates during the last four years:

Table Showing the Number of Successful French-speaking Candidates at the High School Entrance Examination

	Urban Schools	Rural Schools	Total	Percentage of Enrolment
1929	594	290	884	2.5
1930	617	345	962	2.8
1931	865	383	1,248	3.5
1932	879	504	1,383	3.8

Attendance at the Training Schools

The attendance in the various training schools during the session of 1932-33 may be classified as follows:

UNIVERSITY OF OTTAWA NORMAL SCHOOL

	Male	Female	Total
First Class Course	18	14	32
Second Class Course	11	154	165
Total	29	168	197

SANDWICH MODEL SCHOOL

	Male	Female	Total
First Year Middle School Course	8	16	24
Second Year Middle School Course	3	35	38
Total	11	51	62

EMBRUN MODEL SCHOOL

	Male	Female	Total
First Year Academic Course	8	12	20
Second Year Academic Course	21	45	66
Professional Course	11	28	39
Total	40	85	125

STURGEON FALLS MODEL SCHOOL

	Male	Female	Total
First Year Academic Course	20	47	67
Second Year Academic Course	26	63	89
Professional Course	13	32	45
Total	59	142	201

General Conclusion

Progress towards excellence in any field of endeavour is necessarily slow and gradual. This is as true of the schools attended by French-speaking pupils as of every other human enterprise. That there has been substantial improvement is undoubted. That there has been progress beyond the expectations of those who knew the conditions six years ago is equally beyond question. Though many defects still remain to be remedied, there are many features in the situation which inspire an optimistic outlook for the future. We believe that the spirit of co-operation that is generally manifest among those most concerned in the welfare of the schools—parents, school boards, teachers, and Departmental officers—can scarcely fail to have a decided influence in the direction of improvement. A greater earnestness prevails among the great body of the teachers; their qualifications both academic and professional are generally advancing; the training schools are improving in efficiency; the inspectors are untiring in their efforts to secure a higher standard of work; the Department of Education itself is lending encouragement, counsel, and direction. Under these conditions, we feel confident that the plan, devised and put into operation in 1927, is destined ultimately to a high degree of success, and that the large and important group of schools within its scope will in a reasonable period of time become highly satisfactory institutions for the training of the French-speaking children of this Province.

W. J. Karr,
Director of English Instruction.

A. J. Beneteau,
Director of French Instruction.

Toronto, June 26th, 1933.

APPENDIX F

REPORT OF THE DIRECTOR OF TECHNICAL EDUCATION

It is satisfactory to report that the standard of efficiency in the vocational schools has shown considerable improvement during the past year. With a view to progressive improvement, the Inspectors of this branch required the deposit of all June examination papers, with list of promotions, for scrutiny and comparison. This arrangement has had a wholesome effect on the character of the instruction offered and the organization of the schools generally. By consultation and suggestion Principals and staff are encouraged to confide their difficulties in the officials of the Department, with refreshing results. The Annual Conference of Principals at Easter has also proved a valuable medium for the interchange of ideas.

The vocational day schools are now fairly evenly distributed throughout the entire industrial section of Ontario. Most cities and towns of over 8,000 population are in possession of up-to-date vocational school buildings and equipment, offering a variety of courses suited to local needs; while evening classes are spread over the length and breadth of old and new Ontario, and include classes in mechanical drawing, art, engineering and machine shop work, automobile mechanics, commercial practice, domestic science and domestic art, as well as mathematics, science and English, particularly English for non-English speaking newcomers.

Vocational day work is carried on in three distinct types of centres: (a) the vocational school proper, which is devoted solely to the vocational school curriculum; (b) the vocational school occupying the same building as an academic high school; and (c) commercial departments held within the precincts of a high school or collegiate, but operating under The Vocational Act and Regulations and inspected by the staff of the Vocational Branch of the Department. Of the first type last year there were twenty-six units, of the second twenty-four, and of the third fifteen. The range of subjects included in the vocational curriculum is too wide to describe here in detail. The annual statistics of vocational activities present a complete picture of the practical work involving almost every line of industrial endeavour. Domestic science, domestic art and art continue to attract female students, as do the commercial courses in increasing numbers. Although most vocational schools provide commercial instruction, Toronto, Hamilton and Ottawa are the only centres in which the classes are housed in separate buildings. In the combined schools the commercial work is in charge of a Commercial Specialist under the direction of the school Principal, while in purely commercial schools the Principal is required to hold a High School Principal's certificate as well as a Commercial Specialist's certificate. Vocational agriculture is taught at Beamsville, Renfrew and Ridgetown, and it is hoped to extend the teaching of this subject in co-operation with the high schools as in the case of commercial work. The subjects of the agricultural course include farm mechanics, animal husbandry and the study of field crops and botanical science. No retrogression is permitted in the teaching of English, mathematics, science and physical culture throughout the courses, although the academic subjects naturally receive more emphasis in the matriculation classes than in the preparation of students for immediate industrial employment (where available) on leaving school. Both technical and commercial courses lead to matriculation into the University, special arrangements having been made to admit boys into the engineering departments, girls into household science, and both sexes into the Faculty of Commerce.

Building expansion has necessarily been curtailed on account of economic conditions, but statistics for 1931-32 show an increase of three schools over the preceding year. The three additional schools represent commercial departments which have been taken over to operate under The Vocational Education Act. There are now sixty-five day schools in operation compared with sixty-two in 1930-31. Excessive enrolment of day school pupils has created a problem in many municipalities, the higher forms being congested by the return of pupils ordinarily employable. Danforth School, Toronto, is an example of this condition, necessitating an extension just completed at a cost of some $250,000.00. Evening class registration, on the other hand, has suffered. Adult workers are very unsettled, and attendance has fallen considerably. A comparison with earlier years, however, shows a remarkable and sustained growth in evening class enrolment up to last year.

Probably the outstanding achievement during the year has been the reduction effected in the price of text-books. This reduction was brought about by the announcement of Circular 52 in which were listed the text-books recommended and approved by the Minister for use in vocational schools. The texts were selected on a basis of suitability and price and were shown with "list" and "net" prices appended. This effort, on the part of the Department, represents a material saving to the students and has been heartily endorsed throughout the Province.

It is interesting to observe that male teachers predominate in the vocational day schools. The nature of the shop work no doubt contributes to this end. There were over 800 male instructors last year compared to approximately 600 female teachers. The complete enrolment for 1931-32 numbered 36,328 students, of whom approximately 2,800 were special and part-time students. Most of the students are admitted from the publicly controlled elementary schools. A substantial number, however, transfer from the academic secondary schools, and a few are admitted from private institutions. The usual comparative statistical synopsis for the year follows:

	1930-31	1931-32
Number of schools—Day	62	65
" " —Evening	71	70
Enrolment of pupils—Day	32,695	36,328
" " —Evening	47,440	45,338
Number of teachers—Day	1,332	1,405
" " —Evening	1,647	1,619

	1930	1931
Government grant	$1,114,052 00	$1,470,865 07
Municipal expenditure	8,692,354 00	7,143,645 62

Much progress has been made in developing a suggested course of training in vocational schools to meet entrance requirements to Training Schools for Nurses. Discrimination against girls vocationally-trained has been discovered in some instances; and, consequently, the Minister appointed a Committee in 1932 to draft a course of study suitable to all the parties concerned. The Health

Department, University, Registered Nurses' Association, School Principals and the Department of Education were represented on the Committee, and its recommendations have already been accepted by the Department of Health, the University of Toronto, the University of Western Ontario, and the Department of Education. Contact is being established with all recognized Nursing Schools, with the object of securing a universal standard of entry within the borders of Ontario, without detriment to the vocationally-trained student. This course of study is now ready for publication and should be issued to the schools in the form of a bulletin in the near future.

The Training College for Vocational Teachers at Hamilton has proved of patent benefit to the teachers who have taken the course there, resulting in more carefully organized courses and improved methods of presentation. The output of the college has been generally absorbed, although a few qualified teachers of practical subjects remain unplaced. Care is being exercised to regulate admission, as far as possible, to the known requirements of this branch of the profession.

In a recent employment survey reported by a member of the staff of the Kitchener-Waterloo Vocational School, the following interesting situation was disclosed. In the year 1928 the school placed every one of its graduates in employment. It is not suggested that this in itself was an extraordinary achievement, because business at the time was on the upgrade. The surprising feature of the survey was the revelation that 93 per cent. of those placed in positions are to-day still employed in their chosen vocations; 5 per cent. changed to some other sphere of work, and only 2 per cent. are listed among the unemployed. This remarkable showing serves to justify the existence and continuance of the vocational school, proving, as it does, that through the instrumentality of this type of school the students are finding and retaining their proper place in society in an age of complexity and uncertainty.

It is realized that a sound general education is as essential to the economic worker as to the professional man. Technical education provides special training in the knowledge and skill required for work; it aims to explain to a boy or girl the various processes of that work. At the same time the goal is to develop an efficient and intelligent citizen.

F. S. Rutherford,
Director of Vocational Education.

Toronto, January 18th, 1933.

APPENDIX G

REPORT OF THE DIRECTOR OF PROFESSIONAL TRAINING

Notwithstanding the fact that in the Province there is a marked surplus of teachers for both the elementary and the secondary schools, the number of teachers-in-training enrolled in the various training institutions for the session 1932-33 shows a decided increase over that for 1931-32.

The registration for 1932-33 was as follows:

The Ontario College of Education

(1) In the one-year Household Science Course (women) 11

(2) In the High School Assistant's Course:

	Male	Female	
Intra-Mural	276	269	
Extra-Mural	25	21	
Summer (1932)	49	46	
	350	336	686

(3) In the Pedagogy Course:

Summer (1932)	110	
Winter (1932–33)	136	
		246

Note.—In this course, in June, 1932, there were granted 54 Bachelor of Pedagogy, and 4 Doctor of Pedagogy Degrees.

(4) In the Librarians' Course 49

(5) In the Specialist Courses not included in High School Assistant's Course 42

Total enrolment 1,034

(6) Registered in the Specialist Courses there were 312 students classified as follows:

	Intra-mural	Extra-mural	Total
Agriculture	18	..	18
Art	21	..	21
Classics	21	11	32
English and French	12	18	30
English and History	34	20	54
English, French and German	1	..	1
French and German	16	..	16
French and Spanish	7	2	9
Latin and French	..	1	1
Household Science	20	..	20
Mathematics and Physics	20	5	25
Science	25	10	35
Physical Education	50	..	50
Total	245	67	312

(7) In the supplementary courses there were enrolled:

In the First Class Public School Course	88
In the Elementary Art Course	39
In the Commercial Course	108
In the Music Course	13
In the Physical Education Course	220

(8) The academic standing of the students in the High School Assistant's Course was:

B.A. or M.A.	592
B.A.Sc.	24
B.Sc.	22
B.Sc. F.	4
B.S.A.	18
B.H. Sc.	14
B.Com.	10
B. Arch.	2
	686

(9) Forty-seven graduates from Universities outside Ontario were registered as follows:

Acadia	1
Alberta	1
British Columbia	2
Cambridge (England)	1
California	1
Dalhousie	4
Laval	4
London (England)	3
Manitoba	15
McGill	6
Montreal	5
Mount Allison	1
Pittsburg	1
Saskatchewan	2

SPECIAL COURSES

At each Normal School a special class in Art or in Physical Education was instituted in order to enable First Class teachers-in-training to qualify for the Elementary Certificate in these branches. The enrolment was:

ART—Hamilton, 94; London, 91; North Bay, 55; Peterborough, 45.
PHYSICAL EDUCATION—Ottawa, 92; Stratford, 78; Toronto, 110.

Permanent Certificates

One hundred and six teachers holding Permanent Second Class certificates raised their professional standing to Permanent First Class.

Second Year Course—Elementary Certificates

Of the teachers-in-training in the Second Year Course 91 registered in the course for the elementary certificate in Art, 62 for Music, 56 for Agriculture, 46 for Physical Training, 9 for Manual Training, Part I, and 14 for Household Science, Part I.

Changes in the Teaching Staff

Captain J. M. Grindlay, Physical Training Instructor at the Hamilton Normal School, died on January 14th, 1932, and on September 7th, death also removed Mr. A. D. Jordan, Music Instructor at the London Normal School.

On September 1st, 1932, Principal J. C. Norris, B.A., B.Paed., retired from the staff of the North Bay Normal School; C. H. Edwards, B.A., D.Paed., from the Peterborough Normal School; Miss Auta Powell, Miss Nina A. Ewing, and Miss Mary E. Macintyre from the Toronto Normal School. On December 31st, G. A. Miller, M.A., B.Paed., retired from the Ottawa Normal School.

Appointments to the several Normal School Staffs were made as follows:

London—Charles E. Wheeler was appointed Music Instructor on November 15th, 1932.

North Bay—H. E. Ricker, M.A., B.Paed., was appointed Principal on September 1st, 1932.

Miss H. Blanch Mitchell, B.A., was appointed Librarian and part-time Master on November 1st, 1932.

Ottawa—Miss L. M. Lorriman was appointed an Assistant Teacher in the Model School on September 1st, 1932.

Peterborough—Mr. Maurice H. Park, B.A., B.Paed., was appointed a Master—his appointment to date from December 1st, 1931.

Toronto—On September 1st, 1932, Miss Olga I. Johnston was appointed Instructor in Household Science, Miss Eleanor M. Shepherd, M.A., Instructor in Art; Miss Mabel E. Hodgins, Kindergarten Directress, and Miss Rhea Mossop, Assistant to the Kindergarten Directress, and on November 15th, 1932, Mr. Robert A. Johnston was appointed a Master.

DUNCAN WALKER,
Director of Professional Training.

Toronto, December 31st, 1932.

APPENDIX H

REPORT OF THE PRINCIPAL OF THE ONTARIO TRAINING COLLEGE FOR TECHNICAL TEACHERS

Attendance

The enrolment of students in 1932 showed a decrease for the first time since the establishment of the Training College.

Year	Enrolment
1925	183
1926	204
1927	239
1928	270
1929	276
1930	371
1931	514
1932	272

The principal factor bringing about this decrease was the withdrawal from the offerings of the summer school of a number of courses that had been given in previous years. No summer courses in Vocational Guidance, in Elementary Household Science, and in Elementary Manual Training were given.

The enrolment in the course for teachers of Vocational Subjects was affected by the change from the twenty weeks' course, of which ten might be taken in summer courses, to a twenty-five weeks' course none of which could be taken in summer courses. As a result of this change there was no beginners' class in the summer session of 1932.

These two factors resulted in a decrease in these groups of 156 and 67, respectively, measured by the attendance of 1931.

Rearranged Course

To meet the conditions existing in 1925, when the Training College for Technical Teachers was established, provision was made for a twenty weeks' course for the Ordinary Vocational Certificate, ten of which should be taken in the autumn or spring, and the other ten in two summer courses of five weeks each. As pointed out in my report for 1931 these conditions have largely passed away, and it became possible to provide a course requiring continued attendance.

The new arrangement took effect in the autumn of 1932 and there is now in attendance the first group taking work under this scheme. The new arrangement is working out most satisfactorily.

Under the old arrangement students took two and sometimes three years to complete the course, with long breaks between the parts of the work. Under the new arrangement there is no loss of time in reviewing and "warming up." Now that all of the work is given by permanent members of the staff there has been less over-lapping and fewer omissions, than under the old scheme where parts of the work were taken by summer school instructors. The students are covering more work, and doing it more thoroughly.

The main advantage of the new arrangement is that the teachers-in-training have better opportunities for practice-teaching. Twice as much time has been provided for what is after all the vital subject of the course. Lectures, discussions, observation lessons, and demonstrations are all very well, but they serve only to set up correct patterns of teaching technique and ideals of performance. These patterns and ideals are not learned until they are practised. One learns what one practises. The longer term has provided more elasticity in choice of lesson topics and assignment of classes, more frequent contact and discussion between the staff and the student teachers, and more practice lessons by the latter.

Special Summer Courses

As stated previously a number of courses were not offered in the summer session of 1932. Those courses, however, dealing directly with certification for vocational schools were offered. In addition to the teachers-in-training completing, under the old arrangement, the course for the Ordinary Vocational certificate, there were in attendance certificated teachers in the following improvement courses.

Vocational Specialist's Certificate	63
Special Students	10
Sewing and Dressmaking	30

Enrolment for 1932

	Men	Women	Total
1. ORDINARY VOCATIONAL:			
(a) Spring Session	47	2	49
(b) Summer Session	100	6	106
(c) Autumn Session	15	7	22
2. SPECIAL COURSE "A":			
Winter and Spring	...	3	3
3. ORDINARY MANUAL TRAINING:			
Winter and Spring	23	...	23
Autumn	5	...	5
4. SUMMER COURSES (other than 1-b.)	63	40	103
	253	58	311
Duplications	37	2	39
5. Total individuals	216	56	272

F. P. GAVIN,

Hamilton, March 1, 1933. *Principal.*

APPENDIX I

REPORT OF THE INSPECTOR OF AGRICULTURAL CLASSES

Public and Separate Schools

Agricultural instruction is given to the pupils of Forms III, IV, and V, where local School Boards decide to introduce it under the Regulations of the Department of Education.

A steady increase in the number of schools undertaking this work is noted from year to year as Boards and teachers become better acquainted with the purpose and scope of the subject and the value of the elementary study of Agriculture is more generally recognized.

The abbreviated table given below, shows the number of schools which have met the requirements of the Regulations and qualified for agricultural grants over the period indicated.

Year	No. of Schools	Year	No. of Schools	With School Gardens	With Home Gardens
1903	4	1914	264	208	56
1904	7	1915	407	222	185
1905	6	....	...	....	....
....	...	1920	1,648	702	946
1910	17	....	....	....	....
1911	33	1925	2,509	783	1,726
1912	101	....	....	....	....
1913	159	1928	3,595	1,059	2,536
....	...	1929	3,952	1,077	2,875
....	...	1930	4,342	1,308	3,034
....	...	1931	4,658	1,330	3,328
....	...	1932	4,906	1,344	3,562

The lack of qualified teachers still presents a problem, but this difficulty is gradually disappearing as a larger number of qualified teachers are available each year, through the Summer Courses, the Agricultural Courses in Secondary Schools and the second year at Normal School.

The following statements taken from Annual reports submitted to the Department of Education for 1932, indicate to some extent how the subject is appreciated by those actually concerned.

S. S. No. 22, Mountain, Dundas County—W. J. Stewart, Inspector.

Everyone is well pleased with the school garden. It has been well laid out.

(Signed) E. Bryan,
Chairman of Board.

U. S. S. No. 10, Montague, Lanark County—J. C. Spence, Inspector.

The pupils seem to take a great interest in both flowers and vegetables, also indoor plants. They learn how to transplant the plants grown in school, also thinning out, weeding, etc. Pupils attend their own plots at school during the summer. They also have plots at home.

(Signed) George I. Bennett,
Secretary.

S. S. No. 17, Peel, Wellington County—L. P. Menzies, Inspector.

Garden is in good condition. Lawn is well kept and children seem to be taking a deep interest in this work.

(Signed) N. E. Miller,
Secretary.

S. S. No. 13, Raleigh, Kent County—G. A. Pearson, Inspector.

The Ontario Department of Forestry's offer to supply young trees to indiviudal pupils providing the orders were through the school, was taken advantage of and proved to be very educative and interesting, both to pupils and parents.

The pictures of horses supplied by the Department of Agriculture never fail to attract the attention and hold the interest of both pupils and visitors.

(Signed) Arthur H. Alexander,
Teacher.

S. S. No. 2, McNab, Renfrew County—C. W. Lees, Inspector.

This school takes a keen interest in Agriculture. We have both school and home gardens. Last year at the Rural School Fair, the Township Cup was won, also the Pupils' Trophy given to the pupil taking the highest number of points.

(Signed) D. G. Forrest,
Secretary.

S. S. No. 4, Zone, Kent County—A. B. Lucas, Inspector.

Our teacher, Miss Ruby Boyd, has carried on the Agricultural part of her work to very good advantage and I think it has been of great benefit to the pupils.

(Signed) G. H. Snary,
Secretary.

In addition, Agriculture of the Lower School Courses is taught in accordance with the Regulations in Form V of the following Public and Separate Schools:

S. S. No. 16, Cornwall Township, R.C.S.S.; S. S. No. 1, Lowther and Landry Public School; No. 4, Mornington, R.C.S.S.; Point Anne Public School; Port McNicoll Public School; St. Jacobs Public School; Tecumseh Public School; S. S. No. 4, Wellesley Public School; S. S. No. 8, Windham, R.C.S.S.; S. S. No. 7, Woolwich Public School.

Secondary Schools

Three schemes are provided for as stated below, any of which may be carried on by those schools which meet the requirements of the Regulations of the Department of Education.

1. Optional classes as a four-year course which may lead to Normal Entrance or Junior Matriculation. A person who completes the four-year course in Agriculture is entitled to an Elementary Certificate when he completes the Normal School course.

2. Department of Agriculture under the High Schools Act.

3. Department of Agriculture under the Vocational Education Act.

Under scheme (1) above, Agriculture was taught during the year in the following schools:

Collegiate Institutes:

Barrie, Belleville, Brockville, Clinton, Cobourg, Cornwall, East York, Fort William, Goderich, Ingersoll, Kitchener, Lindsay, Napanee, Orillia, Perth, Picton, Port Arthur, Renfrew, Runnymede, Scarborough, Smith's Falls, Stamford, Strathroy, Walkerville, York Memorial.

High Schools:

Amherstburg, Athens, Beamsville, Bowmanville, Bracebridge, Bradford, Brighton, Burlington, Caledonia, Cayuga, Cobalt, Dundas, Dunnville, Elmira, Essex, Fergus, Fort Frances, Hagersville, Haileybury, Iroquois, Kincardine, Kingsville, Leamington, Listowel, Madoc, Markdale, Midland, Milton, Mitchell, Nepean, New Liskeard, Norwich, Oakville, Petrolia, Port Elgin, Port Perry, Ridgetown, Ridgeway, Saltfleet, Shelburne, Smithville, Stirling, Thorold, Uxbridge, Waterdown, Watford, Welland, Whitby, Williamstown, Winchester.

Continuation Schools:

Agincourt, Belmont, Brownsville, Castleton, Coldwater, Comber, Drayton, Drumbo, Embro, Fordwich, Ilderton, Kinmount, Lobo, Lynden, Lyndhurst, Mindemoya, Minden, Mount Albert, Mount Brydges, Mount Elgin, Mount Pleasant, New Hamburg, Pakenham, Pelham, Princeton, Sparta, St. George, Stouffville, Thamesford, Thornbury, Thorndale, Wales, Wheatley, Woodville.

Approximately 13,600 pupils were enrolled in the above mentioned classes during the year and since many of those who complete the work of Middle and Upper School, attend Normal School, these courses are becoming increasingly effective in adding to the supply of teachers qualified to teach Agriculture in the Public and Separate Schools.

The following Schools are carrying on under the scheme indicated in (2) above: Drayton, Elmira, Listowel, Port Perry, Wheatley, Whitby.

Under (3) above, the following schools are now maintaining classes and qualifying for grants under the Vocational Education Act: Beamsville, Renfrew, Ridgetown. In each of these schools, courses in Agriculture and Farm Mechanics are offered for boys and in Home Making for girls.

It is the policy of the Department to promote the development of Vocational Departments of Agriculture in Secondary Schools. A special class in Vocational Agriculture was organized in November at Stamford Collegiate Institute in which a group of boys are given additional time on Agricultural subjects. While this is an experiment, it is hoped that in the future, classes in Vocational Agriculture will be introduced into many of our schools and courses offered in Live Stock, Field Crops, Poultry, Agricultural Chemistry and Physics, Farm Mechanics and other subjects suited to the needs of the community.

Teacher Training

An Elementary certificate in Agriculture may be obtained by completing two Summer Sessions of five weeks each, either at the Ontario Agricultural College, Guelph, or at the Kemptville Agricultural School. A teacher who is qualified to teach in any school of the Provincial system, may be admitted to these summer courses.

The Elementary certificate may also be obtained by those who have completed the four year course in Agriculture in a Secondary School, followed by a course at Normal School. This certificate qualifies the individual to teach Agriculture in a Public or Separate School.

An Intermediate certificate may be obtained by completing two Summer Sessions at the Ontario Agricultural College, Guelph. A teacher who holds Upper School standing with the Science option or is qualified to teach Science in a High School may be admitted to this course and the Intermediate certificate qualifies the holder to teach Agriculture in a Public or High School.

A Specialist certificate in Agriculture may be obtained by those who hold an Intermediate certificate if they are otherwise qualified, on completion of a third Summer Course in Agriculture and a course in Farm Mechanics. A Specialist certificate may also be obtained by the holder of a B.S.A. degree who completes a year's attendance and passes the examinations at the College of Education.

The following tables show the attendance at the Summer Courses:

Normal Schools

Instruction in Agriculture is given in each of the seven Normal Schools.

In the first year practically the same course is given for teachers-in-training for the First Class as for the Second Class certificate. This is particularly valuable in promoting the teaching of Agriculture in the schools, since all students, whatever their preparatory work may have been, receive instruction in subject matter and methods.

The instructors are well qualified, three holding the Specialist certificate and four the Intermediate certificate and all are enthusiastic in promoting an interest in the subject.

In the second year, a course leading to the Elementary certificate is now provided as one of the electives for all who do not already hold the certificate. Those who elect for service in rural schools, must complete standing for the Elementary certificate.

NORMAN DAVIES,
Inspector of Agricultural Classes.

Toronto, February 10th, 1933.

APPENDIX J

Progress

It is very satisfactory to be able to report that in spite of the depression through which the country is passing there has been an increase rather than a decrease in the number of auxiliary classes throughout the Province. School Boards are to be congratulated on maintaining intact and in effective operation organizations upon whose existence so many boys and girls are utterly dependent for whatever educational preparation can be given them toward self-respecting, self-supporting citizenship.

While the number of organized classes in urban centres has increased from 310 to 313, the number of rural units instituted according to recently formulated regulations has increased from 9 to 39. At the present time there are 313 organized urban classes and 39 rural units looking after the special needs of some 6,358 children.

Rural Units

The number of rural units at present in operation is as follows:

Sight-saving Units

Brant County	2
Carleton County	2
Halton County	1
Lambton County	3
Renfrew County	2
Waterloo County	6
York County	3

Home Instruction Units:

Elgin County	2
Oxford County	2

Rural Training Units:

Halton County	1
Lambton County	5
Norfolk County	1
Oxford County	2
Waterloo County	3
York County	3

The extension of auxiliary education by the plan of organizing special units among the regular grades of a school was an experimental attempt to give children in rural communities and other small areas the same educational opportunity as had hitherto been afforded pupils requiring special attention in urban centres. That the experiment has worked out so successfully is largely due the co-operation extended by inspectors, school principals and school trustees together with the unselfish interest and unstinted effort displayed by the teachers concerned in the welfare of pupils under their charge.

It has been found that pupils constituting sight-saving units when supplied with large type readers and movable seating accommodation make progress almost as satisfactorily as pupils in the regular sight-saving groups of urban centres. Home instruction units have brought happiness and the possibility of occupational usefulness to boys and girls whose outlook upon life had heretofore been one of helpless resignation. Pupils in training units who previous to such placement had made little or no progress during several years of attendance and who were becoming problems in the school and in some cases problems in the community, through being supplied with simplified academic courses, special academic learning material and a certain amount of craft work have had their confidence restored, their interest in school renewed and their academic advancement very appreciably increased. While much work in perfecting methods of procedure remains to be accomplished the results obtained from these experiments would seem to have justified the institution of such units. It is hoped that the day is not far distant when special educational facilities for children in rural communities and small centres will have been established on a basis of equality with those in larger urban areas.

Texts for Sight-saving Classes

The experiment of magnatyping and multigraphing the Public School Speller, which was undertaken in 1931, proved so successful that similar reproductions of the First Reader and Second Reader were carried out this year. The Red Letter Primer published by Dent & Co. is a satisfactory text for pupils in the Junior First grade of Sight-saving classes and units. The Sight-saving group in the Toronto Association of Auxiliary Class Teachers have prepared or have in course of preparation texts and exercises in Geography, Composition and other subjects. This organization has very generously made provision whereby sight saving units and classes outside of Toronto may through this office be supplied with these compilations.

Teacher Training

All teachers of Auxiliary Classes are specially trained in a five-weeks' Summer Course. The minimum qualifications of applicants are: (1) Normal School graduation; (2) three years' teaching experience; (3) a certificate from their Inspector of special aptitude for the work.

Courses are provided for teachers in: (1) Training, promotion and special industrial classes; (2) Oral, lip-reading and speech-correction classes; (3) sight-saving, orthopedic and hospital classes. Owing to the financial depression there was no Summer school for the training of auxiliary class teachers in the year 1932. Recent changes have been made in the organization of summer schools conducted by the Department of Education whereby entrants are charged a slight fee toward the support of these schools and summer school courses (1) and (3) for auxiliary class teachers will be put on in the year 1933 should a sufficient number of teachers make application.

Brief courses were given in the Normal Schools of the Province to acquaint teachers in training with methods of dealing with auxiliary type pupils in rural schools.

The Auxiliary Class teachers throughout the Province have been organized into eight associations. The monthly or bi-monthly meetings of these groups are well attended and the teachers are stimulated by (1) discussion of problems, (2) exhibition of craft work, (3) study of new methods.

Valuable assistance is rendered by the annual O.E.A. meeting and by the Auxiliary Class Teachers' Bulletin.

The Establishment of Classes

In Ontario the establishment of Auxiliary Classes is a matter within the autonomy of local school boards. Advisory assistance, free surveys and grants equivalent to one-half the excess cost of education are provided by the Government. The placement of exceptional children is an affair which requires delicate handling. It is felt that a policy which aims at securing the goodwill and voluntary co-operation of a community through explaining to the representatives of the public the need of special training for this type of child is productive of more beneficial and permanent results than measures of compulsion. It should likewise be noted that all circumstances tending to point out or otherwise distinguish children in these classes from those in the regular grades have detrimental influences on the welfare and success of the class.

Manual for Use of Auxiliary Class Teachers

In the summer of 1931 the General Editor of Text Books was authorized by the Minister of Education to prepare a manual for the use of teachers in auxiliary classes. The book was to be sufficiently comprehensive not only to afford guidance to teachers in the several kinds of auxiliary work but likewise teachers of the regular grades who might have in charge pupils of the auxiliary type or approximating the auxiliary type but in whose schools no auxiliary organization had been established.

The editors and committee commissioned to prepare the work completed their task in 1932 and the manual was published by the Ryerson Press in February 1933 under the title, "Training Handicapped Children." The volume consists of 328 pages and is listed to sell at $1.50 with the usual discount of 20 per cent. to teachers and school boards buying direct from the publisher.

Handicapped children are classed as physical, mental and social variants. Modes of organization, courses of study and methods of instruction are outlined in considerable detail in case of each class. Generalized discussion has been avoided. Theory has been presented in the form of definite specific methods of procedure which actual practice in the three hundred and fifty odd classes of the province has proven to work out successfully.

It is hoped that the manual may serve (1) as a guide to auxiliary class teachers especially those who may have recently entered the work (2) as a means of acquainting inspectors, school principals, school boards and others concerned with the work of auxiliary class organizations (3) as a reservoir for the preservation and dissemination of the many excellent exercises and effective plans that have been originated by teachers scattered here and there throughout the province, (4) as an aid to the teacher who may have pupils suffering under physical or mental handicaps but in whose school exists no auxiliary class organization. The chapters dealing with courses of study, special methods for direct learners, drill lessons, seat work exercises and hand work procedure should afford assistance to the regular public and separate school teacher who without special training has to meet problems of retardation. The author of the chapter on speech correction has presented methods of diagnosing and correcting speech defects in such a simple direct straightforward fashion and has included such a wealth of carefully selected and carefully tried-out practice material that teachers in centres where there are no speech correction classes should be able by following instructions to effect considerable improvement among pupils suffering under this serious handicap.

H. E. Amoss
Inspector of Auxilliary Classes.

February 27th, 1933.

APPENDIX K

REPORT OF THE INSPECTOR OF MANUAL TRAINING AND HOUSEHOLD SCIENCE

Manual Training Centres

Manual Training centres to the number of 133 have been in active operation during the year, distributed through the following cities, towns and villages as follows: Brantford (2), Fort Erie (Bridgeburg) (1), Brockville (1), Chatham (1), Fairbank (York Township) (1), Guelph (1), Hamilton (15), Humbercrest (S.S. 32, York) (1), Ingersoll (1), Kingston (1), Kitchener (2), London (9), North Bay (1), Ottawa (15), Owen Sound (2), Pembroke (1), Port Perry (1), Peterborough (3), St. Catharines (1), Rawlinson (York Township) (1), Sarnia (2), Stratford (3), Toronto (53), Walkerville (3), Waterloo (1), Whitby (1), Windsor (7), Woodstock (1), Swansea (1). Manual Training is taught in three Collegiate Institutes in Hamilton, three in Toronto, and in Collegiate Institutes at Brockville, Ingersoll, Owen Sound, Stratford, Woodstock and Whitby. In all other cases the work is concerned with Public School pupils. Owing to the financial situation existing in Windsor, it was thought necessary by the local authorities to close the Public School Manual Training centres to the number of 7 and in Brantford to open the two centres half time only, thus employing one teacher instead of two. The 7 equipments in Windsor have, I am informed, been carefully catalogued and stored away until conditions warrant the re-introduction of the subject.

Household Science Centres

Household Science centres to the number of 129 have been in active operation distributed as follows: Brantford (2), Bridgeburg (1), Brockville (1), Chatham (1), Cobourg (1), Fairbank (York Township) (1), Guelph (1), Hamilton (17), Humbercrest (S.S. 32, York) (1), Ingersoll (1), Kingston (1), Kitchener (2), London (10), Mitchell (1), North Bay (1), Ottawa (9), Owen Sound (2), Port Perry (1), Peterborough (3), St. Catharines (1), Sarnia (2), Stratford (3), Toronto (53), Walkerville (3), Rawlinson (York Township) (1), Swansea (1), Windsor (7), Woodstock (1). Household Science is taught in three Collegiate Institutes in Hamilton, three in Toronto and in Collegiate Institutes at Brockville, Cobourg, Ingersoll, Owen Sound, Woodstock, Mitchell, Port Perry. The situation in Household Science at Windsor and Brantford is the same as that previously noted in the case of Manual Training.

Character of the Work in Manual Training

Apart from the discontinuance of Manual Training in Collingwood a year ago, the closing of the centres in Windsor in September, the release of one teacher in Brantford, and the inability to open any new centres except in Toronto, the present economic situation has had no effect on the condition of the Manual Training and Househod Science centres in the Province except perhaps to accentuate the necessity for rigid economy in the efficient use of material. The constructive work of the lower grades has shown considerable development.

The students in all the Normal Schools are given instruction in the manipulation of paper, cardboard, clay, raffia, reed and other materials for purposes of muscle training, intelligence training and co-relation with other school subjects. These materials are also being used as an introduction to the more advanced work of the Manual Training rooms, particularly in the use of the rule and the development of accuracy. In regard to the special rooms devoted to Manual Training, much more attention is being paid to the general appearance of the rooms and the condition of the working equipment. The rooms are being decorated with charts, working drawings, processes of manufacture, blue prints, specimens of pupils' work and many objects which, while being useful for decorative purposes, are also being made use of very largely for educational purposes in making the instruction more vivid and realistic.

The Public School Course of Study provides courses in Art and Constructive Work for all grades with the object of developing in the pupil a facility in expressing his ideas by means of certain manual activities. On the Art side, the pupil is trained to express his ideas in a pictorial way by the use of pencil, crayon and brush; on the Constructive side in the making of objects of beautiful form and shape by the use of tools. In many schools a close connection between Art and Manual Training is being established and both subjects are benefitting from the connection. Manual Training teachers and Art teachers are together designing models, the shape and form of which are in conformity with all accepted art principles. After these models are soundly and correctly constructed, they are taken to the Art room and under the direction of the Art teacher, are decorated with designs applicable to the shape and use of the object. Applied design taught in this way is a living thing and means much more to the pupil than a design drawn on paper with little reference to the material to which it is to be applied, and the Manual Training models, owing to the Art principles embodied in their construction and decoration, become much more attractive and educational.

A characteristic feature of the present philosophy of Manual Training is the desire to extend its scope not only in the character of the objects made and in the processes involved but also in the use of a number of different materials not hitherto employed. Wood was formerly practically the only material used, but we now find metal, leather, etc., coming into use while such processes as making concrete, repairing furniture, soldering, repairing a mortise lock, glazing a sash, wiring a bell, hanging a door, reading a gas, water, or electric meter, making window screens, reseating a cane bottom chair, and a number of household problems are being gradually introduced.

Another recent development is in the use of small power machines such as lathes, drills, circular saws, jig saws, etc., not only in the schools, but also in home workshops. Tools of this description are being manufactured by a number of firms, sold at a most reasonable price and are proving remarkably efficient, making possible the extension of the work to a remarkable degree.

A recent English report on "Trade Schools on the Continent" states that "In most of the urban areas in England, Local Education authorities have developed to a considerable degree of efficiency in their Senior Secondary Schools a system of Manual Training Instruction which has contributed greatly to the maintenance of hand skill and adaptability among the present generation of workmen. The success of this type of training is probably due in part to the fact that it has had no vocational intention but has aimed at developing simultaneously the mind and body of the pupil, giving him control over his muscles and imparting to him a knowledge of the working quality of certain raw materials.

This branch of instruction should be further developed in the Senior Elementary Schools without any vocational basis but with exactly the same educational aim as at present. It would, however, be worth while to install, as opportunity serves, more machinery of a simple kind and sometimes to undertake small building operations. In this last type of work due attention should be paid to planning, the making of a working drawing, the calculation of cost and finally the suitable decoration of the work, and every opportunity should be taken of developing "team work."

Smaller Towns and Villages

Manual Training and Household Science as at present organized have, to a large extent, been provided for in the larger towns and cities, but seeing that a large part of our virile population still live in our smaller towns and villages it is quite time that some adequate attention be paid to that part of our people. The problems to be met with here are different and will require a special method of treatment. These problems may be solved by a variety of methods chief of which would appear to be:

1. Grouping of centres with an itinerant teacher.
2. The provision of teachers with both academic and technical qualifications.
3. Close co-operation between the Manual Arts and Industrial Education.

1. Grouping of centres under one instructor. Owing to the extension of radial and bus lines, 3 or 4 towns within easy reach of one another, each having its own Manual Training and Household Science equipment, and each paying its share of the special teachers' salaries according to the time spent in each place, might be placed under the charge of one instructor. All that is required to carry out this plan is co-operation among the authorities of three or four places animated by a common purpose.

2. Teachers with a double qualification. The small High, Continuation or Public School cannot provide sufficient pupils to employ the whole time of a Manual Training or Household Science teacher, even if the District could afford the expense. If a small group of teachers could be qualified for teaching the academic subjects of the High School curriculum in addition to Manual Training or Household Science, the introduction of these subjects would be much easier and the whole time of the teacher might be occupied. The lack of such doubly qualified teachers has been felt in some small schools and temporary certificates in Household Science have had to be granted to fill this need.

3. Co-operation between Manual Arts and Industrial Education. In the smaller places it will most likely be found impossible to establish independent technical schools and even the present type of composite school may be beyond their resources. To meet these conditions, a new type of school combining Manual instruction with Vocational Training will probably be necessary. Formal woodwork is in danger of becoming somewhat commonplace, and its newness, attractiveness and educational value have, to some extent, been lessened particularly in classes taught by teachers lacking vision, initiative and resource in devising new projects and new methods. Industrial conditions have changed and have relegated woodwork, particularly by hand, to a less important position. Under these circumstances a revision of the High School Course of Study including the provision of additional activities, the use of new materials and a departure from the traditional equipment may have to be made.

The type of equipment may be that known as the general shop now being adopted in many of the so-called Junior High Schools of the United States. Here provision may be made for woodwork, sheet metal work, plumbing, electricity, forging, auto mechanics, machine shop work, draughting, millinery, dressmaking, cookery, household management, etc. Arrangements could be made so that the shops and other rooms may be used both for ordinary High School pupils and pupils taking a vocational course. The adoption of some such plan as above outlined would do much to meet the needs of those small places that cannot employ the whole time either of a Manual Training teacher or a Vocational instructor.

Character of the Work in Household Science

The Household Science work has progressed much as in previous years. It naturally divides itself into two parts, first that taught in the lower grades by the class teachers who have received instruction during their Normal School Course, and second the work in foods and more advanced sewing taught in specially equipped rooms by teachers who in addition to the Normal School training hold a Household Science certificate obtained on the completion of the one-year course at the Ontario College of Education, or of the two-year course at the Macdonald Institute, Guelph.

In the larger towns and cities, the work in the grades is well organized and supervised. The progress of the elementary work, though provided for in the curriculum, is not so well organized in the smaller centres, as it is left largely to the initiative of the individual teacher, but notwithstanding this, a large amount of good practical work is being done, particularly by the newer and younger teachers.

The special Household Science centres are generally remarkably well equipped and both pupils and teachers are taking great interest and pride in the appearance of the rooms and the condition and arrangement of their equipment.

A growing characteristic of the work is the extent to which it is being made use of in the social service of the school. Parents' days, social meetings, provision of refreshments for various occasions, entertainment of visiting athletic teams and public officials are all being used to afford definite practical work to the girls and to increase the influence of the schools in the community.

Attention is being given not only to cookery and sewing in these classes, but also to sanitation, general care of the home, decoration, manners, the right kind of dress, the care of children, and the ability to perform many mechanical operations that are necessary to the daily routine of housekeeping.

While there is a well-planned course of study organized for the Public School, the work that can be done in the High Schools is of a much more advanced character owing not only to the previous training of the pupils, but also owing to their greater maturity and closer proximity to the time when they expect to make definite use of the instruction being given. The work in both Public and High Schools is obviously largely determined by the limited amount of time that can be allotted to it. At the most, from 36 to 40 lessons of 1½ or 2 hours a week can be devoted to this subject and owing to the holidays, examinations and other causes, often much less. In their anxiety to complete the course of study, the temptation to attempt to cover too much is very great. The aim of the teacher should be to have what is taught mastered and retained as a permanent possession rather than to undertake too extensive a course.

Rural Schools

It is gratifying to be able to report considerable progress in the development of Manual Training and Household Science in the rural schools, especially when it is remembered that these schools are working under great difficulties in introducing new subjects and new equipments with limited accommodations and resources. The teachers are showing great ingenuity and resource in overcoming obstacles and considerable self-sacrifice in the time and energy they are devoting to this work. Large numbers of one-room rural schools are putting in one of the four special types of equipment designed for this work and are accomplishing good results, particularly in the direction of supplying the hot dish to supplement the cold lunch brought by the child. The effect this is having on the health of the children, on the character of the work done, in the afternoon, and in improving regularity of attendance, is said to be quite marked in a large number of cases. One outstanding advantage is that the pupils are under proper supervision during the noon-hour and moral and physical injury is prevented. Some School Boards, when advertising for teachers, are stating that noon-hour supervision is required and it is to be hoped that this condition will become much more general. The extent to which this work is adopted and its general character when it is introduced depend upon the enthusiasm of the teacher, the advocacy and interest of the Public School Inspectors, Womens' Institutes and various Home and School Clubs. The interest of outside organizations has been largely responsible for the introduction of these subjects in many cases, and to their continued interest is to be attributed much of the success that is being achieved. Last year there were reported over 1,200 schools serving at least one hot dish at the noon lunch and this year grants are being paid to 1,693 schools with 2,051 separate classes.

There are 162 rural schools teaching Manual Training in 350 classes, forty-five of these classes being in Wentworth County.

The number of classes in Household Science in various outstanding Inspectorates are as follows: Bruce West 37,; District Division XII (Part I), 32; Lincoln, 63; Simcoe South, 32; Hastings, South 41; Peterborough East, 44; Leeds and Grenville, 51; York, 132; District Division, XV, 34; Renfrew South, 57; Dufferin, 32; Northumberland and Durham (3), 40; Carleton East, 36; Grey East, 34; Wellington South, 42; District Division XVI, 36; Wentworth, 58; Dundas, 35; Prince Edward, 32; District Division VII (Part II), 36; Grey South, 32.

Saturday Classes for Teachers in Service

In order to give the rural school teachers in service an opportunity to obtain the Elementary Certificate qualifying to teach Manual Training and Household Science in rural schools, classes have been held for many years in Hamilton Normal School and for the past three years in Toronto Normal School. They are well attended, the teachers showing much enthusiasm, some driving from 50 to 70 miles to attend each Saturday. This year for the first time it has been found necessary to charge a fee of $7.50 for the course and it is gratifying to note that the imposition of this fee has not had the effect of diminishing the attendance, particularly as several of the teachers attending are without positions.

Albert H. Leake,
Inspector of Manual Training and Household Science.

Toronto, February 21, 1933.

APPENDIX L

REPORT OF THE PROVINCIAL SCHOOL ATTENDANCE OFFICER

It was late in the history of world progress before general education came to be recognized as a practical need. Compulsory education as a means to this end is a modern note. Among English-speaking peoples it did not take form till the closing years of the nineteenth century. It is now an accepted fact that

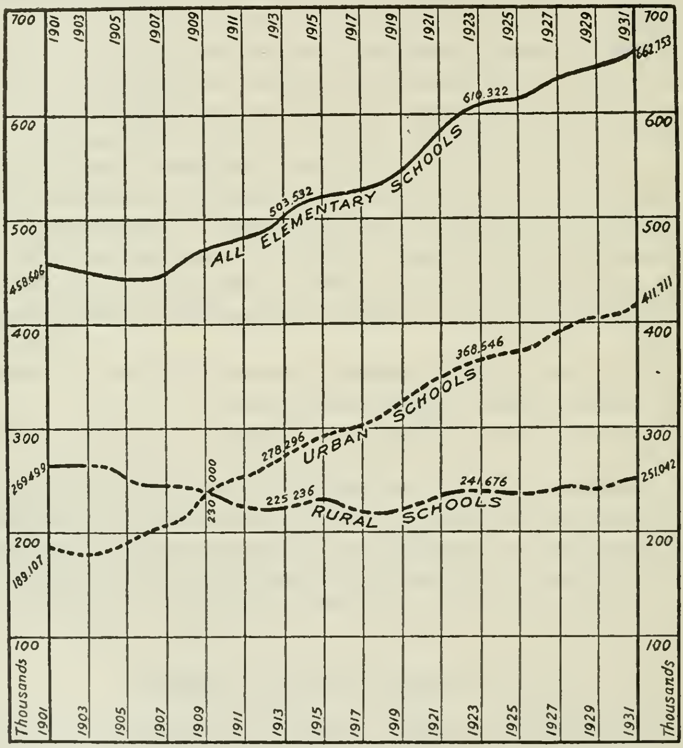

Diagram No. 1

Curve of Enrolment
Elementary Schools
1901-1931

order and progress and good government rest upon the general intelligence of the citizens. It is necessary therefore for the state not only to provide the most favourable conditions for education, but, within reasonable limits, to exercise control of attendance if these ends are to be served.

It is half a century since Ontario set out formally on this mission. By The Truancy Act of 1881 it said, in effect, that wilful ignorance, with all its train of ills, must end. It lent the force of law to assist in bringing every child within the compass of an elementary education. A minimum of eleven weeks in each term for every child between the ages of seven and thirteen was prescribed. In 1885 this was changed to a yearly minimum of one hundred days, and in 1891 the time was extended to the full period during which the school was in operation. It was not till 1919 that the scope was designedly broadened to cover, in a well-defined way, later childhood and early adolescence from eight to sixteen years, with adequate machinery to enforce reasonable compliance with the law and ample provision for excusable and exceptional conditions within that period. Since that time attendance control has been shaping into a smoothly operating and effective system which has rightly earned popular approval and support. A far-reaching improvement has resulted in the past few years. Standards of attendance have been advanced in every class of school and tend to stabilize at a high degree of efficiency. This has been reflected not only in increased numbers and wider diffusion of educational benefits but in a general rise in educational levels and a strengthening of the forces that make for good citizenship.

Progress in Elementary Schools

Diagram No. 1 gives a graphic picture of the movement of enrolment in publicly controlled rural and urban schools and in all elementary schools for the period 1901 to 1931. It takes no cognizance of private and parochial schools which care for over 11,000 pupils. The diagram shows, within thirty years, a rise in urban school enrolment from 189,107 to 411,711, a drop in that of rural schools from 269,499 to 251,042, and in all elementary schools an increase from 458,606 to 662,753. It shows the rapid rise in numbers in urban schools and the slow but steady decline in those in rural schools. In the thirty-year period, the former gained more than 222,000, or over 7,000 on the average, per year, while the latter lost almost 19,000, or an average of over 600 pupils per year. This reveals a radical change in conditions. While rural schools in 1901 had 80,000 more pupils than urban schools, in 1931 the urban schools had outstripped the rural by over 160,000 pupils. The reversal of conditions started in the year 1910. Rapid urbanization of population was taking place, due mainly to the increased industrial and commercial activity in urban areas, coupled with the mechanization of farm industry. Urban centres were not only absorbing the bulk of the immigrants but were attracting a very considerable portion of the youth of the country districts as well. The conditions in the last half of the nineteenth century were completely reversed in the early years of the twentieth century and Ontario was well on its way to becoming largely an industrial province. The schools, particularly of the advanced class, registered this change in a still more pronounced way than the elementary schools.

The standard of attendance has been steadily rising in the past ten years, which is the period during which the revised School Attendance and Adolescent School Attendance Acts have been in operation. The following table shows the increases in detail:

Elementary Schools	Percentage in 1921	Percentage in 1931	Increase
Urban Schools	87.20	91.84	4.64
County Rural Schools	81.42	89.30	7.89
District Rural Schools	78.91	87.71	8.80
All Schools	82.50	90.81	8.31

As will be noted from the diagram the rise was very gradual for the first six years of the period 1921-1931. For the past four years the rise has been specially marked, due in large measure, to the new child-accounting system. Of the total increase of 8.31 per cent. in the ten-year period, 6 per cent. has taken place since 1927. District rural schools have led in the movement, with an increase of 8.31 per cent. It will be noted that the wide spread between schools of the various classes in 1901 has been visibly narrowed, till rural schools, notwithstanding their more serious handicaps, closely approximate urban standards. It is doubtful if a much further advance, especially in urban schools, is possible or indeed wise. For the first time in the history of the Province the general average for all schools has passed 90 per cent. The average of 90.8 per cent. for all elementary schools in Ontario is a striking tribute to the interest and close co-operation of inspectors, teachers and officers in this branch of educational service.

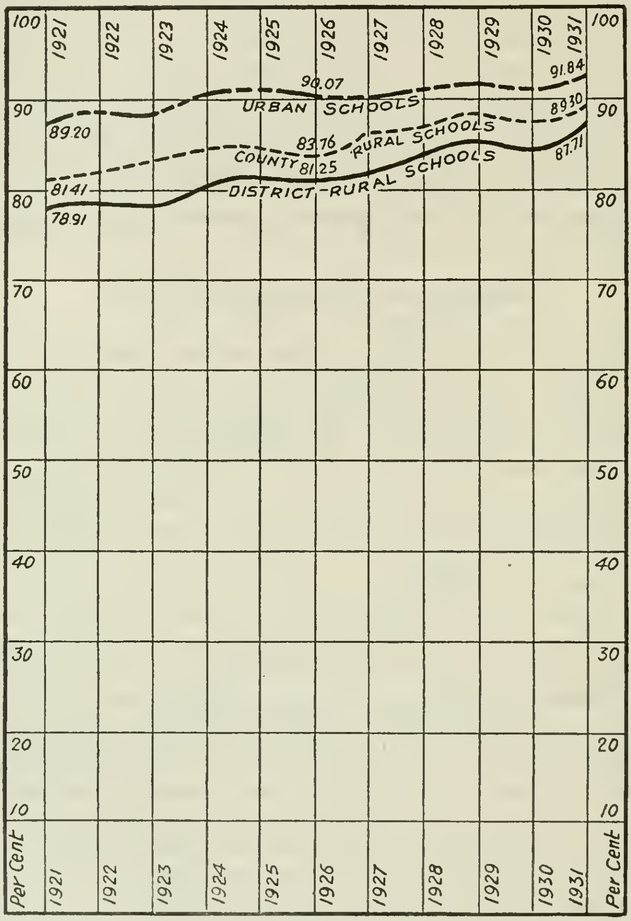

Diagram No. 2

Curve of Progress in Attendance
Elementary Schools
1921-1931

Progress in Secondary Schools

Diagram No. 3 shows the trend in enrolment from 1901 to 1931 inclusive, in the various branches of Secondary Schools. For purposes of comparison the curve of enrolment of Fifth Classes has been included in the diagram side by side with that of Continuation Schools since they serve a similar field, viz., rural and village communities.

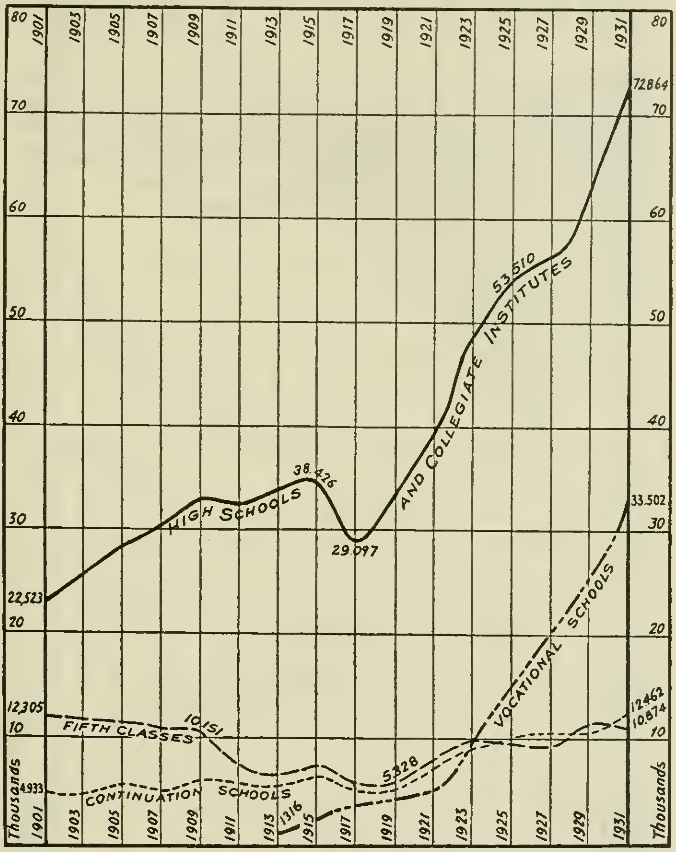

Diagram No. 3

Curve of Enrolment
Secondary Schools and Fifth Classes
1901-1931

The phenomenal rise in numbers in Secondary Schools of all classes may be expressed thus: In 1901 out of every 1,000 in provincial population there were only 12 pupils in Secondary Schools, whereas in 1931 there were 35 pupils, or almost three times the number in proportion to the population.

It will be noted that the last decade of this period, viz., 1921 to 1931, coincides with the period of active operation of The Adolescent Attendance Act for all pupils between fourteen and sixteen years of age. It is not unnatural that, in times such as the present, searchers after reasons for crowded schools and added costs should ascribe the cause to the operation of the Act. The truth is that pupils in expanding numbers were crowding school halls not by reason of official compulsion, which was rarely invoked, but by force of personal choice. The Act did no more than register the judgment of mature public opinion and on the operative side regularize attendance and place it on an efficient working level for the benefit of all who chose to attend.

While Secondary Schools are more happily situated from the point of convenience of attendance than most elementary schools they have their own peculiar difficulties to contend with. Their numbers are not homogeneous since some pupils are within and many outside the domain of compulsory laws. There is an admixture of urban and rural pupils, many of the latter, especially in Continuation and smaller High Schools, drawn from an area less compact than that of elementary schools. Home responsibilities grow with age and encroach more largely upon school time, and, in general, a larger liberty is accorded the adolescent pupil in the interest of self-government. In many cases the restricted accommodation and oversized classes have reacted unfavourably upon a high standard of

1921-1931

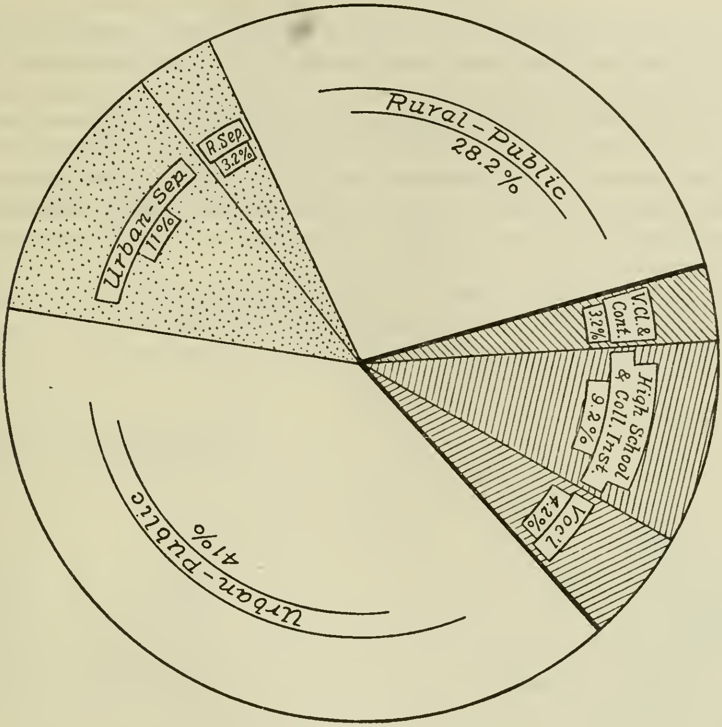

Diagram No. 6

Distribution of Pupils—All Schools—1931

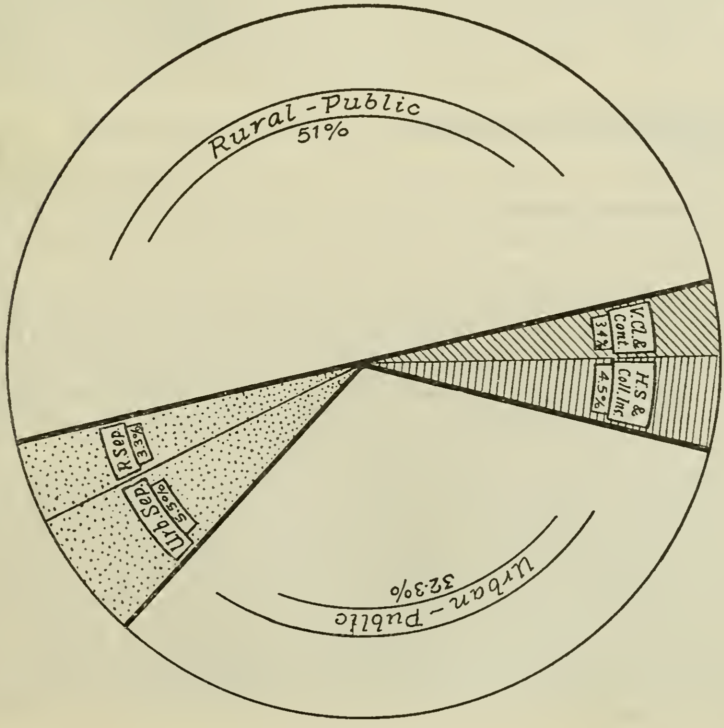

Diagram No. 5

Distribution of Pupils—All Schools—1901

attendance. The diagram shows a fairly uniform movement of attendance, average throughout the period. Vocational schools serve much wider districts than High Schools, and this, as well as diversity of curriculum and the disturbing contact with part-time and special pupils, hampers them in maintaining as high a standard. The percentages are derived from the relation between total enrolment and average attendance. Frequent transfer of pupils to other schools and retirement due to reaching school leaving age unduly augment the total enrolment and correspondingly lower the average. Hence they are false criteria from which to derive attendance standards. Under the new system which it is proposed to install this weakness will be entirely removed.

Diagrams 5 and 6 give a composite view of the distribution of pupils enrolled in all day schools under provincial control for the years 1901 and 1931, respectively. Collection of data shows the following ratios in the various school panels:

	Percentages of Total Enrolment	
	1901	1931
1. Elementary Schools:		
(a) Urban Public	32.3	41
(b) Urban Separate	5.5	11
(c) Rural Public	51	28.2
(d) Rural Separate	3.3	3.2
(e) Fifth Classes	2.4	1.6
All Elementary Schools	94.5	85.0

	Percentage of Total Enrolment	
	1901	1931
2. Secondary Schools:		
(a) High Schools and Collegiate Institutes	4.5	9.2
(b) Vocational	....	4.2
(c) Continuation	1.0	1.6
All Secondary Schools	5.5	15.0

While vocational work was carried on prior to 1921 the system did not get fully under way till that year. Hence it finds a place only in the 1931 diagram. In ten years numbers had reached 46 per cent. of the High School enrolment. Of the total number of children enrolled in the schools of the provincially controlled system, in 1901 one pupil in every seventeen was in Secondary Schools, while in 1931 one pupil in every six was in that panel.

In Elementary Schools the position of urban and rural schools was practically reversed within the thirty-year period. In 1901 they were 37.8 per cent. and 54.3 per cent. respectively; in 1931 the figures had changed to 54 per cent. and 31.4 per cent. The reasons for the shift from rural to urban plurality may be briefly cited as follows: (1) Mechanization of the farm, thus releasing hand labour, (2) Growth of industry and commerce, (3) Migration of farm youth to the west, (4) The lure of urban comforts and social amenities. These conditions are still operative but signs are not lacking of a reversal of the movement owing to economic pressure.

Literacy in Ontario

The standing of the Province from the point of view of the literacy of the population is given below, showing the percentage improvement in the ten-year period 1921-1931. A population unit comprising those over five years is not a fair basis from which to judge of literacy, since the five-year minimum does not allow time in which a school child may acquire the simple arts of reading and writing. But these are the best figures available. A unit representing those eight years of age and over would be a proper basis and would make a still better showing.

Class	Total population over five years		Percentage who can read and write		Average per cent. increase
	1921	1931	1921	1931	
Male	1,328,842	1,592,723	92.32	94.39	1.93
Female	1,303,243	1,531,291	93.67	95.24	1.57
Total	2,632,085	3,124,014	92.99	94.81	1.82

The increase in literacy is worthy of note. The facts are still more impressive when expressed concretely. Over and above the increase in population, due to improved attendance control, 65,967 more persons had acquired at least the working minimum of education in 1931 than in 1921. A valuable sidelight on the achievements of educational endeavour in relation to the reduction of illiteracy in the Province is the fact that while at the opening of the century in 1901, the proportion of the population who were unable to read and write was 10.22 per cent. of the total, in 1931 it was reduced to 5.19 per cent. Ontario to-day leads all provinces in literacy by a substantial margin.

General Effects of the Depression on Attendance

The depression has proven in some ways helpful, in others harmful, in its reaction on school attendance. Industrial stagnation has thrown youth back upon the homes, and the homes in their dilemma, have chosen the only wise alternative of extending their schooling, in preparation for the better days that are to come. As a result, school numbers have multiplied and school accommodation in many cases is overtaxed. This is especially true in Secondary Schools. By way of evidence, there were 8,000 more pupils enrolled in 1931-32 as compared with 1930-31, although the High School Entrance accounted for only 1,700 of this number. This excess of 6,300 pupils is made up largely of readmissions and those who chose to remain longer in school.

Another sidelight on the conditions is shown by the fact that employed adolescents dropped from 4,500 in 1930 to 1,918 in 1931. This change took place mainly in industrial centres where employers preferred to draw their necessary help from the ranks of man-grown and skilled labour, thus setting free immature workers, many of whom returned to school. With occupational outlets closed, part-time workers also fell from 1,668 in 1931 to 1,134 in 1932. Privation of food or clothing or of books and school supplies has been an increasing cause of absence. The "school lunch" has in many cases helped to save the situation, and public relief measures are slowly penetrating to isolated areas where destitution is serious and local organized relief impossible. Undernourishment has its natural counterpart in susceptibility to disease and in many areas ailments mainly of a respiratory nature are prevalent and persistent, to the manifest disadvantage of the schools.

Special Educational Facilities

The Railway School Car and Correspondence Courses are giving ever larger and improved service in their special fields. As is now the case with regular educational institutions, both are taxed to capacity. Where distance, lack of roads and winter handicaps have offered obstacles to regular school attendance and especially where privation accentuates the disability, correspondence courses have been brought into requisition. The School Car is proving a medium through which a helping hand has come to destitute homes in the outposts of settlement, through the co-operation of the School Car Auxiliary of Toronto, which is devoting itself exclusively to that work. With jobbers' camps discontinued and trap lines largely idle, sources of income are closed, but the teacher goes strenuously but cheerfully on his way performing his many-sided tasks for child and home. Educationally, the children are making a splendid response. No child misses a moment of time when the car comes to a halt on its siding. They are 100 per cent. attenders, they master English in a few weeks and cut two years or more from the usual school schedule in attaining High School Entrance standing. The cars are equally good time-savers. Shifting to new points by night or day and disregarding holidays, they often outrun the statutory school year of 200 days in actual teaching service. The parents are profiting by night school work and are pressing into the ranks of Canadian citizenship. Thus the travelling school and lessons by mail are filling a large and necessary place in the educational system, which regular facilities, from the nature of the conditions, cannot possibly fill.

J. B. MacDougall,
Provincial School Attendance Officer.

Toronto, February, 1933.

APPENDIX M

REPORT OF THE INSPECTOR OF PUBLIC LIBRARIES

Official Visits

During the year ending October 31, 1932, 110 libraries were visited by members of this staff. I have been able personally to visit all libraries beyond North Bay since assuming my duties on July 2.

Book Circulation

Book circulation has shown a decided increase throughout the Province owing to diminution or cessation of work in many branches of industry. It is encouraging to note an increasing demand for adult non-fiction. This is partially due to circumstances and partially to the successful diplomacy of alert librarians, interested as much in the quality as in the quantity of the circulation. Statistics of circulation show the following increases:

	Increase in Vol's. in stock	Increase in Circulation
Association Public Libraries	16,711	42,580
Free Public Libraries	47,698	1,624,799
Totals	64,409	1,667,379

Donations From Travelling Libraries

Over 6,000 volumes withdrawn from circulation in the travelling libraries have been donated to various government departments: 600 to the Department of Northern Development for distribution to the Trans-Canada Highway construction camps; 200 to the Department of Education for use at Monteith Northern Academy; 2,700 to the Department of Public Welfare; 2,290 to the Department of Public Health; 150 to the Department of the Provincial Secretary.

Travelling Libraries' Service

For the three months ending October 31, 1932 the issue of travelling libraries was 99 cases; for the year ending at that date 368; for the previous year 305. Several extensions have been effected in this service. Cases of books have now been made available to the lightkeepers on the Great Lakes, of whom 28 received collections during the season of navigation. An attempt has also been made to meet requests from individual readers for specific volumes not otherwise available. If these books are in the travelling library stock, they are mailed and charged to the local public library, or the nearest public library, and the applicants are notified by letter to call there for them. This service is possible only by the co-operation of the various librarians who voluntarily assume the extra labour of accounting with readers outside their regular patronage. A similar service by the combined Legislative and Department of Education Library is restricted to members of the legislature, civil servants, and teachers.

Cases of books are now supplied to all five school cars operating in Northern Ontario, and are being offered also to the more remote schools which are at present without books or the means to procure them, and where the pupils have access to no public library. Statistics covering this service will be available next year.

Ontario Library Review

Publication of this quarterly periodical was resumed with the issue of August, 1932. Copies are furnished every public library and secondary school library in the province. The Minister has approved publication, as a supplement to the *Review*, of *Presentable Plays*, a catalogue of the 800 plays available in the Provincial Dramatic Library established several years ago under the joint auspices of the Ontario Secondary School Teachers' Federation and the Ontario Library Association. A free copy of this catalogue is being furnished to every public or school library applying for it.

Changes in Status

Free Public Libraries:

Two were removed from the list of those receiving grants: Russell, Tilbury.

Three were added: Fort Erie (previously Bridgeburg), Thamesville, Little Current.

Association Public Libraries.

Nine were removed from the list: Craighurst, Hawkesbury, Kinburn, Matilda, Metcalfe, Middleville, Riversdale, Shakespeare, Vankleek Hill.

Four were added: Rednersville, Sheguiandah, Easton's Corners, Bradford.

The following libraries will be struck from the list this year: Admaston, Angus, Duart, Mono Centre, Mono Mills, Pakenham, Trout Creek, Worthington.

Agenda

A great need exists for trained personnel in charge of libraries. On the other hand a number of library-school graduates are without appointments. It would appear that the best means of overcoming this hiatus is the adoption of a scale of grants, based in part on the qualifications of librarians such as obtains in the provincial schools where they are based on teachers' qualifications.

The association of public and school libraries in county systems is at hand. This is but an extension of the principle adopted by the ratepayers of any community in establishing a communal or free library for the local municipality. Obvious advantages are: expert direction, bulk purchases, ever-fresh book collections available by the itinerant system, and enormously increased variety of titles. This service will not be cheaper, but it will be vastly more efficient and satisfying.

Children's work deserves more attention than it receives in many of the smaller libraries where the librarian is overworked. The fact is frequently overlooked that there should be one library assistant for every 25,000 books circulated per annum. It is then possible to organize children's work more efficiently, including regular story hours and preparation of children's book-lists.

General improvement in book-selection is needed. The book-lists of the *Ontario Library Review* furnish a satisfactory basis for large or small purchases, and its articles on special subjects by expert librarians and others will repay careful perusal. Many librarians should pay more scrupulous regard to the keeping of correct records, and should present reports to the board at all regular meetings.

The appended statistical tables cover the period 1931-2.

I wish further to record my appreciation of the loyal and cordial support I have received from the entire staff in the Public Libraries Branch, and of the co-operation of my colleagues in the Department of Education.

F. C. JENNINGS,
Inspector of Public Libraries.

Toronto, January 17th, 1933.

APPENDIX N

REPORT OF THE SUPERINTENDENT OF THE ONTARIO SCHOOL FOR THE BLIND

I have the honour to transmit herewith the Annual Report of the Ontario School for the Blind for the year ended October 31, 1932.

Attendance

The average attendance for the school term ending June, 1932, was 127. At the opening of the school term in September, 1931, 124 pupils were enrolled. During the term, three former pupils returned to school, and three new pupils were admitted, bringing the total attendance for the term up to 130—72 boys and 58 girls. The total registration from October 31st, 1931, to October 31st, 1932, was 156, the same as in the preceding year. School opened in September, 1932, with 119 pupils in residence.

Of the 130 pupils who attended during the year, 81 were from Ontario, 16 from Alberta, 10 from Manitoba, and 23 from Saskatchewan.

Thirty-seven pupils did not return to school in September, 1932—9 girls and 28 boys. Of this number—

20 completed their course.
6 left to continue their studies in High Schools.
2 had too much sight.
2 left on account of ill-health.
1 remained at home for eye treatment.
4 were unsuitable.
2 gave no reasons for not returning.

Changes in Staff

Miss Grace Turnbull, R.N., a graduate of the Brantford General Hospital, was appointed as nurse in the school to fill the vacancy caused by the death of Miss Wright. Mrs. K. Strowger, Knitting Teacher, was absent on account of ill-health during the year, and her duties were taken over temporarily by Miss Agnes MacGillivray, Visitor's Attendant. On January 1st, 1932, Miss E. Scace, for many years associated with the school, first as Girls' Nurse, and later as Matron, resigned from her duties, and Miss M. Milne, Girls' Nurse, became Acting Matron. The latter's duties were taken over by Mrs. I. Miller, acting temporarily as Girls' Nurse. Miss Ruth Taylor, Literary Teacher, resigned in June, 1932, to get married, and Miss Esther Murray of Woodstock was appointed to the vacant position.

Health of Pupils and Staff

Dr. J. A. Marquis, school physician, reports a very busy and strenuous year in the school hospital. In addition to five cases of scarlet fever, nineteen cases of measles, 65 cases of influenza, two accident cases, and other minor ailments, two members of our staff died during the past session.

On December 10th, 1931, Miss Elizabeth Wright, Head Nurse since October, 1916, died from a severe heart attack after only four days' illness. Her death was most keenly felt by both pupils and all members of the staff, as she had rendered faithful and loyal service during the sixteen years since her appointment.

On January 20th a young boy from the west contracted scarlet fever, and was transferred to the Isolation Ward of the Brantford General Hospital. The school was then placed under a quarantine, which lasted off and on until the end of the term. In early February the first of nineteen cases of measles developed, placing our school under a double quarantine. These cases were cared for with great difficulty in our own hospital. We have no adequate facilities for the isolation of contagious diseases. The hospital is on the third floor of the main building, and the space available will accommodate only 14 beds. At this time, the epidemic of influenza which had been prevalent in the city, reached our school, thus increasing our difficulties greatly. Pupils, teachers, maids, and other members of our staff contracted the disease, and at one time there were forty-five patients ill. Of course, we could not accommodate this number, and beds were moved from the dormitory to the boys' playroom, which was fitted up as an emergency hospital room. The boys were cared for there, and the girls who could not be admitted to the hospital, in their own dormitory. In this emergency, it was necessary to engage the services of two extra nurses.

On April 16th a boy was admitted to the hospital with an injured hand, which he had caught in a piece of machinery. On April 26th one of the senior boys, while practising for the Field Day Athletic events, fell and fractured his arm.

On April 29th, Mrs. Emory, a maid employed in the hospital, was admitted as a patient in an unconscious condition. She regained consciousness for a time, but her condition became serious, and a night nurse was engaged to assist in her care. Everything possible was done for her, but she died on May 5th, 1931.

Regular hours for sleeping and eating, daily exercise in the open air, gymnasium work indoors in stormy weather, all tend to develop and strengthen our children's physiques. They are taught to overcome certain habits and mannerisms of blindness, to walk erect with good carriage, and with confidence, to control certain nervous movements of the head and hands, and to behave generally as those with sight.

OCULIST'S REPORT

Dr. Norman Bragg reports the following results from his examination of twenty-five new pupils, fifteen boys, and ten girls:

Condition of Sight

	Male	Female	Total
1. Limited objective vision in both eyes	2	5	7
2. Limited objective vision in one eye	1	2	3
3. Quantitative perception of light in both eyes	5	1	6
4. Perception of light in one eye, none in the other	4	0	4
5. Without perception of light in either eye	3	2	5
Total	15	10	25

The degree of sight found on examination compares favourably with that of other years, there being about the same percentage in the various groups as previously.

Diseases Causing Blindness

	Male	Female	Total
1. Ophthalmia Neonatorum	1	0	1
2. Keratitis	1	0	1
3. Sympathetic Ophthalmia (and injury)	2	0	2
4. Congenital Cataract	2	3	5
5. Retino Choroiditis	0	2	2
6. Myopia	0	1	1
7. Optic Atrophy	6	3	9
8. Buphthalmus	2	1	3
9. Congenital Amblyopia	1	0	1
Total	15	10	25

In this year's class, he found that the condition most responsible for the loss of sight was optic atrophy, some 9 out of 25 cases presenting this ocular defect. The next most serious condition was that of congenital cataract, five cases falling in this group. Buphthalmus was next in order. The remaining 8 cases were divided as the above list indicates.

One pleasing thing to note from the foregoing table is the continued decrease in the number of ophthalmia neonatorum cases coming to the school, a very definite indication of the value of prophylactic care of the eyes of the new born as is adopted in present day obstetrical practice. Another pleasing feature is the small number of sympathetic ophthalmia cases met with, there being only two cases, and he hoped to see the day when this type of preventable blindness would become almost unknown. In congenital cataract the cases are more numerous than in the past year or two, as in buphthalmus.

The usual number of former pupils were re-examined, and suggestions as to treatment, care of the eyes, etc., were made. It was pleasing to note the improvement in the visual acuity of a number of the pupils.

SCHOOL EXAMINATIONS

Literary Work

All our literary classes were examined in June by Mr. W. J. Morrison, Inspector of Public Schools for this district. He makes special reference in his report to one of the greatest problems in schools for the blind—the admission or exclusion of the blind, subnormal child. Where the child's ability to learn is held in some doubt, rather than do him an injustice, he is admitted to our school on trial, until his mentality is established. Such children, of course, even those of thirteen or fourteen years of age, must be started in the kindergarten class, and this greatly hampers the work done there. While the brighter children can advance rapidly, and keep pace with normal children in schools for the seeing, these children of doubtful mentality tend to retard the progress of the class as a whole. It is a serious problem, made more so by the fact that in a residential school such as ours, these children must associate with the others outside of school hours.

Pupils were tested in all subjects, and showed a satisfactory standard for each grade. Mr. Morrison makes complimentary reference to the compositions written in Braille in the Senior Third Class, stating that some of the children showed marked ability in this subject. The High School Class, in charge of Mr. Cole, Assistant Principal, assisted by other teachers in special subjects, provides a course of study similar to that outlined for High Schools. An effort has been made to complete in a year the work of one year of the High School course. This has been largely accomplished, notwithstanding the fact that most of the text books are not procurable in Braille, and much time is required for reading or dictating from the ink copy. Since Mr. Morrison's inspection in 1931, books in Braille added to the library have included several plays of Shakespeare which are of great assistance in teaching English literature.

Fourteen of the seventeen pupils in the entrance class were granted High School certificates. Several of our pupils in this class did not return in September, but remained at home to continue their education in High Schools in their own locality. This is always an advisable course where possible. The blind pupil, of course, must make some extra effort to keep pace with his companions, but in associating with those with sight, and acquiring their outlook upon life, he is preparing to take his place in the seeing world after school days are over.

Examinations in Music

Dr. Albert Ham conducted the musical examinations in practical and theoretical subjects the early part of June. These included tests in Piano, Singing, Organ, Violin, Choral Music, Rudiments, Harmony, History and Counterpoint.

Twenty-three pupils were examined in Piano, six in Singing, three in Organ, and three in Violin, most of whom did excellent work. The theoretical knowledge group, thirty-one pupils in all, proved highly satisfactory in their examination tests, reflecting highest credit on their teacher. Two pupils took the Toronto Conservatory examinations in Primary Theory, and both passed with first-class honours.

The value of the study of music for those without sight cannot be emphasized too much. It may not lead to a means of livelihood—even talented musicians with sight are finding it difficult to commercialize their talent in these days—but it is a study peculiarly adapted to the blind if they are at all gifted in this line. It supplies a soul-satisfying need, and it has a cultural value in rounding out their education. Any child showing an aptitude for music is given an opportunity to study it in our school. It fills many otherwise empty hours with happiness and contentment.

Operetta

Our June Concert in previous years has followed a regular programme of various numbers, illustrating to some extent the work of the school. Musical numbers by the more talented pupils, choral work—always a pleasing feature, short plays generally given by the junior pupils, essays and gymnasium work made up the entertainment.

This year we undertook an entirely new and ambitious form of entertainment, the presentation of a three-act Japanese Operetta, "Princess Ju Ju," by members of the senior choral class. This was done under the direction of Mr. Frederick Lord, our musical director, assisted by the entire staff of music and literary teachers.

Rehearsals were started shortly after the Christmas holidays as it involved a great deal of painstaking, patient practice. For instance, there were three dance numbers in the operetta, which, in their finished form were entirely beautiful and graceful, executed with the assurance of seeing pupils. But to teach blind children, some of whom had never seen, how to dance gracefully was a task indeed, and meant many hours of tiring work for both pupils and teachers. The child could not see the steps practised, and had only her sense of rhythm to guide her. The solos and choruses were comparatively easy to handle; the action of the play was more difficult. How, for instance, would you teach the Princess' lady-in-waiting to cast coy glances behind her fan when she had never seen a coy glance? How could the Emperor be taught a comedy dance step when he had never seen a dance step of any kind, either humorous or serious? But the interest of both pupils and teachers was aroused, and there was a certain thrill of achievement in overcoming each difficulty as it presented itself. Most of the costumes were made by the pupils, under the supervision of the teachers.

One of the greatest difficulties was in adapting the stage—which was wholly inadequate—to our purposes. When the present platform was built in our assembly hall, it was not thought that children in a school for the blind could undertake such an ambitious form of entertainment, and no provision was made for it. There are no entrances from the stage to the dressing rooms, and consequently the entire caste of forty children had to be in costume and behind the curtain about an hour before the start of the performance.

The operetta was given six times in all. On two evenings, special invitations were sent to a group of teachers from Toronto who wished to visit the school, and to members of service clubs in the city who had entertained our children at various times. At the last two presentations which were open to the general public, hundreds were turned away, unable to get seats. The performance was a decided artistic success, and much publicity was given to the excellence of it by the press both here in the city and in Toronto. Mr. Lord, his staff of assistants, and the pupils themselves deserve the highest praise for carrying out so excellently such a programme.

Manual Training Department

Manual Training necessarily plays a more important part in our school than in the schools for the seeing, because a smaller proportion of our graduates is absorbed into professional life. Naturally, as a boy approaches young manhood his strong desire is to acquire mastery of some means of making a livelihood.

Chair caning, basketry and furniture making have therefore always had a conspicuous place on our programme, and both because of their educational values, and because hand work has always had a certain quality that a factory made article lacks, we hope to continue this sort of work indefinitely. One innovation in this Department which has been a great success has been the making of handsome, durable door mats from discarded automobile tires.

But we live in a changing world, where the factory has largely displaced hand work, and in an endeavour to meet that change we have equipped a room set aside for the purpose, with bins and work benches which conform in every particular with those in factories, and have laid in a supply of parts belonging to several modern assembly processes. Here the students have definite training in the assembling of parts such as the coupling of nuts and bolts, the fitting together of the parts of a hinge, or the piecing together of the various parts of a lock. The boys keep their own assembly records, and at the end of a month they are given a supervised test, and if they have achieved the production rate of the factory concerned, they are advanced to the next test. These tests will enable the placement officers in the Canadian National Institute for the Blind to determine the ability of a given student for a given factory position, and will solve the problem of a future living wage for at least some of our graduates.

The results so far achieved are encouraging. The pupils seem more alert and ambitious to work. They have a subject of conversation which is of general interest; they vie with each other to excel, and above all they feel that here at least is something of practical preparation for their future life in the outside world.

Prizes and Scholarships

The St. Dunstan's Chapter of the I.O.D.E. of Toronto has on several occasions provided a scholarship of a year's tuition at the Toronto Conservatory of Music to talented blind students. We are careful to recommend for this scholarship only those pupils showing marked musical ability, who we feel will benefit by this training. This year, after due consideration, this scholarship was granted to Miss Ella Koch of Regina, Sask., whom our Musical Director feels to be the most talented piano student who has yet come under his tutelage in the Ontario School for the Blind. This young girl is now at the Conservatory in Toronto.

The Ethel Charlton Memorial Prize of $75.00 awarded for two years to girls was this year, with the consent of the donor, divided between a boy and a girl in the graduating class, Pauline Butler of Toronto, Ont., and Jackson McPherson of Regina, Sask., as they were thought to be equally deserving. These two pupils were also winners of the Louis Braille Proficiency Trophy for Girls, and the Irene Wettlaufer Efficiency Trophy for Boys. Prizes and trophies were presented at the June Concert, as were also silver cups won by both girls and boys at the Field Day Competition in the senior, junior, and intermediate groups.

UNIFORM BRAILLE AT LAST

On July 18th and 19th, 1932, a joint conference was held in London, England, regarding the adoption of a uniform system of Braille which marked the end of a half century of discussion and conferences on the subject which seemed to lead nowhere. At this meeting, the English and American conferees arrived at complete agreement on the subject, and from now on a standard code will be used in the publication of all Braille books throughout the English speaking world.

It is impossible to over estimate the importance of this step, affecting as it does about 150,000 blind people. It will double the amount of reading material available, besides putting an end to the wasteful duplication of editions of the same book in Great Britain and the United States. The cost of publication will, of course, be greatly reduced. Those responsible for bringing about the adoption of this standard system have rendered a great service to all English-speaking blind people.

ALUMNI MEETING IN JUNE

To celebrate the 60th anniversary of the founding of the Ontario School for the Blind, 150 former pupils held their biennial convention at the school, after the close of the session in June. Mr. Rixon Rafter, B.A., of Queen's University, and now editor and proprietor of the Arthur News-Enterprise, presided, and the programme presented was full of interest and variety. After Mr. Rafter's own fine address of welcome in which he enlarged on the value of friendship, there were other worth-while talks, particularly those of Mr. W. G. Raymond, ex-M.P., one of the earliest graduates of the school, and Mr. George MacArthur, a graduate of the school, now the successful head of the real estate firm of MacArthur and Company of Toronto. An outstanding feature of the programme was a concert selection presented by six former students, each representing a decade of the school's history. Another interesting incident was the presentation of a bouquet of roses to Miss Mary Graham, a member of the first class in 1872 by Miss Mary Dixon, a member of the last class of 1932.

We who have sight can have no real idea of what these reunions mean to our former pupils. Perhaps only the blind can fully appreciate the problems of the blind, the sense of isolation many of them must feel in after school life, the feeling that there is no place for them in the world of the seeing, that they are merely a care and a burden. To meet old friends again, to re-live the care-free school days, to renew acquaintance with those who can understand and sympathize with their own particular problems must bring to them a renewed feeling of hope and courage for the future.

BURSAR'S REPORT

Maintenance expenditure for the year ending October 31, 1931	$94,656 76
Maintenance expenditure for the year ending October 31, 1932	85,824 02
Expenditure for the year ending October 31, 1931	$94,656 76
Less amount returned to Department as Casual Revenue	24,377 88
Actual cost, maintenance and salaries, year ending October 31, 1931	$70,278 88
Expenditure for the year ending October 31, 1932	$85,824 02
Less amount returned to Department as Casual Revenue	23,798 08

Average attendance for year ending October 31, 1931	130
Average cost to Department, per capita, year ending October 31, 1931	$540 60
Average attendance for year ending October 31, 1932	127
Average cost to Department, per capita, year ending October 31, 1932	$488 39

W. B. RACE,
Superintendent.

Brantford, Ontario.

APPENDIX O

REPORT OF THE SUPERINTENDENT OF THE ONTARIO SCHOOL FOR THE DEAF

I have the honour to submit the 62nd Annual Report of the Ontario School for the Deaf for the year ending October 31st, 1932.

Attendance

In former years the attendance record covered the fiscal year from November 1st to October 31st. This caused overlapping and confusion, as this term did not correspond with the school year. In this report, the figures given are for the academic year and the comparisons made with the former year also cover the same period.

In the year 1930-31 the enrolment was 320 and the average 306.

In the year 1931-32 the enrolment was 348 and the average attendance 336.

The increase in enrolment was therefore 28 and in average attendance 30.

The attendance continues to increase, but there are yet at least 200 children scattered throughout the Province, who are too deaf to be educated in the ordinary public school. These children make no progress until they enter this school, and it is very humiliating for children of 12 years or more to have to associate with little tots of 5 or 6 years. Efforts are being made to enlighten and interest the parents of these children in the work of the school. We again have to thank the various newspapers, magazines, school inspectors, teachers, attendance officers and others for their active interest in making our school known to the people of the Province.

Buildings and Equipment

My remarks of last year, with but few modifications, will apply again this year.

The congestion in the boys' residence is more aggravated. There are 192 boys crowded into dormitories which are intended for 140. It has been necessary to use the play rooms and the study rooms for bed rooms. The boys must therefore play either in the corridors, where there is great danger of them injuring one another, or in the basement which is unsuitable and not furnished for the purpose.

There is also great need for cupboards for storing clothing in order that the suits and overcoats may be hung up instead of being piled on the floors or on racks in the dormitories.

In the girls' residence there are 156 girls—20 more than the space provided.

An amplifier, which we have designated the Livingston Amplifier, constructed by Mr. Elmer Livingston, Chief Electrician of the Public Works Department, was installed near the end of the term and is proving of considerable assistance in the teaching of children of all degrees of deafness. The vibrations produced appear to stimulate even those who might be described as totally deaf.

In order to prevent reverberation, when using the amplifier, the room has been draped with heavy pleated velour. This serves as an excellent absorbent of sound and eliminates echoes.

Mr. Livingston is taking a great deal of interest in this phase of our work and is doing considerable research along this line. He hopes to have a much improved instrument ready to install early in the New Year.

We are hoping to have a portable amplifier, which could be used with the piano or other musical instruments, so that pupils may secure a better appreciation of the quality of sound and of music.

We have also been experimenting with a "Vibravox," constructed by Professor Bedell of Cornell University, as to the possibilities of "bone" conduction.

The use of the pianos in voice building, voice training, physical exercises and rhythm has been improved and extended. As a result, we are getting a use of speech and language that was not thought possible a few years ago.

Changes In and Additions to the Staff

In order to teach efficiently the increased numbers, it was found necessary to add three teachers to the staff. Miss Marjorie Ketcheson, Miss Vera Sheffield and Miss Doris Matthews of Belleville were appointed and assumed their duties in January. All three had more than five years' successful experience and were highly recommended.

In February, the last of the veteran teachers of the school, Mr. W. J. Campbell, reached the three-score and ten years and was placed on the retired list. In order that there should be no break in the work in the midst of the term, the Department consented to continue his services until the end of June.

Mr. Campbell has always been a faithful, conscientious teacher and was connected with this school for nearly forty years. We miss his wise counsel and genial companionship and trust he may long be spared to enjoy his well-earned rest.

In January our baker, J. N. Boyd, was removed by death, after a period in the service of twenty-five years, and the position was filled by the appointment of an experienced baker, George Gibson.

In February the engineer, C. J. Peppin, and in June the fireman, Edward Doran, having reached the age limit, were superannuated and their places filled by the appointments of F. H. Chesher and M. Crosby.

Entertainments

In December, the pupils gave an entertainment in the auditorium of the Collegiate Institute, which excelled in quality anything that had ever been previously attempted. The hall, which seats nearly 1,100, was filled for the evening performance and was nearly filled for the matinee on the following afternoon. A few months later, the "play" in which 156 pupils took part was staged before a crowded house in the town of Trenton. Events of this nature have a very high educational value and help to develop the social side of the pupils' lives.

In January, the Association of Teachers and Instructors of the Ontario School for the Deaf entertained their friends at a banquet in the Assembly Hall. The Hon. W. G. Martin, Minister of Public Welfare, was the guest speaker. After a bountiful repast a number of demonstrations were given by the pupils, after which the teachers and visitors were given a very interesting and instructive address by the speaker of the evening on the various phases of the work of his Department.

Visitors

We continue to be favoured by having visitors from far and wide, who are becoming interested in the Education of the Deaf and their future success in life. Among these may be noted The Honourable R. B. Bennett, The Honourable Hugh Guthrie, The Honourable Martin Burrell and the Members of the Dominion Parliament and the Legislature from this district. We are always pleased to receive interested visitors, as it gives us an opportunity to enlighten them on the possibilities of the deaf as a class. It is no exaggeration to state that 90 per cent. of the people of Ontario are entirely ignorant of the fact that the Deaf are not Dumb and can be taught to use the vocal organs in the production of intelligible speech.

Teachers' Association

The teachers and instructors have organized an association, which meets regularly once a month for a general discussion of their work and its problems and once for a social function. They have also selected a reading course and spend two half-hour periods a week in studying and discussing topics bearing directly on the teaching.

In the summer of 1931 twenty members of the staff attended the convention in Winnipeg of the American Association of Teachers of the Deaf, one teacher took the summer course in Johns Hopkins University at Baltimore and two took the course for Auxiliary Classes in Toronto. One teacher also obtained six months' leave of absence and completed the training course in Manual Training at the Ontario Training College for Technical Teachers at Hamilton. Our Directress attended the convention of Progressive Oral Advocates at Cincinnati and also visited Detroit schools on the way. In this way, the teachers are keeping constantly in touch with what is being done to improve the methods of teaching the deaf. In June, 1933, an International Congress will be held at Trenton, N.J. All the organizations of America have united to make this meeting a success. Several of the most noted teachers and instructors from Great Britain, Europe, South Africa and Australia have signified their intention of being present.

Following this conference a Summer School, lasting five weeks, will be conducted by the University of Chicago. Several of our teachers are planning to take this course, which is under the direction of the American Association to promote the Teaching of Speech to the Deaf.

Library

Our supply of books for silent and supplementary reading has been increased to meet the needs of all grades of pupils.

Vocational Work

There is great need for better buildings and equipment for the vocational work.

In the print shop we need a linotype if the pupils are to get the training to fit them to enter the commercial field.

In the carpenter shop and wood-working shop much more could be done if we had an up-to-date building and proper equipment.

The sewing and dressmaking department requires an additional instructress to allow sufficient time to give efficient instruction and take care of the repair work of the school.

Health

Although the vigilanceof the supervisors and teachers was continued and, through the Junior Red Cross, was extended, yet an epidemic of diphtheria and also of scarlet fever broke out during the winter.

An appeal was made to the Provincial Department of Health and, with the aid of their staff, all the pupils were immunized against both these diseases. Fortunately none of the cases proved fatal. In the future, we plan to have all pupils treated with the toxoid and serum soon after they are registered. In this way we hope to prevent any epidemics of these diseases in future.

A physical examination has revealed that about seventy-five of the children have adenoids or diseased tonsils, which render them subject to many diseases of the throat and lungs. I believe that if these could be removed, there would be a vast improvement in the health and progress of these children.

Cost of School

Although there is an increase of thirty pupils requiring three additional teachers and the additional equipment necessary in fitting up the class-rooms and dormitories, the cost in 1931-32 is less than for the previous year. In comparison with schools of similar size throughout the continent, we find the cost of maintenance is the lowest per pupil in attendance.

Refrigeration

I would again call attention to the fact that we have no effective refrigeration system. As a result it is necessary to buy all perishable food in small quantities. This, of course, considerably increases the cost and lowers the quality of the food as well.

The only system that will be satisfactory is one of electric refrigeration. No other institution, where more than 400 pupils are fed daily, is without such a necessity.

Recommendations

1. The construction of a complete unit, so that the younger children may be separated from the older ones. This unit would consist of a central school building surrounded by residences containing everything required in the way of equipment, dining-room and play-rooms, so that they would be kept apart from the larger pupils.
2. An up-to-date vocational building with modern equipment.
3. A gymnasium and swimming-pool combined.
4. A system of electric refrigeration.

The Bursar's statement of expenditure, the report of the Public School Inspector and the Physician's report are appended.

H. B. Fetterly,
Superintendent.

Belleville, November 1st, 1932.

Officers of the School

H. B. Fetterly, M.A.	Superintendent and Principal
C. D. McGuire	Bursar
W. W. Boyce, M.D.	Physician
J. Chant, M.D.	Aurist and Oculist
Mrs. H. MacCluggage	Dietitian-Housekeeper
Miss K. Bawden	Secretary and Stenographer
Miss M. Allison	Trained Nurse

Teachers

Miss Catherine Ford.................................Directress of Professional Training

Supervising Teachers:

- W. J. Campbell—until July 1st
- Miss Elizabeth Deannard.
- E. B. Lally.
- C. Ellis.
- M. S. Blanchard, B.A.

Teachers:

- Miss V. Handley.
- Miss. E. Nurse.
- Miss L. Carroll.
- Miss E. Panter, B.A.
- Miss B. Rierdon.
- Mrs. P. Blanchard.
- S. A. Gordon.
- Miss F. M. Bell.
- Miss C. O'Connell.
- Mrs. A. Wannamaker.
- Miss M. Benedict.
- Miss M. Code.
- Miss M. Hegle.
- Miss M. Lally.
- Miss R. Van Allen.
- Miss G. Burt.
- Miss G. Rathbun.
- Miss G. Perry.
- F. P. Cunningham.
- A. J. Clare.
- Miss M. Totten.
- Miss N. Tett.
- Miss A. Sweetnam.
- Miss H. Keeler.
- Miss M. Ketcheson
- Miss V. Sheffield
- Miss D. Matthews

Miss M. I. Cass.................................Teacher of Art

Vocational:

Miss K. B. Daly, B.A.	Teacher of Household Science
A. C. Stratton	Teacher of Manual Training
Mrs. M. Glenn	Teacher of Sewing
L. Morrison	Teacher of Printing
T. O'Hara	Teacher of Carpentry
T. Truman	Teacher of Shoemaking
J. N. Boyd (until January 1st)	Baker
G. Gibson	Baker

LITERARY EXAMINER'S REPORT

Dear Sir:

My annual inspection of the Literary Classes at your school, having been completed last week for the current school year, in accordance with my instructions from the Minister of Education, I am herewith submitting for your consideration, a brief statement of my observations.

When I first inspected this school, twenty-four years ago, it required just five days to make the inspection. The growth in the school is seen in the fact that this inspection occupied fifteen days. As you know, I divided this time so as to make two complete inspections, one in early December and the other just completed last week. I visited each class twice, and should therefore be in a position to judge not only of the regular class teaching, but of the progress made in three months. This mode of inspection approximates as nearly as possible to the inspection of any other Public School. In my opinion this is much better than spending the same amount of time in one inspection, remaining for a longer period with each class.

Knowing as I did of the very serious interruption to your work, due to various forms of illness since the first of the year, I came to the school fully expecting to find the classes little, if any, advanced from where they were in December. In this I was most agreeably disappointed, for had I been unaware of the interruption, I should scarcely have noticed it in the condition of the classes particularly in the brighter classes. They are practically as far on in the prescribed course as we would expect them to be at this time. This reflects very favourably on both teacher and taught. I would like just here to offer them my congratulations on what they have accomplished against adverse conditions for practically every class was seriously interrupted during the epidemic. From what I saw, barring further illness, I expect that by the close of the term, the prescribed work will be pretty well in hand, in all or nearly all of the classes. You have an efficient staff of teachers, and while some would be graded as superior teachers, and others as good teachers, I do not consider that you have any that should be graded as poor teachers. In fact if there were any in this catagory they would be useless in a school like yours. Only successful teachers are of any use to you. I was particularly impressed with the fine spirit of co-operation that exists among the members of the staff, and the confidence that all place in Miss Ford, who is at the head of your teaching staff. You are indeed fortunate to have the benefit of her training and experience as a successful teacher of the deaf. Her untiring efforts of years are now showing substantial results.

I am heartily in accord with the idea of placing together in classes pupils of similar abilities. It is a matter of common knowledge, that all children cannot advance with equal pace, and to attempt to make them do so is torture to the slow child, and ruinous to the brighter one, for you cannot meet the two conditions at once. In my last report I recommended for those of slower mentality, a minimum of literary work and a maximum of handwork, and I would repeat that recommendation. I am fully convinced that you have a number of pupils here who will profit very little from further literary instruction, but who might profit considerably from some form of vocational training. I seriously question the wisdom of advancing some of them beyond the Primary Department in literary work. Since they are slow thinkers, it will require much more time for them to acquire what is available in the "shops" than it will those with greater mentality. Conversely the brighter children can acquire all that you want them to acquire in "shops" in a much shorter time. This would give these brighter children, who can profit by literary instruction, more time in such classes. But probably, I am not expected to make these suggestions. If so, forget them.

It is a matter of great personal satisfaction to me, to note from year to year the development of this school, which I have seen grow from an "Institution for the Deaf and Dumb" into a real "School for the Deaf." I have not the slightest doubt but that the more rapid progress in recent years is in a very large degree due to the extensive and growing use that is made of "Silent Reading." I believe I am well within the fact in saying that it is my judgment based on long experience in this school, that the children who complete the Primary Department to-day, can get far more from the printed page than could the graduates from the Senior Department of a few years ago; that they have more real education than the graduates of twenty years ago. Another factor that has contributed largely to this progress is the rhythm work. Even though I have seen this work from its inception here, it is still marvellous to me, that so much is accomplished with these children who cannot hear. To one not familiar with the school, it is little short of miraculous. To tell one of these strangers to the school that some of these children can sing, would be treated as a joke, but we know that they do sing, while their other rhythmic exercises would do credit to any hearing class. That play that the school put on in the auditorium of Belleville C.I. in December was something worthy of the highest commendation. Something beyond the belief of those who did not witness it. Something that would only be attempted by those who had a vision of what a deaf child can do.

A few years ago, when I reported on my inspections, I made special mention of the work in "Lip Reading." To-day this branch of your work has advanced to the point where we take it as a matter of course, that they will lip-read, and we are seldom disappointed. The school has reached a degree of proficiency in this important phase of their training, that unquestionably most of the children can follow the remarks, even of a stranger, if the stranger is sufficiently interested to speak slowly and distinctly to them. This will be invaluable to them in later life, when they have left the school where all their associates are deaf, and mingle with people who hear. Miss Deannard very kindly gave me a private demonstration of what can be done along this line in a short time. She allowed me to see her at work with John Illingworth who has been at school for a few weeks only. I never saw anything to equal what he has accomplished in the time. He repeated without an error, sentence after sentence and many of them of considerable length, without a mistake. He was also able to read my lips without difficulty, although he had never seen me before.

I made a careful inspection of the subjects of Group 1, High School Entrance, and found it satisfactory. I am therefore approving of that group for such of the Entrance Class, as may attain to Entrance standard in Group II, and from what I saw of this class, I should say that several of them will qualify for High School Entrance Certificates in June.

For the past two or three years, the High School Class has been inspected by the High School Inspector while he was in Belleville, visiting the Collegiate Institute, but this year it was transferred to me. I did not see a great deal of their work from the fact that on the day I reached that class, they were writing on examinations. But Mr. Blanchard showed me a very satisfactory lesson in Elementary Science. The students individually performed an experiment in Specific Gravity where accuracy was an important factor, and the results were good. They have evidently been carefully taught.

I was pleased to note the expansion in the use of the Radio Ear. The benefits from this piece of apparatus from the teaching point of view are unquestioned now, but aside from any such benefit, it adds greatly to the enjoyment of life by these children who are otherwise shut out entirely from the pleasures we derive from our sense of hearing. You can see the joy in their faces when they actually hear.

From what I gathered during my visits, you are expecting a much larger attendance in September. Just what you will do with them is a serious problem to solve. I understand that your dormitory accommodations are taxed to their limit, as is also the school room accommodation. If the money was available for the new buildings discussed with the Deputy Minister of Education in the autumn, the problem would be simple, but as far as I have learned, it is not available at this time, and just what you can do in the autumn is difficult to say, but I suppose you have some solution in mind.

I should like to repeat my recommendations of a year ago, in order to keep them before the Department, if for no other reason: (1) That a new building be provided for Vocational Classes with a qualified supervisor for that Department, fully responsible to the Superintendent. (2) A class in Baking. (3) That for pupils who have gone as far as is profitable in literary studies, a minimum of literary instruction be given and a maximum of Vocational Training. (4) That the work in scientific Agriculture be extended. (5) That every vocational lesson be a language lesson as far as circumstances will permit.

In conclusion let me compliment you and your staff of instructors on the quality of the work you are doing for that part of our population who are handicapped by the lack of hearing. You are doing a great work and are justly entitled to the appreciation of the Department of Education and to the gratitude of those to whom you are so ably ministering. I wish also to express my thanks to you and to each member of the staff and the official with whom I came in contact during my inspection, for the kindnesses shown, and the frank and ready way in which I was supplied with any information for which I asked. It made me feel that no person had anything to hide, and that all welcomed inspection and suggestion. It made my duties much lighter and certainly more pleasant. I wish you continued success in your work.

Yours respectfully,

H. J. Clarke,
Public School Inspector.

PHYSICIAN'S REPORT

I beg to report on the health conditions for the Ontario School for the Deaf for the term 1931-32.

In the latter part of October, 1931, whooping-cough broke out. We had eighteen cases. All children, not previously having had the disease, were inoculated with serum three times at regular intervals. In January, 1932, there was an epidemic of measles, lasting until about February 15th, moderately severe and complicated with pneumonia in nine cases. In all we had about seventy cases. While some patients with measles were convalescing, diphtheria broke out. All children of the school were Scheik Tested to determine immunity and two hundred and sixty-seven were found to be susceptible to the disease. They were given temporary immunity by antitoxin and afterward permanent immunity by three doses of toxoid. Swabs were taken from all throats to find if any "carriers" were present. We found ten cases. There were about twelve cases of diphtheria, some severe. About the middle of April, scarlet fever broke out in the school. All children, who had never suffered with the disease, were Dick Tested for immunity. It was found there were fifty-eight who were susceptible. They were each given three doses of scarlet fever toxoid.

Besides the infections above enumerated, we had chicken pox and the seasonal epidemic of influenza, also the following: appendectory, 1; tracheotomy for diptheria, 1; rheumatism, 5; a number of cases of digestive disorders and middle ear trouble, also injuries, wounds and contusions, about the average. Other sickness of less importance occurred from time to time. There were no deaths.

At the end of the term, the children were returned home in good health.

Yours respectfully,

W. W. Boyce,
Physician.

November 1st, 1932.

‡Percentage of actual aggregate to perfect aggregate attendance. For the years 1930 and 1931, the form classification is based on the enrolment on the last school day in May.

In arriving at the possible aggregate, all the school days for the term of a pupil of non-compulsory age, and all the school days of a child of compulsory age, are counted, except in case of illness, properly certified, or of exemptions allowed by law, so long as he is a resident of the school section or until he is registered in a secondary school.

Duplications of enrolment in elementary schools owing to removals from one elementary school to another during the year, or owing to transfer to secondary schools, are carefully avoided in this calculation.

The percentage of average attendance to total enrolment, viz., 75.20, is low owing to the fact that a pupil once entered on the roll, if only for a few days, is counted in the enrolment for the year. The percentage of actual to perfect aggregate attendance (90.81) as given above, represents correctly the situation as regards regularity of attendance in the elementary schools.

III. PROTESTANT SEPARATE SCHOOLS

The following is a complete list of the Protestant Separate Schools of the Province:—No. 1 Grattan, No. 2 Hagarty, L'Orignal, and Penetanguishene (two schools).

They were attended by 260 pupils in 1931. The whole amount expended for their maintenance and permanent improvements was $13,960.40. There were nine teachers of whom eight held Second Class certificates, and one held a First.

Population is Dominion census figure. High Schools include Collegiate Institutes. ‡Taxes collected for School Boards. *Less Legislative grants.

All Elementary School figures, also Secondary School financial figures cover the calendar year specified. Other Secondary School figures cover the school year ended 6 months after the calendar year specified.

Commencing with 1930 the enrolment figures are for the last school day in May. Previous to this the figures cover the entire year.

§ Of the grand total 23,213, there were 199 Vocational Day Teachers who also taught in High Schools and 991 Evening Vocational Teachers who also taught in Day Vocational Schools.

SUMMARY

Enrolment, Senior Fourth Grade on the last school day in May, 1932		54,757
Number of High School Entrance Candidates:		
Recommended by Principal on Group II	19,114	
Number taking written test on Group II	31,166	
		50,280
High School Entrance candidate percentage of 1932 Senior Fourth Enrolment		91.82%
Number of candidates successful on written test on Goup II:		
By Regulation 11—(1) and (2)	19,809	
(3) and (4)	1,074	
(5)	449	
(6)	272	
		21,604
Total number of successful candidates		40,718
Percentage of all candidates who were successful		80.98%

(38.01% by Principal's recommendation and 42.96% by passing written test).

Classification of Students by Subjects of Study

I. Architecture, Machine Drawing and Design:

Mechanical Drawing	831
Architectural Drawing	746
Structural Steel Design and Concrete	21
Sheet Metal Drawing	108
Estimating	20
Plumbers Drafting	17
Electrical Drawing	31
Furniture Drawing	20
Machine Drawing and Design	242

II. Art and Design:

Lettering and Showcards	811
Elementary Art	230
Colour Study	498
Illustrating	154
Industrial Design	174
Modelling	81
Drawing from Still Life	168
Drawing from Life	219
Drawing from the Antique	201
Costume Drawing and Design	163
Basketry	16
Pottery	74
Woodcarving	111
China Design	35
Interior Decorating	445
Art Metal Work	17
Leather Work	53
Batik	22
Painting and Decorating	92
Anatomy	65
Freehand Drawing	23
Commercial Art	52
Perspective	83
Design for Painters and Decorators	26
Signs	14
Etching	10
Crafts	20
Reed Work	12

III. Physics and Electricity:

Electricity	1,005
Telephony	114
Telegraphy	45
General Physics	11
Applied Mechanics	99
Radio	431

IV. Chemistry and Geology:

Mineralogy	11
Chemistry I	419
Chemistry for Nurses	100
Industrial Chemistry	185
Geography	67
Photography	66
Science of Paper Making	15

V. Mathematics:

Shop Mathematics	633
Arithmetic	1,694
Algebra	550
Geometry	408
Trigonometry	179
Surveying and Mapping	15

VI. Engineering:

Stationary Engineering	58
Aircraft Mechanics	199
Steam Engineering	296
Power Plant Operation	203
Navigation	36

VII. Shop Work:

General Woodworking	486
Carpentry and Building Construction	101
Joinery and Cabinet Making	281
Plumbing	166
Machine Shop Practice	975
Acetylene Welding	736
Auto Mechanics	2,046
Brick Work	16
Blue Print Reading	20
Forge Work	23
Pattern Making	13
Watchmaking	50
Electric Wiring	606
Shoe Machine Work	20
Painting and Decorating	92
Steel Square	16
Slide Rule	7
Armature Winding	22
Automotive Electricity	11
Boat Building	12
Locomotive Airbrakes	12

VIII. Domestic Science:

Cooking	3,641
Housekeeping	27
Home Economics	467
Home Nursing	553
Hygiene and Dietetics	336
Laundry	15

IX. Domestic Art:

Sewing and Dressmaking	5,285
Embroidery and Lacemaking	569
Millinery	423
Drafting and Design	306
Power Machine Operating	174
Textiles	13
Hosiery Mending	13

X. Commercial Work:

Penmanship	1,792
Typewriting	7,438
Stenography	5,879
Bookkeeping	2,992
Commercial Law	289
Commercial French	136
Commercial Arithmetic	98
Business Correspondence	1,147
Office Routine	429
Business Machines	722
Economics	131
Salesmanship	339
Accountancy	39
Advertising	169
Rapid Calculation	301
Business Finance	83
Filing	60
Business English	119

Classification of Students by Subjects of Study

X. Commercial Work:—*Continued*

Commercial Geography	28
Banking and Exchange	12
Insurance	62
Foreign Trade	145

XI. Printing and Bookbinding:

Printing	264

XII. English:

Dramatic Literature	29
Elementary English	2,930
Public Speaking	181
History and Civics	159

XII. English:—*Continued*

Lip Reading	39
English for Non-English Speaking Persons	2,142
Current Events	10

XIII. Foreign Languages:

French	1,177

UNIVERSITY OF TORONTO

REPORT
OF THE
BOARD OF GOVERNORS
FOR THE
YEAR ENDED 30th JUNE
1932

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO

UNIVERSITY OF TORONTO

REPORT

OF THE

BOARD OF GOVERNORS

FOR THE YEAR ENDED 30TH JUNE, 1932

To His Honour the Lieutenant-Governor in Council:

The Governors of the University of Toronto have the honour to submit their Twenty-sixth Annual Report, including the President's review of the academic work of the University and its Colleges for the Session 1931-32 and the reports of various officers and departments. There are appended also the usual statements of funds and assets, including investments, as they stood on 30th June, 1932, and statements in detail of the receipts and expenditures of the Board for the fiscal year which ended on that date, with the certificate of audit by Mr. G. T. Clarkson, of Messrs. Clarkson, Gordon, Dilworth, Guilfoyle and Nash, attached.

It will be observed that the auditor reports that all transactions of the year on both Revenue Account and Capital Account have been duly audited and found correct; that the securities representing the investments, which are deposited for safe-keeping in the vaults of the Canadian Bank of Commerce, were produced by the bank for his examination and were found to be in agreement with the Bursar's records; and that these records are well kept and all endowment and trust funds properly accounted for.

During the year the construction of the new Botanical Building proceeded rapidly and the formal opening took place in June. To 30th June there had been expended on this building and its equipment $468,614 from the grant of $517,000 made by Your Honour in Council for the purpose, and the balance will be absorbed with the closing of the contractors' accounts this year. Other expenditures in 1931-32 on buildings or extensions begun in the previous year included $135,988 in completion of the addition to the Ontario College of Education; $30,340 on the addition to the Mill Building; $30,371 on the South Wing and $149,219 on the North Wing of the additions to the Hygiene Building; and $159,251 on the completion of the University College Women's Residence, Whitney Hall. As stated in last year's report the cost of erection of this residence has been defrayed from the bequest of the late E. C. Whitney.

The general revenue of the year amounted to $1,507,519, and in addition there was credited the Special Legislative Grant of $1,200,000, making a total gross income of $2,707,519. From this sum there falls to be deducted $56,882 for interest written to certain scholarship and trust funds, leaving available for expenditure under the appropriations for salaries and maintenance $2,650,637.

The expenditure under these appropriations (exclusive of the Ontario College of Education, which is maintained by a separate vote) totalled $2,867,947. This sum exceeded the available income by $217,310, although every effort was made to reduce expenditures, including the putting into effect of a temporary reduction in the salaries of the staff from 1st March, on a graded scale similar to that at present in force in the Civil Service of the province. Reference should, however, be made to the fact that when the estimates for the year were drawn up and issued the Board expected to receive from the Legislature a grant of $1,418,034, as shown in the revenue statement, whereas the actual vote subsequently passed was $1,200,000.

The difference of $217,310 has been charged to the Special Contingent Fund created from favourable balances of former years. This fund, standing at $355,191, was thereby reduced to $137,881, and this remainder will be required to supplement the revenue of the current year.

All of which is respectfully submitted.

H. J. Cody,
Chairman of the Board
during the year 1931-32.

Toronto, 29th November, 1932.

PRESIDENT'S REPORT

1931-1932

To the Governors of the University of Toronto:

GENTLEMEN:

I beg to submit the following report on the academic work of the University and University College during the twelve months ended June 30th, 1932.

The total staff of the University and University College numbered 826, of whom 105 were professors, 76 associate professors, 63 assistant professors, 206 lecturers, associates (in medicine and dentistry) and instructors in the College of Education, two directors, one director of field work, 373 demonstrators, fellows and instructors with sessional appointments.

The total number of students in attendance was 8,088, of whom 5,099 were men and 2,989 were women, 7,653 being registered in the colleges and faculties, and 435 in the departments. The number of students proceeding to degrees was 6,399, and to diplomas 801.

It is with regret that I record the deaths of several members of the staff, retired and on active service: Dr. James Brebner, a name that will long be honoured in the University; Dr. J. A. Craig, a scholar who retired some years ago; W. S. Guest, assistant professor of electrical engineering, who was sympathetically remembered by his colleagues during several years of impaired health; and Dr. J. W. Macmillan, of the staff of Social Science, and professor in Victoria College, whose useful life in the height of its power was suddenly cut off, to the sorrow of his associates in the University.

The following resigned their positions:

John Cunningham McLennan, Ph.D., D.Sc., LL.D., professor of physics and Dean of the School of Graduate Studies; Walter Earl Willmott, D.D.S., associate professor of prosthetic dentistry; Barker Fairley, M.A., Ph.D., professor of German.

The resignation of Dr. J. C. McLennan, occasioning as it does widespread regret, has closed an active career closely connected with the University of much significance. From the days when he was a young graduate he has always been a loyal son devoted to the service of his alma mater. As professor he built up a great department of physics in which by his persistent and successful research he won for himself world-wide recognition as a physicist; latterly as dean of the Graduate School he threw himself *con amore* into its development. Fortunately it is expected that each year he will be able to return to Toronto to deliver a short course of lectures, and it is hoped that he will continue to enrich the field of physics by his researches.

Dr. W. E. Willmott, of the Faculty of Dentristry, has won, during the few years in which it has been a part of the University, the respect of his associates for his helpful and kindly spirit.

At the close of the session Professor Barker Fairley resigned his chair of German in University College, after a service of seventeen years, to accept the professorship of German in Manchester University. The departure of this fine scholar and teacher is a severe loss to the departments of modern languages, and a cause of deep regret to his colleagues.

The following retired:

Alexander Primrose, C.B., M.B., C.M. (Edin.), LL.D., Dean of the Faculty of Medicine; Frederick Tracy, B.A., Ph.D., LL.D., professor of ethics.

The retirement on December 30th, 1931, of Dr. Primrose from the deanship of the Faculty of Medicine, brought to its conclusion an active career of forty-four years in that faculty. Clear and skilful as a teacher of anatomy, judicious as a professor of surgery, wise and considerate as a dean, Dr. Primrose carries with him the warm regard of a united faculty and the thorough respect of his colleagues on the University staff.

Professor F. Tracy, who, having reached the age limit, retired from the chair of ethics in University College, served the University for forty years, first in the department of philosophy and later in that of ethics. A clear teacher, a man of the highest character and reliable judgment, he has won the regard of generations of students and professors, and of a wide constituency through his publications.

Leave of absence was granted to the following:

St. Elme de Champ, B.ès L. (Lyons), associate professor of French; Walter Scott Guest, B.A.Sc., assistant professor of electrical engineering, on account of ill-health; John Davidson Ketchum, M.A., lecturer in psychology, for the Eastern Term to study abroad.

The following new appointments and promotions were made during the year:

In the Faculty of Arts—Appointments: C. Roland Wason, B.A. (Camb.), assistant professor of history of industrial art; Miss C. C. Krieger, M.A., Ph.D., lecturer in mathematics; G. de B. Robinson, B.A., Ph.D. (Camb.), lecturer in mathematics; Miss M. E. G. Waddell, M.A., lecturer in mathematics; Miss J. W. Brown, B.Sc., Ph.D. (Lond.), lecturer in micro-analysis; F. E. Beamish, M.A. (McM.), lecturer in chemistry; R. M. Saunders, Ph.D. (Cornell), lecturer in history; A. E. Grauer, B.A. (B.C.; Ox.), Ph.D. (Cal.), lecturer in political economy; K. S. Bernhardt, M.A., lecturer in psychology; C. R. Myers, M.A., lecturer in psychology; D. J. Wilson, M.A., lecturer in psychology; K. H. Rogers, M.A., lecturer in psychology; M. St. A. Woodside, B.A. (Tor.; Ox.), lecturer in classics; Miss I. G. Galthazard, M.A., lecturer in French; Miss M. MacDonald, B.A. (Laval), Dip. de l'U. (Paris), lecturer in French.

Promotions: W. S. Ferguson from a lectureship to a professorship in accounting in political science; E. A. Dale, M.A. (Ox.), from an associate-professorship to a professorship in Latin; N. E. Sheppard, M.A., from an assistant-professorship to an associate-professorship in mathematics; A. Brady, B.A. (Ox.), M.A., Ph.D., from an assistant-professorship to an associate-professorship in political economy; S. N. F. Chant, M.A., from an assistant-professorship to an associate-professorship in psychology; F. R. Crocombe, M.A. (Camb.), from a lectureship to an assistant-professorship in policital economy; E. W. Macdonald, B.A. (Qu.), from a lectureship to an assistant-professorship in philosophy; E. K. Brown, B.A., from a lectureship to an assistant-professorship in English; R. D. C. Finch, B.A., from a lectureship to an assistant-professorship in French.

In the Faculty of Medicine—Appointments: J. G. FitzGerald, M.D., LL.D., (Qu.), dean of the faculty of medicine; E. S. Ryerson, M.D., C.M., assistant dean of the faculty of medicine; J. H. Elliott, M.B., professor of history of medicine; G. Shanks, B.A., M.D., C.M. (McG.), assistant professor of pathology and bacteriology; R. K. George, B.A., M.B., D.P.H., lecturer in anatomy; T. H. Belt, M.B., B.Sc. (med.), lecturer in pathology; I. H. Erb, M.B., lecturer in pathology; Miss R. M. Price, M.B., lecturer in bacteriology.

Promotions: H. D. Kay, Ph.D. (Camb.), D.Sc. (Manch.), from an associate professorship to a professorship in biochemistry; N. B. Taylor, M.B., from an associate-professorship to a professorship in physiology; E. A. Linell, M.B., Ch.B., M.D. (Manch.), from an associate-professorship to a professorship in neuropathology; P. J. Moloney, M.A., Ph.D., from an assistant-professorship to an associate-professorship in hygiene; R. G. Armour, B.A., M.B., from a senior demonstratorship to an associateship in medicine; the following from senior demonstratorships to associateships in surgery: R. E. Gaby, B.A., M.D., R. I. Harris, M.B.; R. Pearse, H. W. Wookey, M.B.; F. F. Tisdall, M.D., from a senior demonstratorship to an associateship in paediatrics.

In the Faculty of Applied Science—Appointments: W. E. Carswell, B.Arch., lecturer in architecture; J. J. Spence, lecturer in engineering drawing.

Promotions: E. A. Allcut, M.Sc. (Birm.), M.E. (Tor.), from an associate-professorship to a professorship in mechanical engineering; W. J. T. Wright, B.A.Sc., from an assistant-professorship to an associate-professorship in engineering drawing; K. B. Jackson, B.A.Sc., from a lectureship to an assistant-professorship in engineering physics; R. R. McLaughlin, M.A.Sc., M.A., Ph.D., from a lectureship to an assistant-professorship in chemical engineering.

In the Faculty of Household Science—Promotions: Miss C. F. Valentine, M.A., from a lectureship to an assistant-professorship in household science.

In the Ontario College of Education—Appointments: J. L. Gill, B.A., instructor in English and history in the University Schools; R. F. S. Baird, B.A., (Qu.), teacher-librarian in the University Schools.

Promotions: J. O. Carlisle, M.A., from an associate-professorship to a professorship in methods in classics; W. E. Macpherson, B.A., LL.B. (Qu.), from an associate-professorship to a professorship in history of education; B. C. Diltz, M.A. (Qu.), from an instructorship to an assistant-professorship in methods in English and history.

In the Faculty of Dentistry—Appointments: R. G. Ellis, B.D.S. (Adelaide), D.D.S., B.Sc. (Dent.), associate in prosthetic dentistry; R. G. McLean, D.D.S., associate in dentistry.

Promotions: F. M. Lott, D.D.S., B.Sc. (Dent.), from an associate-professorship to a professorship in prosthetic dentistry; G. C. Cameron, M.D., from an associateship to a professorship in dental pathology; the following from demonstratorships to associateships in dentistry: G. D. Beierl, D.D.S. (Mich.), F. L. Cole, D.D.S.; J. H. Duff, D.D.S.; W. T. Holmes, D.D.S.; W. L. Hugill, D.D.S.; G. V. Morton, D.D.S.; J. M. Sheldon, D.D.S., R. R. Walker, D.D.S.; R. S. Woollatt, D.D.S.; J. H. Johnson, from an instructorship to an associateship in dental surgery and anaesthesia; C. H. M. Williams, D.D.S., B.Sc. (Dent.), from an instructorship to an associateship in periodontia.

The prevailing depression has left its mark upon the life of the University, but in this respect it has only been sharing an experience similar to that of educational institutions in all countries. It is to be hoped that there will be no real retrogression in this period of contrary winds, and that anchors will be thrown out so that ground may not be permanently lost, and that, in the coming recovery in our national affairs, the University will be so placed as to occupy more completely its opportunity for leadership in the intellectual life of this country. The strategic position of the University of Toronto is obvious, its financial outlook, supported as it is by this rich province, is assured, and its constituency unsurpassed.

Though the attendance was larger than ever before, very many undergraduates found the greatest difficulty in struggling through to the end under a burden far heavier than in former years, because the opportunities of employment in the preceding summer had been fewer, and their families were often less able to lend aid. In the case, however, of some whose home was in the city the very fact of unemployment may have been the cause of their attendance at the University. Not a few who would otherwise have had to abandon their year were helped through by members of the University staff, an evidence of the real sympathy that so often exists between teacher and student. I must also express my admiration for the spirit in which the staff has accepted the temporary reduction in salary, and for the willing way in which members have, where it has been necessary, undertaken extra duties at a time when the work of the University was heavier than in normal years.

This year was the first in which the University put into effect the requirement of honour matriculation for entrance into arts. It resulted, naturally, in a diminution of numbers, though not so large as was expected; but the results have so far justified our hopes that the quality of work done in the first year would be improved. The failures in the first year were only 19.4 per cent., while those of students in the second year of the former course, who were doing the same work but had entered on the lower basis, were 31.5 per cent. If this is maintained it will mean that the quality of the pass degree at the end of the three years will be better than that of the former degree at the end of four years.

It seems probable that the limit has been almost reached of the length of time that can be devoted to the attainment of undergraduate, professional and postgraduate degrees. Such improvements as may be made in their character will consist in rearrangements of subjects and possibly in changes as to some teaching methods. I do not look for any great advance in higher education by any material change within the University. But for some years I have been of the opinion that its quality would be improved, and possibly the professional and postgraduate periods shortened, if the University were to receive a more fully developed student than it does now. Education even in the professional faculties depends upon the selection and quality, not the amount, of information in each field. And a student whose mind at the age of nineteen, has been matured by thorough teaching in language, literature, history and science, will go much faster and farther than the average student who enters the University on our present standards. It seems to me, therefore, that the next educational advance should come in the schools, so that by earlier selective and intensive methods, those boys and girls who are hoping to attend the University would be able to accomplish a grade of work and acquire a mental habit, which, at the same age as that of the present average entrant, would ensure them better final results in a shorter time. I have, therefore, read with satisfaction an announcement by the Prime Minister to the effect that the Government is considering the establishment of a new type of school for the ages between twelve and fourteen, in which presumably a differentiation would be made leading to the accomplishment of some such result as I have outlined. The devolution on well-equipped Collegiate Institutes of more advanced work would react favourably also on the teaching profession, by appealing to its ambition, and attracting to it a larger number of the most highly trained arts graduates.

Principal M. W. Wallace refers to the action taken by the Governors in raising fees in Arts. Unfortunately, owing to present financial difficulties, they found it necessary to take this step, though at the same time they are making provision to give some relief in the case of persons upon whom the increase will bear with distress. Even with this increase our fees are among the lowest in Arts in the Dominion, and most other institutions have been compelled to do likewise. The intellectual and social condition of the College is healthy, though at the close of the session it has lost two of its esteemed professors, Dr. Tracy and Dr. Barker Fairley.

Dr. J. G. FitzGerald, who on January 1, 1932, succeeded Dr. Primrose as dean of the Faculty of Medicine, will maintain and increase the best traditions of the Faculty. In order that the duties of his new office should not interfere seriously with his work as director of the School of Hygiene, which he created and has promoted with originality and success. Dr. E. Stanley Ryerson has been appointed assistant dean. His efficiency and his experience have been tested for several years, and the combined direction of the dean and assistant dean will redound to the advantage of the Faculty.

The question of the limitation of the number of those who may be permitted to enter this Faculty has received much serious attention during the session. It is an old one, and hitherto a final answer has not been given to it. The difficulty has been met in the past by raising the standards, but as they are now the same as those for an honour science course in Arts, and numbers are again increasing rapidly, while our clinical facilties are at a standstill, the problem arises again in an acute form. Limitation of some kind seems inevitable. Already five medical colleges in Canada have fixed a quota. In the dean's report the urgency of the problem and a method of solving it are set forth.

The most important development in the Faculty has been the creation of a division of Neuropathology in the department of pathology under Dr. Klotz. Dr. Linell has been appointed professor of neuropathology. The departments of medicine, surgery and psychiatry are co-operating to the full, and with the hearty support of the Department of Public Health it is believed that results of great importance will soon be manifest.

In the Faculty of Applied Science the attendance has been the largest in its history and pressure on space has become very serious. A careful report on urgent and imminent requirements made by a special committee of the staff has been presented to the Governors. The extension of the building for mining and ore dressing has both relieved pressure in that department and given a great impetus to its work.

From the College of Education also comes word of an increase, almost too great, in attendance, which is in part the result of the present difficult conditions in regard to employment. This should mean that during the next quinquennium not only will there be no dearth of teachers, but that the schools will be served by a higher quality. New avenues of work are opening out before the College, and educational research is being conducted into the methods of teaching school children a language other than their vernacular.

When, twenty-four years ago, the sod was turned by Mrs. Lillian Massey Treble for the erection of the sumptuous Household Science Building, the generous plans, which she had carried out, were expected to suffice for at least a generation; but the hopes of those who inaugurated this new field of higher education for women have been far outrun, and the class-rooms and laboratories have become congested. Students have for years been coming from all parts of Canada and beyond, but of late many more young women from this province have been taking up a life work for the provision of which this University was among the pioneers.

The School of Graduate Studies has continued to grow rapidly both in numbers and in the variety of the branches of study, and it has become one of the major departments of the University. It continues to draw many from other universities. Of the 675 students registered last year, only 368 took their first degree in the University of Toronto, the rest coming from 60 different institutions. In this School a deep-felt intellectual need in Canada is being provided for, and it would be a serious set back to our higher culture were its progress to be crippled by inadequate facilities in library and laboratories or by an insufficient staff.

In the Faculty of Dentistry there has been organized, through the support of the Canadian National Institute for the Blind and the voluntary service of a number of graduates of the faculty, the Johnston Dental Clinic for the Blind, in which hundreds of those who are handicapped by the impairment or loss of sight have received treatment.

The work of the Extension Department has expanded rapidly in recent years; and by experience the director has been discovering what may and what may not be properly undertaken in the way of instruction or education by a university, as well as new fields that emerge from time to time. This year that of broadcasting has been entered, and it promises to be most fruitful. A series of forty radio talks on scientific, literary and historical subjects was given by university professors during a period of eight weeks, and these talks were received with much favour by the public. Other Canadian universities have made use of this most recent means of disseminating knowledge, and there is good reason for hoping that, as a result of the gratifying radio policy of the Federal Government, it will soon become a very important agency in university extension work.

In Social Science the numbers have increased almost beyond the capacity of the staff to give the needed instruction and oversight, and since the demand for employment is greater than the salaried positions available, it has been decided to limit the number for next year to eighty.

The Department of Public Health Nursing seems to be on the way to realizing much more fully than hitherto its hopes and aims for dealing with many of the problems of nursing education, which of late have become much more urgent.

We are extremely fortunate in the character of our Health Services both for men and women, and as usual I report that the health of the undergraduates has been good. Their athletic activities also are in a sound condition. While there has not been of late anything spectacular, the University stood well last year in inter-collegiate sport. It is a matter for much satisfaction that such sane influences have for years prevailed in athletics. They have been directed by men of the finest character, and graduates have co-operated with undergraduates in keeping their standards high. In spite of continued handicaps the athletics of the women students have contributed to their general healthfulness.

During the session the Royal Ontario Museums have been receiving as usual many valuable accessions, but the work of the staff has been extremely heavy because of the transfer into the new galleries and the renovation of the old. When this is complete the public will be able to realize what mangificent collections exist in this community, and the new structure will be worthy of what it contains.

A factor in my regret on leaving the University has been my inability to effect the establishment of departments of geography and of the fine arts, including larger provision for the study of music by undergraduates. From the Governors I have always had sympathetic support for such developments. Geography, it is true, has for years been partially provided for in geology and economics, but there is need of an independent department in which it will become in its wider phases a more comprehensive subject for study and investigation, and this requires well-appointed quarters and a geographer of special training. In the Museum of Archaeology the University possesses invaluable resources available for the development of a School of the Fine Arts, but this discipline also needs for successful results, in addition to space and equipment, teachers with an unusual combination of gifts. I hope that it will not be long until, probably with private support, both the fine arts, technically so-called, and music will hold a more adequate place in the University than they do at present. Of course we have in the Conservatory of Music an institution of which we may well be proud, and on our faculty of music musicians of world-wide reputation, but the influences that flow from that centre do not directly reach the undergraduate, except through the special musical recitals which have in recent years been generously arranged by Dr. MacMillan. Indirectly, however, through the efforts of the Warden of Hart House the goodwill of the leading musicians and other artists of the city has been enlisted to make it a powerful source for disseminating taste for the fine arts among the men students of the

University. To these artists, who have voluntarily given of their best towards developing these phases of culture among the undergraduates, the University is under a deep debt of gratitude.

It is an especial pleasure that before the close of the academic year the new Botanical Building, so patiently hoped for and so splendidly realized, was formally opened in the presence of a distinguished gathering including a number of eminent botanists from Britain, the United States and Canada. Dr. Seward, professor of botany in Cambridge, and a former Vice-chancellor, delivered a lecture and took part in scientific conferences on that occasion. The building, so adequately equipped, affords special opportunities for the staff to take a forward step in botanical science.

Extensions to the Hygiene Building, to be completed in the autumn, have been made during the year. The larger portion of these has been made possible through the application to this purpose of the surplus earnings of the Connaught Laboratories. Another magnificent grant from the Rockefeller Foundation bringing the total of their endowment of the School of Hygiene to $850,000, and an additional annual grant from the Government, have made good the loss in revenue from the application of the surplus to building, so that the work of the School, already so widely and favourably known, will be largely expanded, to the benefit of the province and the Dominion, and to the promotion of preventive medicine.

Not the least hopeful element in the university situation is the deep interest that has been taken in it by many who have shown that interest by benefactions large and small. Though successive legislatures have responded generously to the requests of the Board of Governors for annual support and for buildings, the University could not to-day be in such an enviable condition in many respects, had it not been for the varied and often magnificent gifts that have been made to it. During the past twenty-five years those received by the Governors have amounted to over seven million dollars, while the federated universities have also been recipients of large gifts. Indirectly but none the less really its expansion has been furthered by the enlargement and equipment of the Toronto General and other hospitals, and by the great acquisitions of the Royal Ontario Museums. It is not too much to say that the quality of the education given in the University has been sensibly influenced by its benefactions.

While this has been most obvious in the Faculty of Medicine, the impulse from them has been felt in other faculties in a heightened devotion to scholarship and research. Lesser gifts have led to the promotion of postgraduate study and the attraction to Toronto of graduates from other Canadian universities. The most recent splendid benefaction, that of Mrs. D. A. Dunlap, for the provision of an observatory with a telescope that will rank among the greatest in the world, will afford an additional stimulus to pure science.

On the social side of the students' life, a most important part of their education, the cultural effect of the epoch-making gift of Hart House has been manifest, and among the women that of such buildings as Whitney Hall and the residences in the federated universities. On the side of physical training, the adequate equipment for men, and such inadequate equipment as exists for women, are both due in the main to private benefaction, or to graduate or undergraduate effort.

When therefore attention is drawn to the cost of this provincial University to the people of the province through their Legislature, a cost, it must be borne in mind, which is moderate proportionally to that of comparable institutions, it should also be remembered that the high quality of education which the University offers to the young men and women of Ontario, is in no small measure due to private benefactions, and besides, that the munificence of these benefactions testifies to the respect in which the University is held by the community at large and by great Foundations in the United States.

This is the place to recall again, as I must, the extremely difficult, in fact serious, condition that exists in the Library. If its efficiency is crippled and its use hampered by congestion and lack of facilities, the welfare of the whole University will suffer. As far as it goes it is a good day to day library, in some departments indeed excellent, possessing, for example, "the largest collection of scientific and scholarly serials in Canada"; but, though its resources are used economically and effectively, it is the most over-worked organ in the academic body, and relief for it is among the most urgent necessities in the University. No reasonable advance can be made in research in most departments nor in post-graduate study unless the library is enlarged. It is hardly too much to say that otherwise Toronto's academic reputation will suffer. A benefactor who would do what is needed to give the Library its proper place would always be remembered among those who will have strengthened the University most vitally.

During the year the University has received the following benefactions, totalling $121,769.02:

From the Eaton endowment, $25,000; University College Alumnae Association, towards furnishings of Whitney Hall, $25,000; Rockefeller Foundation, for child research and parent education, plus premium, $21,281.25; Carnegie Corporation, educational research, plus premium, $11,275; Rockefeller Foundation, paediatrics, plus premium, $8,025; Graham Campbell, Esq., Maurice Hutton Scholarship, $5,000; University of Toronto Engineering Society, $3,878.25; Canadian National Committee on Mental Hygiene, Psychiatry, $2,800; Mrs. Jessie M. Stewart, medical research, $2,500; Flavelle-Peacock Lectureship: Sir Joseph Flavelle, $1,250, E. R. Peacock, Esq., $1,250; Graduate Fellowships: Sir Joseph Flavelle, $1,000, Estate of the late Sir Edward Kemp, $500, Imperial Oil Limited, $500, The Robert Simpson Company, $500; J. H. Gundy, Esq., William E. Wilder Fellowship, $1,500; Estate of the late Col. H. J. Grasett, Grasett Memorial Scholarship in Classics, $1,250; Community Welfare Council of Ontario, Social Science Scholarships, $800, Anonymous scholarship for Social Service, $400; D. A. Dunlap Memorial Scholarship, $1,000; Faculty of Dentistry: Ash Temple Scholarship, $250, Ontario Dental Association Fellowship, $250, J. B. Willmott Scholarship, $250; Randolph Crowe, Esq., Empire Travelling Fellowship, $650; Robert Bruce Scholarship, $503.71; Gertrud Davis Fellowship, $500; Botanical Research: Consolidated Mining and Smelting Company of Canada, Limited, $400, Star Printing and Publishing Company, $400; E. C. Whitney bequest, $498.96; Robert Simpson Company Scholarship, $350; Sir Edmund Walker Scholarship, $300; University College Alumni Scholarship, $300; Library Psychology Fund, $428.75; Rev. Dr. H. J. Cody: H. J. Cody Matriculation Scholarship, $125, Maurice Cody Memorial Scholarships, $100; Mrs. H. J. Cody: Maurice Cody Matriculation Scholarship, $125, Maurice Cody Memorial Scholarship, $75; University Schools Scholarships: Sir John Eaton

Memorial, $120, Hon. N. W. Rowell, Langford-Rowell Scholarship, $100; McCaul Scholarship: Professor G. O. Smith, $42.50, A. M. Stewart, Esq., $37.50, Dr. Maurice Hutton, $37.50; Delta Phi Epsilon Scholarship, and premium, $110.50; J. J. Gibson Matriculation Scholarship, $100; University College Alumnae Scholarship, $100; Darling and Pearson Prize in architecture, $100; A. H. Jarvis Bursaries, $100; St. Margaret's College Alumnae Scholarship, $75; S. Temple Blackwood, Esq., Maurice Hutton Scholarship, $50; Mathematics Scholarship: Professors Beatty and Pounder, $50; Hon. Charles McCrea for Dent McCrea Scholarship, $50; Hon. N. W. Rowell for Langford-Rowell Scholarship in Law, $50; Dr. R. A. Reeve Prize, $50; B.A.A.S. Fund for prize books, $27.30; Engineering Institute of Canada Prize, $25; Ontario Medical Association Prize, $25; St. Margaret's College Old Girls Association, Florence M. Neelands Prize, $15; Professor G. O. Smith, Fletcher-Johnston Memorial Prize in Latin, $20; University College Alumnae Prize in English, $10; Squair French Library Fund, $7.80; Boiler Inspection and Insurance Company Scholarship in mechanical engineering, $150; Ontario Association of Architects Scholarship, $100.

During the session the following special lectures were delivered: On the Marfleet Foundation, a course of three lectures by Professor J. T. Shotwell, department of history, Columbia University, on "The Foreign Relations of the United States"; on the Alexander Foundation, a course of four lectures by Sir William Craigie, professor of English, University of Chicago, on "The Northern Element in English Literature"; three lectures by Professor Willem de Sitter, department of astronomy and director of the observatory, University of Leyden, two on "Measuring the Size of the Universe," and one on "The Rotation of the Earth"; four lectures by Professor Richard Woltereck, Zoological Institute, University of Leipzig, on "The Problem of Racial Differentiation of Organisms in Lakes," "Present Trends of Limnology and Marine Biology in Europe," "Stratification, Vertical Movement and Shape in Pelagic Organisms," "The Study of Life in Fresh Water Lakes"; a lecture by Dr. L. P. Jacks, University of Oxford and editor of the "Hibbert Journal," on "Leisure, a World Problem"; a lecture by Professor H. L. Stewart, Dalhousie University, on "Bentham: A Centenary Retrospect"; three lectures by Professor P. Debye, University of Leipzig, on "The Fine Structure of Rayleigh Scattering," "Recent Experiments on Electrolytes in connection with Inter-ionic Attraction Theory," "Microscopy of Molecules"; a lecture by Professor Jean Escarra of the Faculty of Law, University of Paris, on "The new Legal System of the Chinese Republic"; two lectures by Professor Friedrich von der Leyen, University of Cologne, on "Goethe and his Times"; a lecture by Professor G. E. Coghill, The Wistar Institute of Anatomy and Biology, on "Sensitivity, Inhibition, Posture and Progression"; the Lister Lecture by Dr. Rudolph Matas, Tulane University, on "The Story of Postoperative Pulmonary Embolism, Before and After Lister"; a lecture by Professor A. C. Seward, Master of Downing College, Cambridge, on "Plant Life through the Ages."

The American Psychological Association held a very successful and well-attended meeting at the University of Toronto, September 10-12.

In February a programme was arranged by the staff in German of the University of Toronto with the co-operation of the Director of Hart House Theatre to mark the hundredth anniversary of the death of Goethe, as follows: Two lectures on "Goethe and his Time" by Professor Friederich von der Leyen of the University of Cologne; a lecture on "Faust" by Professor C. Lewis; a lecture on "Goethe's Place in the History of Science" by Professor G. S. Brett; a song recital by Hans Merx of Goethe's lyrics set to music by famous composers; Goethe's drama "Faust" performed in English at Hart House Theatre during the week of February 22.

A special convocation was held in April when the honorary degree of Doctor of Laws was conferred upon Lord Irwin, G.C.S.I., who at the same time inaugurated the Massey Lectureship, taking as his subject "Some Aspects of the Indian Problem."

The University of Toronto shares in the honour which His Majesty the King of Italy conferred upon Professor E. Goggio by investing him with the title of "Cavaliere della Corona d'Italia." Professor M. A. Buchanan has been honoured by being elected President of the Modern Language Association of America. Professor C. T. Currelly has been made a Fellow of the Society of Antiquaries, a well-earned distinction.

On reviewing the University as a whole I feel confidence in saying that since the war a marked change has been coming over its life. The quality of its teaching and standards has been rising steadily, and the spirit which is distinctive of universities of the first order has been intensified. This is shown not merely in the increasing lists, in my annual reports, of fundamental or applied researches, and of published articles or works of importance, but in the aims and standards of undergraduate, professional and postgraduate education which are consciously pursued by the faculties. This spirit has been strengthened by the annual additions made to the staff of young men, many of them our own distinguished graduates, who have had the advantage of advanced study in some of the greatest universities of the world. It is heightened also by the privilege, availed of by not a few, of spending their periodic leave of absence for a year, or a portion of it, abroad, where they refresh their powers by meeting again the leaders of thought in their own subject. I regard these larger opportunities and the annual conferences at meetings of learned societies as important contributory factors to the higher life of the university. Similar effects result from the brief visits to Toronto each session of a large number of scholars and scientists from all parts of the academic world, who stimulate their colleagues by their intimate intercourse, not less than they do the university public at large by their lectures. Toronto is situated so conveniently on the great routes of travel, that the University is able, at comparatively small expense, to bring visitors from the leading academic centres of this continent, and often to share with those universities in the visits of European professors.

In closing my twenty-fifth and final report as President to the Governors and to the Senate, I wish to express to the teaching and administrative staffs of the University my deep gratitude for their constant co-operation with and uniform kindness towards me, and to the Governors and the members of the Senate my heartiest thanks for the support they have given to me in my endeavours and for their forbearance with me in my shortcomings.

All of which is respectfully submitted.

(Signed) R. A. Falconer,
President.

October 13th, 1932.

REPORT OF THE PRINCIPAL OF UNIVERSITY COLLEGE

Professor M. W. Wallace, M.A., Ph.D.

I have the honour to submit to you the following report on the activities of University College during the academic year, 1931-1932:

The past session has been a difficult one for many of our students on account of the prevailing economic stress. Some of them have been compelled to leave college, and many have carried on their work in most distressing conditions. Many more will probably be unable to return to college next year, and under these circumstances it seems to me most unfortunate that the Governors have found it necessary to increase the tuition fees. The setting aside of a considerable proportion of the increased revenue for bursaries will do a great deal, however, to alleviate the worst cases of distress among our best students. It is a sad sight to see students of first-rate ability compelled to leave college, and to seek for employment in a world which for the present seems incapable of making use of their services. Our graduates are many of them finding the greatest difficulty in securing employment.

Whitney Hall was opened with appropriate celebrations in September last, and already it is difficult to realize that there was a time when we were able to carry on the work of the college with only make-shift accommodation for the women students. In a hundred ways the beautiful new residences have contributed toward their comfort and to the enrichment of their college experience. They are most appreciative of their opportunities and proud of their common home. The Alumnae have continued their interest in the new buildings, and have voted a large sum of money to purchase books for the residence library. It is hoped that not only will most of the books required in the various courses be made easily available to the residents, but that a generous provision will be made of the works of standard and contemporary authors. The college is once more under great obligation to the generosity of our Alumnae Association.

The Alexander Lectures were delivered in Hart House Theatre during the month of February by Sir William Craigie, formerly editor of the Oxford English Dictionary, and at present professor of English in the University of Chicago. Professor Craigie gave us a most scholarly and interesting series of four lectures on "The Northern Element in English Literature." The Alexander Lectureship brings to the University each year a scholar of international reputation, and makes a very real contribution to the intellectual life of both the staff and the student body. During next session the lectures will be given by Professor Grierson, professor of English in the University of Edinburgh, on "The Life and Work of Sir Walter Scott."

The German Exchange Fellow on the Gertrud Davis Foundation for next year will be Miss E. B. Burton, daughter of Professor Burton of the department of physics. Miss Burton will continue her studies in German and music at the University of Frankfort. Mr. Werner von Gruenan has spent this year with us as the German Fellow on the foundation.

Two of the older members of the college staff leave us at the end of the present session—Professor F. Tracy, professor of ethics, and Professor Barker

Fairley, associate professor of German. Professor Tracy retires after a life-time of service in this University and college. His reputation as a great scholar in his own field is world-wide, and a multitude of students during the last forty years have come under the influence of his charm and persuasiveness as a teacher. Professor Fairley joined our staff just seventeen years ago, and leaves us to accept the chair of German in the University of Manchester. Of his scholarship I need say nothing beyond the fact, that his recent volume on Goethe has been most generously reviewed in all the scholarly periodicals, and generally recognized as the most significant contribution to Goethe literature in this centenary year. Through his interest in painting, and in literature in the broadest sense of the word, Professor Fairley was in close touch with all the foremost Canadian representatives of the arts and of letters. His colleagues greatly deplore his decision to leave University College.

From many books and articles published during the year by members of the staff, I would mention especially Professor Gilbert Norwood's *History of Greek Comedy*, and a volume of *Studies in English* by various members of the English staff, both of which have been very well received by scholarly critics.

A course of public lectures was given by members of the staff in the West Hall for several weeks during the winter.

I have to record the sudden and untimely death of Professor Grant Brown, who resigned his chair in ancient history three years ago.

DISTRIBUTION OF THE STAFF OF THE UNIVERSITY AND UNIVERSITY COLLEGE:

REGISTRATION OF STUDENTS BY FACULTIES AND YEARS:

The number of students registered in the university, in colleges and faculties, in the session 1931-32, was 7,653, distributed as follows:

				Men	Women	Total
Faculty of Arts				2,190	1,680	3,870
University of Toronto	533	248	781			
University College	887	644	1,531			
Victoria College	437	519	956			
Trinity College	170	146	316			
St. Michael's College	169	129	298			
Registered twice	6	6	12			
Faculty of Medicine				772	74	846
Faculty of Applied Science and Engineering				879	5	884
Faculty of Household Science				...	179	179
Ontario College of Education				497	429	926
Faculty of Forestry				68	...	68
Faculty of Music				23	16	39
School of Graduate Studies				482	175	657
Faculty of Dentistry				195	30	225
Registered twice				22	19	41
				5,084	2,569	7,653

In departments there were registered 435, distributed as follows:

	Men	Women	Total
Department of Social Science	15	120	135
Department of Public Health Nursing	...	228	228
University Extension (Occupational Therapy)	...	32	32
University Extension (Course for Graduate Nurses)	...	20	20
University Extension (Physiotherapy)	...	20	20
	15	420	435

The grand total of registration for the whole university was 8,088, of whom 4,855 were men and 2,989 were women.

In addition there were 4,482 persons registered in the Department of University Extension in courses and at provincial centres.

DEPARTMENTS

The numbers examined in the different departments of the University, including those persons granted standing for military service, were as follows:

Arts:		
Fourth Year	605	
Third Year	851	
Second Year	811	
First Year	929	
Teachers' Course	392	
Graduates (Specialist Standing)	49	
		3,637
Medicine:

AUDITOR'S CERTIFICATE

Toronto, 31st October, 1932.

To the Governors of the University of Toronto:

GENTLEMEN:

I have verified the attached Balance Sheet of the University, dated 30th June, 1932, and Schedules 1 to 10, and report that all the transactions of the year on both Revenue and Capital Account have been duly audited and found correct.

The securities representing your investments are held for safekeeping by your bankers, The Canadian Bank of Commerce, and were produced by the bank for my examination on September 22nd and 23rd, 1932, and found to be in agreement with the records kept by the Bursar. Your securities consist largely of bonds issued or guaranteed by the Dominion Government and Province of Ontario and of Ontario municipal debentures. Notwithstanding the high class of these securities their market value at 30th June, 1932, was $382,966 less than their cost but at 31st October this deficiency in market value had been reduced to $9,027.00. As the bulk of your securities are held until maturity the present deficiency in market value does not indicate any probability of eventual loss provided the bonds do not fall into default in respect of either interest or principal.

The Bursar's records are well kept and all endowment and trust funds are properly accounted for.

Yours faithfully,

E. C. CLARKSON,
Auditor.

FINANCIAL STATEMENT

Balance Sheet, 30th June, 1932

FUNDS AND LIABILITIES

General Endowment	Schedule 1	$11,746,323 22
